WE ♥ STARCRAFT

'VE BEEN WORKING with Blizzard for several months to get StarCraft II: Wings of Liberty for our cover and it's finally here. I'm really bloody chuffed we got it as a world exclusive. In fact, I was so very excited I peed my pants a little! (Too much information?)

And then things got even better. Not only were we going to be the first PC mag with the single-player campaign reveal, Blizzard were actually going to fly us over to their HQ in Irvine, California to see it! With anticipation so high for this game I couldn't wait to hear back from Log when he returned from the US, and I wasn't disappointed.

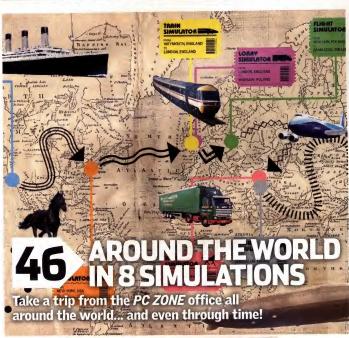

Along with the incredible Ghost cover art Blizzard sourced for us, we were also given the final Wings of Liberty logo to unveil for the very first time; I guarantee you won't have seen this anywhere else. Plus, Rob Pardo - the head honcho at Blizzard - dropped by to have a chat while Log was in Irvine. Turn to page 60 to find out his explanation for why we've had to wait for so long for the single-player campaign reveal.

Before I get into trouble for gushing too much, it appears I've acquired some sort of stalker judging by a series of emails from one of our readers. At first I was slightly offended, now they're just a bit funny, and I'm looking forward to the inevitable next instalment arriving in my inbox tomorrow!

KING OF LETTERS

CRY NOOB

I would like to express a view to your magazine readers regarding that awful name "noob". I've tried lots of online games, including FPSs and MMOs. The main difference I find is the attitude of the other players to what a noob is. In most FPSs a noob is a derogatory title and gets a lot of abuse, insults and usually gets kicked. In MMOs a noob is helped to learn the game, given a little cash, advice or even walked through a few quests.

That is what keeps players coming back to games like World of Warcraft (currently on 13 million players). So I think that the noob screaming adrenaline junkies could learn something from us beardy, real ale drinking role-players. Maybe some of the players put off by the unhelpful noob bashers, will return to learn how to play and not be a noob.

Sean

I think it's about time we sorted ourselves a videogaming glossary

out then. I mean, it's simply a minefield. How are we supposed to know what to call each other in our virtual worlds if there's no hard and fast rule? I know! We could never use the word 'noob' again!

And if we're banning things, let's also ban "My bad". I hate it. Pointless and American. The same goes for "Whatever". Have a prize for allowing me to invent these new rules Sean! More next week.

DARK DAYS

First of all: awesome magazine!

Second of all, I was wondering if you could cover a game that's been out since 13 July? The name of the game is called

Darkfall, it's an MMO. At first when it came out it was called vapourware and I think a lot of gamers from England, and some of your Irish readers (like me) would be interested in it now.

Since it came out Aventurine have put out updates and set up a new server for North America, but loads of people still remain on their first server (the European one).

As for myself, I can no longer play the game, but I was hoping a qualified gaming magazine like yourselves would be able to cover it and show people how much progress the game as made.

They lost loads of people because of the glitches but a good friend of mine still plays it and said it has improved. But I would have liked to see a review of it, as I'm sure loads of people in England would.

Kenneth

I'm familiar with Darkfall and if we were to review it we'd have to play it for some time to give it a fair crack.

We've loads of other games to play right now, but I've been hunting for a freelancer brave enough to take on the challenge. Watch this space!

MOVIE MAGIC

Can you please make someone re-release all of the old interactive movie games that I used to love playing on the PC as I miss them all dearly?

I know they weren't particularly popular and probably cost a few quid to make, but I really loved them. They had a unique charm, especially Phantasmagoria, Gabriel Knight: The Beast Within and the Tex Murphy games. It would be a dream if they'd start re-releasing them to work on today's operating systems.

"Can you please make someone rerelease interactive movie games?"

While you're at it, make them release some new interactive movie games too. Edae

It seems that we have magic powers Edge, as we have indeed spoken to the god of videogames and he has listened to our plea! In fact, in last month's Budget section (211) we reviewed Under A Killing Moon and in this issue there's Tex Murphy: Overseer and The Pandora Directive - all of which are available for about £6 from Good Old Games (gog.com). However, the others you mention still aren't available to buy (virtually none of Sierra's games are on GOG or Steam yet).

BFH CODE FAIL

I am a subscriber of PC ZONE magazine and I have just tried to redeem my Battlefield Heroes code from issue 211 only to discover that the code is giving me them same items (trousers and boots) from the previous month and not the helmet and gloves for this month.

I have looked on both the PCZ forums and the Battlefield Heroes forums to see if any others have been affected and there appears to be a few. Can you tell me what you are going to do to rectify this problem? Thank you for any help you can provide with this. John

Some of you might have had the same problem as John, if so and you want to get the National Army's gloves and helmet from issue 211, instead of doubling up parts of your pseudo-Nazis outfit, you can go to the Battlefield Heroes forum and find the solution by typing this link into your browser: snipurl.com/newbfcode.

I'd always take the blame if something like this was our fault, but it wasn't. So there.

BUYER'S GUIDE

Looking at the Buyer's Guide I see that all genre specific games suggested are fairly diverse. Well, as diverse as you could be with genres such as sport games, MMOs and the like. But looking at the racing section I see what could be five screenshots from one game, so I suggest to you - spice it up! Add TrackMania United to the list!

Has there ever been a racing game with such excellent online and customisation capabilities? Graphics that a one-eyed pirate could stare himself blind at? Most importantly, it has gameplay

Adventure games have never really been my thing, but once I took the plunge and bought TGP I was hooked. How could a game with Hitler in it ever be bad, especially when he's riding a Nazi Robot Dinosaur? Genuinely witty and very, very funny, I don't think I've laughed so much at a game ever.

Everyone I've recommended it to has had a right laugh playing it, so I reckon everybody should get it. It's difficult though and I'm not that clever, so I had to check some walkthroughs occasionally. Best adventure ever? It's right up there, sure.

Unfortunately it only got 86% so doesn't qualify as a high enough scorer to push any of the other Racing games off the Buyer's Guide. And dems the rules.

A BOAT THAT ROCKS

PC ZONE, thank you for opening my eyes. I have always thought of mods as botched amateur levels, with poor textures, unimaginative level design and broken AI. I believed that playing a mod would detract from my enjoyment and memory of the original game. How wrong I was!

Excited by your coverage of Left 4 Dead 2 I became desperate for new Left 4 Dead content to play now. So on your recommendation in issue 211 a friend and I downloaded the L4D mod campaign Death Aboard.

It was incredible. The level design is on a par with any of Valve's official campaigns, while the finale is far better. It was easily the most enjoyable and tense two hours I have ever spent playing L4D.

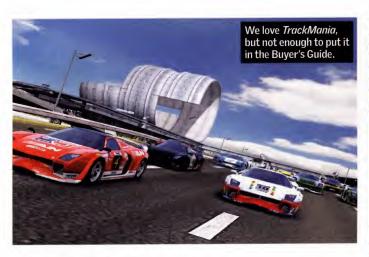

We're going to try Dead City tonight and I can't wait!

Paul Newrick

David's really hot on all the new mods and there's a load more L4D ones on page 95 too.

We want photos of you with PC ZONE in the most exotic or inappropriate locations. Candid celeb shots count double. Every one printed wins a prize!

AN ODE TO PC GAMING

Writing that subject tag reminded me of something completely unrelated that you may (though probably won't) be

interested to know, which is that I was once in a band called Buster Hymen & The Penetrators featuring The Rhythm Method. That was after I left Spasmodic Muscular Contractions In The Lower Abdominal

SERIAL KILLER

With the advent of digital downloads and clever copyright management wizardry, am I the only person lamenting the loss of serial keys? Not because I feel they're a better way to prevent piracy, but rather because I enjoyed dolefully tapping them in and the suspense between entering that last digit and hitting 'OK'. Is it a valid serial key? Did you mistake that 8 for a B? Was that a zero, or an O? The potential pitfalls made entering serial keys exhilarating.

That's not why I'm emailing though -I wanted to draw your attention to a particular 16-digit serial key I came across that had the word A-R-5-E in it. I was wondering if any of your readers -have encountered words hidden within their serial keys, and if any of them were as rude as mine. Has anybody ever seen a C**T on the front of a CD?

Theresa Duffy

Does James Blunt count?

HEED THE SIGNS

In response to Theresa Duffy's letter (above), I've come across interesting serial keys in my time. I remember my World of Warcraft box had a doozy of a serial key, with the letters M-R-G-R printed clearly. Was this Blizzard's attempt to tell us all about the impending merger with Activision? If only I'd been more vigilant!

Simon Clegg

D'oh! Readers, if you have any interesting serial keys please send them in!

HAPPY READER

I had to put pen to paper (or rather fingers to keys) to express my enjoyment of the latest PC ZONE (Aliens vs Predator cover). I've been an avid reader for some time, and have seen a marked improvement since the magazine fell under your stewardship.

ANSWERED TODAY LIVE A LITTLE

DECADE-OLD MAILBAG,

I think the people who give games ratings are far too serious about their job. Games like the Grand Theft Auto can't be played by kids under 18. So

maybe Medal of Honor, Battlefield 1942 and many other good games are 15s, but there are some lovely games that are 18s such as Soldier Of Fortune II: Double

GTA: Vice City Not for kids.

Helix. The raters only have one good excuse for making them 18s, which is not encouraging young children to kill each other. But can you imagine a sixyear-old child shooting a Nazi? Anyway if a war breaks out we're going to see it all for real, so all games do is prepare us for the truth. See my idea doesn't sound so stupid now I've given you evidence.

When you wrote this in 2003 we were just surprised you'd called Soldier of Fortune II 'lovely', but I agree: there'll come a day when today's 18-rated games will seem wholesome.

I, like many, was initially circumspect about a female editor of such a maleorientated magazine. However you have maintained the high standard of editorial and, quite often, improved it. Please accept the most humble apologies for my initial caution.

It is with sincere hope that you remain at the helm for many years to come.

Addison DeWitt

Is that a pseudonym or do you really share a name with George Sanders in the movie All About Eve? Either way, thanks for this email, it made my day!

UPFROKITHANDS-ON

■ for not choosing the aggressive option on the way in and cracking his skull on the bar - clearly the writers want you to load up your saved game and try it out.

ADAPTIVE STORIES

The ultimate aim for Obsidian is to create a game that adapts to the choices you make, rather than reprimand you when you play the bad guy, leaving you with red-tinted superpowers but no friends. Both good and bad paths are equally valid, they both fit the character and the plot, and for the most part they deliver similar levels of reward.

"Paths" is the wrong word, as you don't carry around with you an overall morality score, instead you affect your reputation with individual characters, some of whom like being treated rough.

Obsidian are citing 120 hours of dialogue for a 30-hour game, indication that there will be replay value abound - or at the very least that important sense that the route you carve through the game is one of many potentials. Four times as many, if maths is to be trusted.

Then there's the rest of the game: the shooty bits. A Mass Effect-style skills system sees you invest skill points in a raft of different areas, each falling within the general spheres of tech (gadgets and explosives), arms (guns and noise) and stealth (hacking and slippers). On a basic level, piling your points into guns will make the reticules smaller, and every five or so rungs on the skill ladder will unlock new abilities. Bullet Storm will allow you to fire your SMG for a short while without having to reload, while an ability on the assault rifle ladder will have your crosshair snapping to headshots. General abilities like Awareness flag the positions and states of enemies to help you plan attacks.

The stats-based RPG underlay can leave the actual act of clicking on people

to make them dead feeling floaty as long as you remain unskilled on paper, but each weapon class brings with it features available to any level.

When held in place over an enemy, pistol reticules will contract and allow for headshots. Similarly, holding fire with the shotgun will result in a critical hit, SMG's rack up damage multipliers for every enemy killed, and grenades' trajectories are mapped out for ease of use. But if you rank up enough in martial arts you can ninja your way through most fights, unlocking skills like

roundhouse kicks and running jumps. As improbable as it sounds ("Ding! You've learned how to knee people in the face!") it's as rewarding a slot as any to drop your skill points into.

Hacking, lockpicking and circuit breaking are reduced to mini-games. Find numbers in a big moving wordsearch puzzle to hack, hold pins in place with the mouse to lockpick, and plot a path through a deliberately confusing maze to break a circuit.

In this area the envelope's not budging an inch, but cleverly the world continues to exist (and attempts to murder you) while you hack your way through a crossword. You won't

DODGY DOSSIER Alpha Protocol will hold, deep inside the

trembling plastic disc unto which it has been printed, reams of ancillary, superfluous and extraneous wordage tied up in your company's database and your own personal email inbox. Every character you meet will have an extensive profile and history filed away in a database, and you can peruse this at your leisure. According to your boss who seems to be Morgan Freeman's brother - in the opening scenes of the game, loading yourself with this extra intel can introduce new dialogue options during conversations, and lead to some side-missions

system too. Flirt with your operations handler, and you'll pen a bit of writing where you describe what you'll do to her in a closet at the Christmas party. Oh Bond err, Thorton.

Everything that matters in the world of PC gaming

LONG DISTANCE STEVE

NE OF THE best features in this issue is Steve's Around The World In Eight Simulations. He started off in London and pledged to make it around the globe using a load of different sims. And it's not as easy as you might think, particularly as there was a key mode of transport missing. Find out how Steve fared without it on page 46.

As we go to press, we're also preparing for the annual trip to Germany for the games expo out there. This year it's in Cologne (thankfully as Leipzig was a pain to get to) and by the sounds of it Steve has around the clock meetings seeing all the greatest new games, which he will report back on next month. I'm hoping he has chance to sample the strong German lager at some point too. All work and no play, etc...

Back to this issue and we have hands-ons and first looks coming out of our eyes. There's so much stuff about at the moment, we just need some of these games to actually come out so our reviews section looks more impressive!

We have hands-on with Batman: Arkham Asylum, Championship Manager 2010, Alpha Protocol, Tropico 3 and Champions Online, and a first look at the hotly tipped Command & Conquer 4. Rocking.

THEBEAS When the zombies are away, the cats will play.

From Africa via Japan comes *Resident* Evil 5 and its new take on an old genre

EVELOPER Capcom PUBLISHER Capcom WEBSITE residentevil.com ETA 18 September

FYOU'RE NO longer having to wear nappies, you've probably played a Resident Evil game at some point in your life. Ignoring the argument that young children shouldn't be playing zombie games, it's certainly one of the most recognised franchises in modern gaming history.

After the grotesque abomination of the (initial) *Resident Evil 4* PC port, Capcom are attempting to go one better and release something vaguely playable that doesn't look like a canvas plastered with low resolution cat's

vomit crudely formed into the shape of digitised dead people.

As you can see from the screens littering this page, there's no evidence to suggest that'll be the case this time. In fact, it looks bloody gorgeous. Africa seems to be an increasingly popular location to set videogames and we welcome this new trend, provided it's not all we see in the next year or so. Variety is the spice of life and all that. Anyway, the great visuals means point one of the "What could go hideously wrong with *Resi 5?*" list is crossed out firmly.

We have to admit that point two – the controls – is something that's causing us concern at this time. Survival horror games ported from established console franchises have a history of having dreadful controls. We're not going say that *Resi 5* will follow this traditional line, but we'd be lying if they felt smooth.

I'm sure y

This sequel is definitely focused on action, breaking away from the traditional claustrophobic atmosphere of other genre mainstays and trying to be all modern and shooty. Whether that's what you want is up to you, but there'll certainly be a lot to do other than just blast zombies. There's a full-on co-op mode, with one of you controlling the male character (Chris Redfield from the original) and the other bioweapons expert Sheva Alomar, a new entry in the series.

The story, incidentally, is a load of cobblers about people having strange creatures shoved down their gullets. There's also a big guy with nails driven into his body hacking peoples' heads off with a vast axe. Which, we're informed, is what happens when zombie outbreaks strike.

STUFF

This is a rumour brought to you by some websites that like to dig about in the files and documents of the (not that) famous: a guy who likes rolling about with white balls attached to his sleek Lycra one-piece suit (that is, he does motion capture work) has been helping out with something called "Hitman 5 videogame" for a company cryptically named "Rocksteady Limited". We've since learned there have been four other Hitman games, all good fun apparently, and Rocksteady are responsible for the new Batman game. The things you learn, eh?

LIFE IS A ROLLER COASTER

SHIT! HOW LONG LEFT?

DEADLINE

Real-world architects are designing your virtual slaughterhouses. Will Porter reports

ERHAPS IT HAPPENED to vou the first time you flew into the Undercity in World of Warcraft. Perhaps it was passing through the station doors and taking your first steps into City 17. Perhaps it was simply walking down an alley in Grand Theft Auto IV. The feeling that you are in a real, solid location with its own history and identity is a rare one in videogames, where concrete corridors and metal barrels have for so long stamped their mark.

Increasingly though, the tenets of real-world architectural thought and layered city-building have entered gaming - accompanied by developers and artists themselves trained in building design. At this year's Develop Conference in Brighton, the merging of these two fields was a hot topic.

BUILDING GAMES

"I studied architecture and it was something that I really enjoyed, with the monumental spaces and the built environment," explains Rob Watkins an architect who's worked on Lord Norman Foster's Gherkin tower and the Birmingham branch of Selfridges - who is now an artist at Lionhead working on Fable: The Lost Chapters. "Games are more interesting as they're freer; they love that freedom of design. With games you don't have to worry about damp-proof courses, you don't have to worry about rolled steel joists... you don't have to worry about any of that."

Viktor Antonov - the lead artist of Half-Life 2 and a creator of City 17, who previously worked within the similarly strict discipline of automotive design -

agrees wholeheartedly: "I chose videogames as there's no zoom-ins or close-ups," he explains. "Automatically you just have an 180° vista, so everything you design for videogames is an establishing shot.

Rover uses new stain-

resistant Steradent.

"Whereas with film or illustration you can zoom in and pick up detail, in games your only tools of directing are architecture and light. That's why I love

videogames: you have this wide vista and you paint with buildings."

With games it seems, good games at least, it's not all about painting pretty pictures - the architecture can run deeper than simply building a car park for a muscular hero to shoot aliens in. Take City 17, that place we all once knew and loved, and still the best example of urban design PC gaming has to offer: "It was an intimate urban experience," explains Antonov. "There's a feeling you get when you get off the train and enter a city you've never been to before, there's a specific feel to it. It sticks with vou forever.

"For example, the first time I went to Los Angeles I remember the mixtures of light, the places and the smells which struck me. So with City 17 we were trying to recreate the specific feeling of a city, but also giving it the function of storytelling. To bring more richness and depth to it we went through all the stuff that had happened before that point. Going a 100 years back, 10 years back -

recreating everything that had happened architecturally, so it felt like it was a real place."

To this end writers would even present tales of what had happened in the various *HL2* environs in the years before Freeman's dramatic entrance whether two years before, or 10 - while Valve had photographers in East European cities taking photos of backstreets and alleyways rather than the boring main streets.

Designing cities isn't all flights of fancy you see - no matter what you

design in a game it generally has to have its roots somewhere in day-to-day life."

popular.

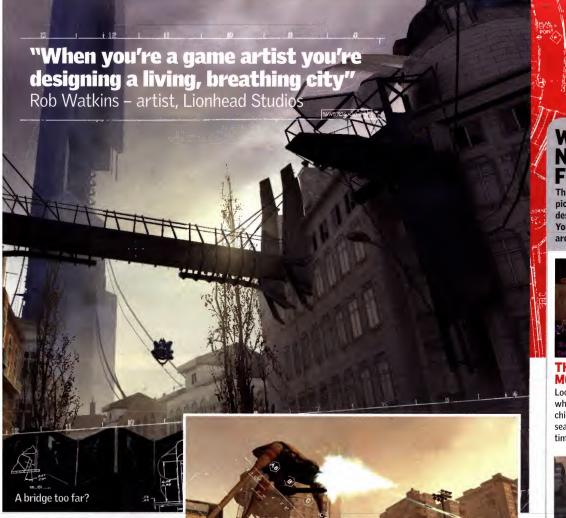

"You can't just have textures mapped onto places, you have to have a feeling of reality," picks up Watkins. "A lot of the things I learned in architecture I can apply now in the

game environment. Making sure structures look credible, making sure that walls don't look like they would fall down, showing elements of rafters, joists and of the building's construction. That all adds to the game's integrity."

That said, games can clearly go further than a man who's just been told to tack an extension onto a semidetached maisonette. Games are dream landscapes rather than utilitarian places where people live and work, and as such don't necessarily have to make any real-world sense - doors can be locked and trapdoors in kitchens can lead to long winding corridor dungeons inhabited by dog-people.

"The reason rooms can be arranged in that way is because they have a psychological meaning," agrees Rory Olcayto, features editor at The Architect's Journal, and previously a game designer at a company called Inner Workings.

Olcayto then goes on to compare the experience of playing games to the experience of visiting specifically created zones of not-quite-reality in the real world - places like Disney World, Las Vegas or Dubai.

"One of the trends in global culture now is the 'experience economy' where people are trying to sell experiences to us rather than physical objects," he explains. "So you get places like Dubai, which is a perfect example: it has the palm island, it has the world's tallest

building. It's all about bombast and experiencing luxury. But it's bad and poor quality when you get there. In my opinion, in videogames, you can experience this sort of thing much better than in the real world."

FAKE IS KING

So what's better (as Morpheus would say in the Matrix film that wasn't shit) the real or the unreal? Well, designing fake cities seems to win hands down among our panel.

"When you're a game artist you're designing a living, breathing city - when you're designing in architecture your designing almost utopian buildings: very sterile, very clean," explains Watkins. "When it's visualised it's got the odd person in the lobby, but in reality architecture isn't like that - it evolves, it gets grimy and starts to decay. Games show that."

Olcayto picks up with the fact that his old job used to be replacing windows in rough Lanarkshire council estates: "Part of the relief from that was playing Doom II on a network with

the council technicians," he smiles, "and I realised that we were spending more time in level three of Doom II than anything else. I preferred it there than in the real world of architecture, which is onerous and doesn't actually involve as much design as you may imagine."

City 17's streets were designed to

accomodate big spidery things.

This is perhaps why it's becoming more and more common for schools of architectural design are studying the virtual landscape more and more whether deriding the urban sprawl of Second Life, or taking heed from the tightly designed narrative and gameplay functions of the Fort in Team Fortress 2. Games are a pleasant and interesting place to be, and the real world can frankly be rather dull.

Is there anything you want PC **ZONE** to investigate? (Warning: some jobs might be considered too big or too small...)

Looking solely at the Scumm Bar where Guybrush meets the pirate chiefs, the journal praised the 360° sea views afforded by the "floating timber deck system".

The Architect's Journal praised Halo's use of materials. "The prevalent use of local sandstone and homogeneous approach to design make for an environment that is comparable to the spa towns of Harrogate or Bath."

Will Wright's classic is accused of too often becoming an urban sprawl, or in Architect's Journal writer Riva Patel's eyes: "a high class favela". Yet praise for its buildings, such as thee pagoda rooftops, is unreserved.

WORLD OF WARCRAFT

CRITICAL DELAY FOR STARCRAFT

First instalment slips to 2010

WEBSITE starcraft2.com

THE START OF the StarCraft II trilogy is forecast to sell 4 million in the first few months, but you're going to have to wait a bit longer to get your hands on it as - like BioShock 2, Alan Wake and Mafia II - the game has been delayed until 2010.

Chief industry forecaster and analyst Michael Pachter has also said he expects StarCraft II to be on sale just three months after beta testing kicks off, given the quick approval of Warcraft: "They $\ \, \text{did a phenomenal job with the } \textit{World of} \\$ Warcraft beta. As I recall, it was around four months - and they'll have no issues at all in attracting 30,000 supremely knowledgeable beta testers, so my bias is that the beta will take less time than most expect," he said.

StarCraft II has been put back to allow its release to coincide with the

launch of Blizzard's new Battle.net game service.

"Battle.net will become the foundation for connecting the tens of millions of members of the Blizzard community in a social gaming network across all Blizzard's future games," said ActiBlizz CEO Bobby Kotick.

"There is no better opportunity to launch this than through the launch of StarCraft II. This is likely to be the most anticipated groundbreaking RTS game of all time and the Battle.net platform is an investment in the future of gaming."

So it looks like Activision Blizzard will be putting all its eggs into the Modern Warfare 2 basket this Christmas which, with a £54.99 price tag for the console versions and just £34.99 on the PC, won't be such a bad thing for the publisher.

HOW TO LOSE FRIENDS & INTERVIEW

If you want to enter a written debate with this professional opinion stater, you can contact Log by the methods below.

letters@pczone.co.uk

Mr Log, PC ZONE, 2 Balcombe St, London, NW1 6NW

ob interviews have always been a barrier between myself and the world of employment.

The fear of being predictable, or somehow boring, has always

overridden the fear of seeming unemployably erratic. Ask me what I'll bring to your company and I'll perform an erotic fan dance rather than say "I work well on my own and in a team".

Until I stumbled into games writing, I never realised that this life-hindering disability would also apply if I was the one asking the questions. So, as the world's most awkward and reluctant interviewer, here are the tips I've picked up.

1. ALL THAT MATTERS IS WHETHER THEY LIKE YOU

Remember: It's not what the developer says to you that matters - it's how many times they look gently surprised and say "That's a good guestion". If they say that magical phrase, don't wait for an answer - just say thanks, and ask your next question.

Try to sound clever: don't ask "Are there any new weapons?" say "This franchise is built on an innovative approach to combat, which I personally enjoyed on several levels. Here is a drawing I've done of a new gun, do you think it's a good gun?"

Remember: Your readers aren't stupid, and can guess most of the information about a game. So focus on asking that one question that will make your interviewee offer you his job, leaving him to return to your office with an hour of recorded conversation to transcribe.

2. DON'T WORRY ABOUT WHO YOU'RE TALKING TO

An alternative approach is to seem professional. Professionalism implies emotional detachment. So to be the consummate professional, it follows that you should be utterly detached from the interview. Save precious hours of preparation and research by simply not knowing what game you're talking about. Just turn up, and say one of the following things:

- a) "So, it's all very exciting, tell me what this game is bringing to the paddock."
- b) "Our readers won't be familiar with this game, so let's pretend I'm not either. What's it called?"
- c) "What kind of score do you think it'll get?" (If they say above 80, look impressed.)

3. NEVER TRANSCRIBE ANYTHING

Transcribing a conversation you've just had is one of the most metaphysically disconcerting experiences you can have. It's like going into

"Save precious hours of preparation and research by simply not knowing what game you're talking about"

FURTHER SOLOMONS

Another question Jason Solomons

asked was: "Your films certainly seem

to strike a chord with your fans. And

speaking of chords, the score of your films is

very important. Do you compose that first, before making the film?" The answer was to the

effect of: "No, that'd be weird, as we'd have to

act along to it." But this question is a perfect

example of everything you'll have learned

here. Show off, by all means - but

never be anything other than a

a pub, only to stumble across yourself making a series of clumsy, unsuccessful passes at your childhood sweetheart. You end up standing there, looking at yourself sweating, stammering, unprepared and unable to process rejection. So don't bother! Just write down a few things that sound cool. Here's some things every developer says which you can safely copy out in every article you write:

- a) "We've really improved the AI, there were times when it surprised even us."
 - b) "There was so much cool stuff we couldn't fit into the first game, but it's all in this time."
 - c) "I think people are going to like this game."

play the music while filming and get the cast to Every profession has its stellar talent. But we can console ourselves that the world doesn't necessarily reward that talent. Take the film critic, Jason Solomons. I witnessed him asking Charlie Kaufman – the spectacularly talented writer and director - where he got his ideas from.

Seriously: a grown man, asking another grown man where he gets his ideas from. He might as well have added, "Do you think them up, all on your own? What's it like seeing through your eyes? Are there more

colours?" That's a crucial thing to remember: shit doesn't sink.

UNIVERSITY OF ABERTAY DUNDEEInstitute of Arts, Media and Computer Games

The UK computer games industry's first academic centre of excellence.

bertay University in Dundee has been pioneering degree courses in computer games technology for more than ten years since launching its first postgraduate degree in software engineering and computer games technology back in 1997. Since then, Abertay has expanded its portfolio to include undergraduate and masters degrees in computer games technology, computer arts, game animation, sound production and more. The computer games technology and computer arts degrees hold two out of only six accreditations so far awarded by Skillset, the sector skills council for the creative industries.

Taking it to the next level

Now Abertay is consolidating these highly acclaimed and recognized courses alongside a constantly expanding range of related subjects into a brand new Institute for Arts, Media and Computer Games with around 800 students on courses including Computer Games Technology, Computer Arts, Creative Sound Design and Computer Game Applications Development, plus many more.

Just last year Abertay attained Skillset Media Academy status and was awarded an investment of £3 million by the Scottish Government to create the UK's first national centre of excellence for computer games education. And thanks to that, the centre of excellence is opening as Abertay's new Institute of Arts, Media and Computer Games this autumn with a brand new flagship degree, Master of Professional Practice in Games Development. So, for the best there is to offer in computer games-related degree courses to set you on your way to a career in videogame production, visit www.abertay.ac.uk now.

Chris said "After the third year of my degree, I took a year out and worked at Realtime Worlds for 16 months before returning to complete my honours degree. The learning environment at Abertay stood me in good stead for finding employment. There is a great respect for Abertay within the gaming industry, and the lecturers are keen to use their own knowledge and contacts to help you find work placements during and after university.

"I was also very fortunate to be involved in Dare to be Digital at Abertay. I was the sole Scottish member of my team, working with four students from Beijing University, and our game prototype won the Innovation and Creativity Award and was one of three games short-listed for the BAFTA 'Ones to Watch' Award.

"We have since set up our own company 'Phoenix Seed' working (between Beijing and Dundee) on a number of small projects in our free time. We were honoured to receive a Digital Animation Excellence Award during the 2008 Olympics for one of our games which featured in the official Olympics Art Exhibition in Beijing last year, beating thousands of other entries.

ASSASSIN'S CREED II

DEVELOPER Ubisoft Montreal PUBLISHER Ubisoft WEBSITE assassinscreed.uk.ubi.com ETA 20 November 2009

this month, to prepare ourselves for its second coming, and in doing so we quickly and inadvertently struck up a list of things which we reckon absolutely must not be repeated in *Assassin's Creed II*.

Foremost is the fact that the first half hour of the game is effectively a lengthy cutscene interjected by patronising and unskippable tutorials.

There's also the guards in the countryside, for whom the sight of a galloping horse elicits a sort of debilitating and yet murderous outrage.

Oh, and the giant black borders on the top and bottom of the screen, that was particularly annoying until you could train your eyes to ignore it.

So Ubisoft, if you could fix all those things and add lots of good stuff, that'd be really great and your game will get a billion percent.

THE BIGGER PICTURE

1. IN THE MIDDLE OF THE NIGHT

A day-and-night cycle will free Assassin's Creed II from the eternal mid-afternoon sun of the Middle East, and deliver it to the range of lighting conditions of 15th century Italy. It's just like today's range of lighting conditions, but more olive oily.

2. VISUAL FIDELITALY

That's 'fidelity' and 'Italy' worked into a single word, and the only succinct way of describing how beautiful AC2 will be. It'll have the "internal vegetation" tech from Far Cry 2, and a swishy new cloth system for extra whooshiness.

3. CHASE ME CHASE ME

When crossing the Italian countryside Ezio isn't restricted to hoofing it in his Sicilian clogs, instead he'll be able to control a horse and carriage. Guards' suspicion metres will go berserk at this sight, and they'll attempt to scramble aboard.

4. SHOOT THAT POISON ARROW

Ezio can also upgrade his iconic wrist-blade with the help of Renaissance polymath Leonardo da Vinci. With the upgrade attached, he can prick foes with a poisoned needle, which sends them into a berserker rage after a matter of moments.

5. SECRETS AND LIES

Ubisoft are calling them "secret locations", and they're specially designed interiors of famous landmarks. Here you'll find acrobatic challenges and puzzles. "Hours of additional gameplay," shouts Patrice Desilets. Twenty minutes, we reckon.

6. MONEY, MONEY, MONEY

Ezio is a greedy bastard, and will be able to use any illgotten gains to upgrade his armour and buy new weapons, tools and employ "faction services".

UPFRONTINTERVIEW

CHRIS TAYLORFOUNDER, GAS POWERED GAMES

MMANDER-IN-CHIEF

GPG's founder unveils Supreme Commander 2 exclusively to Ali Wood DEVELOPER Gas Powered Games PUBLISHER Square Enix WEBSITE na.square-enix.com/sc2 ETA TBC

HEN THE FIRST Supreme Commander appeared the sci-fi RTS crowd took its stonkingly big robots to their hearts. and Forged Alliance ensured SupCom stayed there. Gas Powered Games have now teamed up with Square Enix to make SupCom 2, and Chris Taylor spoke exclusively to us about it:

Did you learn anything from making **Demigod** that helped in developing SupCom 2?

Most of all, we refined our production process which allowed us to raise the bar visually. Our maps and characters are better than ever, and the technology is more refined and efficient.

What led to you working with Square Enix?

Square Enix were checking out western developers, and we started a dialogue as they were chatting with many different companies. Over the months we talked about doing something together. As we got to know each other, we decided this would be an exciting first project together... and so far, well, it's been an awesome relationship.

What will be the first noticeable difference for returning players?

The visuals are incredible, the maps are unique and interesting, and the game has been updated in almost every way. Experienced players will notice our in-game economy has undergone vast improvements making it much more manageable, putting the emphasis on the combat, and not on the economy.

So running the money side won't be as much hard work?

No, not at all, it'll be much easier. But honestly, it's what someone might have expected in the first place. A unit has a cost, and when they have those resources, they can have that unit built. The player no longer has to worry about

storing Mass and Energy (which had the bad side effect of spilling over and being lost) and can instead just focus on the strategy and tactics of the game.

So has anything got more complex?

While the economy has become more understandable and approachable, the game itself will have many depths for the player to explore. We certainly wanted to create a game that allowed new players to enjoy it, but it was key that experienced players felt there was a continuing sense of depth in this game.

Are you expanding the original's tech trees?

Our goal was to make every unit in the game important, instead of simply pushing ahead to the highest tech levels. We did this through the tech tree system, where the player earns points they can spend to unlock different upgrades, boosts and units. It's great

because the game plays differently depending on what makes sense strategically, and it provides many more hours of fun experimenting with the different approaches a player might have to these tech trees.

What new mega-huge units will we see? What's the coolest one?

Ha! We've so many crazy new units it's hard to pick a favourite, but I think many will say that the Cybranasaurus Rex is the most exciting (it used to be called the Cybranzilla, but this new name is more suitable). I also like the King Kriptor and the Universal Colossus, both incredibly powerful units, and completely over-the-top visually!

Some SupCom players were plagued by major performance issues. Has this been sorted in SupCom 2?

Well, we wanted the game to run on a lot more systems than the original, so this has been a top concern of ours from the beginning. If you consider the game runs great on a three-year-old PC, we're feeling good about the performance.

Will the playable factions stay the same or are there new ones?

We've taken the existing factions and evolved them, giving them fresh new looks. However, as the story evolved, the original Aeon Illuminate became the Illuminate, and have retained much of the culture and overall beliefs of the original faction. They've been given the greatest visual overhaul, and we're excited about the new look, and feel that the faction now has a much more robust visual design.

For us, it's not just about creating interesting units, we also need to give these visuals a strong game utility, so the player knows what the unit is by looking at it. It's an interesting balance between originality and usability.

UPFRONTFIRSTLOOK

It's not much, but it's home.

VIVA LA REVOLUCIÓN! TROPICO 3

Quiet, peasants! David Brown, your glorious leader, wishes to speak

DEVELOPER Haemimont Games **PUBLISHER** Kalypso Media **WEBSITE** tropico3.com

PUT IT to you, dear readers, that a lot of people remember the first Tropico game fondly. I also put it to you that of those people, only a minority actually gave it any significant degree of time. Let's forget about the second game - where the setting was changed from a fictional Caribbean socialist paradise to a community of bloodthirsty, grogswilling pirates - and concentrate on the first one, because this is where Tropico 3 is picking up the baton. No buccaneers here, just honest citizens and corrupt leaders of revolutions.

The premise is much the same: the fictional Caribbean island of Tropico is yours to command, by fair means or foul. You can choose to be a tyrant, ruling your land with an iron first in an iron glove with iron bits sticking out from the knuckles. Equally, you can be tender and caring to your people, perhaps even posing for publicity photographs cradling an injured lamb in your arms, nursing it to health after a nasty capitalist ran it over in his gasguzzling decadence machine.

CUBA LIBRA

From our time with it, we can tell that *Tropico 3* is a huge improvement over the first one, as you'd hope it would be. Political, social and economic options are plentiful, including the ability to issue edicts (enact legislative changes) that alter the way your downtrodden society functions. You can ban drinking and contraception, or be a liberal leader and allow same-sex marriages and set up a range of sensitivity training courses for your people.

More underhand strategies are still needed though, regardless of whether you're a benevolent or tyrannical leader.

THE LOWDOWN

- Trying something different
- More comprehensive
- Spot-on visuals
- Be a good or bad leader
- Will people buy it?

ETA **16 OCT 2009**

Faction leaders can be bribed or arrested in an attempt to prevent criticism of your regime and there's the small matter of siphoning off public funds into a Swiss bank account, something which is used to calculate your final rating once you've finished the game (ie been thrown out of power in a counter-revolution).

Unlike a lot of other god games, you have a physical presence in your game world. As El Presidente, you can make speeches on your palace balcony like a cigar-smoking Pope, or step down from your ivory tower and mingle with the common folk, (or your comrades, depending on your dedication to socialism), by making personal appearances at schools and such or

speeding up construction of important buildings. Whether having an avatar in the game means you can be assassinated or not, we've yet to discover. You can certainly have traitors or rebels shot down if you so wish, so perhaps they can retaliate.

There's also the small matter of your relations with the two superpowers in the world: namely the United States and the USSR. Again, you can choose to move towards either Cold War faction if you so wish, so there's no reason your communist paradise couldn't be allied with the capitalist pigs in Washington.

Aesthetically, Tropico 3's looking good and the music is salsa-riffic, complementing the tropical visuals nicely. Interesting god games are thin on the ground and, certainly, ones with a focus on something other than historical trade are even more sparse. so it's good to see something breaking from the pack and trying something new . Yes we know it's a sequel, so it can't, by definition, be 'new' new, you know? You know what I mean.

A NEW CHALLENGER EMERGES...

CHAMPIONSHIP MANAGER 2010

David Brown is wondering where 2009 went to

DEVELOPER Beautiful Game Studios **PUBLISHER** Square Enix Europe **WEBSITE** championshipmanager.co.uk **PREVIOUSLY IN** 207

ANG ON A minute? Weren't we talking about Championship Manager 2009 back in issue 207? Hmm, let's see... aha, yes! We were. Don't worry, though, it doesn't mean Beautiful Game Studios have thrown away the promising code they'd previously unveiled to the world, it's just that, with ETA 11 SEPT 2009 a release date now scheduled for sometime in September, the game runs into 2009/2010 season time so BSG have changed 2009 to 2010. Silly, but understandable.

As you'd expect, you're not going to be able to tell what's changed in *CM2010* by looking at screenshots. It's all about what happens behind the scenes, as it were, and in this specific case, what's happening in the game's match engine.

Before you get to the matches though, you've got tactics, squad selection, training, scouting and all the usual gubbins to go through before you can begin watching people kick a ball around a park.

Everything is done up in a swishy blue Sky Sports style, with tickers, information panels and such offering a more pleasing aesthetic than Football Manager. Some people will prefer the starker nature of FM, but CM2010 provides an adequate middle ground

between that and the low-brow styling of EA's *FIFA Manager*.

Elsewhere, there are hundreds of little things to talk about with regards to the workings of the game, far too many to adequately address here, so I'll just restrict myself to the more pleasing additions.

One of the first things is the player comparison tool, which is much easier to interpret at a glance than its counterpart in *Football Manager*, with attributes broken down into Physical, Attacking, Mental etc. and a little summary at the bottom of each column telling you which player in a pair has better overall stats in this section.

Status lozenges (ie the bits next to-a player's name on the squad screen) are also better done than in *FM*, cycling through each one rather than placing one thing above another and potentially keeping critical information from the player. A quick pointer hover also lists all the lozenges at once, which is welcome.

IT'S ALIVE!

How BGS are trying to keep things up-to-date after release

THE LOWDOWN

- Visually impressive engine
- Set-piece creator
- Scouting network
- Lots of ideas...
- ...that might not work

One thing that has always plagued football management games is the fact that, once a game is released, that's it. How many times have you loaded up the latest *Football Manager* and gone "Oh, but that guy's moved to Real Madrid"?

BGS are trying to change that with *CM Season Live*. Six monthly updates will provide database changes and, interestingly, the chance to start the first season at a point in time identical to that of real life.

If the team you support in reality has had a shit-hot start, well, you can just pick up in-game where they've left off.

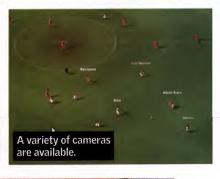

Certainly it's a novel way to approach patches and content updates, but keeping *Champ Man* up with real life won't be free, if that makes a difference.

The scouting system is well presented too, but one thing that did annoy slightly was that new reports were produced every game day, with player positions not highlighted in the said list, meaning you had to click through each player to find out how useful they'd be to you.

START YOUR ENGINES

And so to the matches themselves. After you've wasted hours fiddling about in the amazingly fun set-piece editor, you'll move onto the team talk screen. This is more comprehensive than FM's equivalent, with different tones and

individual criticism or praise to dish out. For example, you can tell a defender he's doing well when the opposition is failing to score, or you can tell him he's doing badly because the opposition is getting too many free headers and/or shots in, even if you haven't conceded any.

The match engine itself looks lush, with more detailed and better animated characters, crowds and stadiums all adding to the experience. In my first friendly in control of Liverpool, Ryan Babel did a neat little step over to bamboozle a Portuguese full-back; Andriy Voronin got done for pushing the keeper while a goalmouth scramble was taking place; and Fernando Torres obeyed my instructions and got booked for 'going to ground' too easily in the box. These little touches are all, of course, present in FM, but you can actually see them getting played out now and go "Ah, yeah, that idiot Voronin just shoved the keeper over," rather than watch a load of stickmen have a bit of a jostle and then a free kick be given.

A couple of words of caution before you start whipping yourselves into a creamy froth of excitement - the engine isn't without its problems (at the time

of writing). The way players move and/or interact with the ball looks a bit strange at times and, especially when trying out moves on the training ground, they do some really daft things. Things definitely improve when you go into a proper match, with players reacting to the ball's movement and, generally, producing slick games to watch.

The question of whether the engine itself is as robust as FM's is still unanswered, but certainly the signs are there that Sports Interactive might have a genuine contender to their top dog football management status. 🖼

NE OF THE more annoying extensions of the effect games have on our brains specifically the one that has our brain going "phwee, I'm in a war" - is the one that causes our morality lobe to misfire and think that, when we hover over the "tell the friendly robot he's rubbish and then kick him in the face" option, we're about to inflict misery on a real thing. It's worth pointing out that real robots wouldn't experience misery or pain, never mind ones in BioWare games - so even when two steps removed from a negative act we (well, I) still can't stand punching my robotic friends.

So you opt for the "pat him on the head **OCTOBER** and tell him he's lovely" 2009 dialogue choice instead, and you spend the rest of the game doggedly trying to please everybody by worming your way through the most positive sounding sentences, like a patient trying to escape a mental hospital using personality guizes from Hello! magazine.

It's Mass Effect's "vague response" system dulled even further, but where that game could muddy your intent, Alpha Protocol gets it right more often than not. More importantly, being a tit in this game feels guilt-free, and not because the characters aren't worth caring about, but simply because the writing on the evil side of the fence is both clever and very funny. Alpha Protocol is a sarcasm simulator, and not having your character's

You smash his vodka glass and wave the shards about threateningly, swearing, mocking his accent and acting silly. The upside is, he's rightfully terrified and hands over the location of the guy you're attempting to track down.

The downside is that you've missed out on a potential side-quest Grigori would've divulged had you been a bit more pleasant, and that further down the line - hours more into the game your target will have been informed of

rejected pages from a Bond script may be dulled by some apparently tired level design (the generic Middle Eastern town we played through was a maze of brown alleys, wooden doors and empty rooms), and the visuals are oddly low-fi.

Compromises are being made, and in leaning so heavily on a solid skill-based system Alpha Protocol naturally gives up some of its shooter qualities. That said, it's hard to find any RPG/shooter in which the combat is endearing from the game's start. Without creating and honing a character ourselves, to the point where we know exactly how and when to use given skills, it's going to be difficult to draw conclusions.

Even if that's the case, there's a promise from Obsidian that the game will be flavoured more by your choices than any other game in the genre. And we guarantee that you'll be able to punt a quest-essential orphan into a bonfire without feeling any remorse.

KANE'S BACK...

COMMAND & CONQUER 4

David Brown is a bald man with a grand plan

DEVELOPER EA Los Angeles **PUBLISHER** EA **WEBSITE** commandandconquer.com

EE, WE ALWAYS knew that bald guy known only as Kane was a decent fellow. He was just misunderstood, only wanting a better world for you, me and the entire human race. Granted, he may be responsible for the deaths of thousands and his insane quest for personal deification and radioactive tiberium crystals is the reason the world has turned into a bleak, green, irradiated wasteland. But forgive and forget? Everyone makes mistakes, after all.

Now Kane's trying to make amends, which is why he's approaching the GDI (Global Defence Initiative – *C&C*'s goodies) with a plan, one that might just save the putrid galactic scab one might call Earth. His plan is simple – an alliance.

THE LOWDOWN

- Persistent XP
- Hotkeys not so important
- Lots of new units
- New ideas
- No Ric Flair

The GDI and Kane's Brotherhood of Nod (the baddies) working together to push back the tiberium menace and help get the planet back on its feet.

KANE THE SAVIOUR

Introduced in one of those gloriously campy (and now superbly hi-res) movies that the *Command & Conquer* series is renowned for, Kane holds some strange orb in his hand while he makes the proposition. The GDI guys look a bit nervous, but we know they decide to agree, perhaps after some tough negotiation or maybe just after a curry and a night out on the tiberium cocktails.

While we don't know yet who will actually make an appearance (we know for sure Ric Flair won't be in it, sadly) the cast are sure to bring life to the story, as they've always done.

This meeting takes place 10 years after the events of the previous game. Fast forward another 15 and you've got the present day in *C&C4* terms. The plan is coming to fruition, the Tiberium Control Network is almost complete and the two factions have been skipping

merrily together in tiberium-free fields for a decade and a half. A new golden age for humanity is said to be dawning. So, of course, as is the way of things in game land, things go terribly, terribly wrong. We don't know how they go wrong, nor would we tell you if we did, because it would spoil the story. But it does and the GDI and Nod are back at each others' throats once again, the fate of mankind in the balance once more.

One of the things Jim Vessella, producer on the *C&C4* project, was eager to stress was the notion of appealing to both hardcore and new users. A common enough refrain, of course, and one that is

hardly easy to attain. To be fair to him, it

does seem like the game could be significantly different to its predecessors, although not in a "shit, they've ruined it!" kind of way. There's definitely more of a "hmm, that sounds interesting" vibe to the project at the moment. How much you agree with that statement depends on the following passages, so let's get cracking.

Essentially *C&C4* is the same game as all the others. You build a base with a mobile MCV (called a Crawler in this one – well, ish... we'll get back to this

He looks a bit like

the Undertaker.

2010

KEEP YOU FRIENDS CLOSE

What C&C4's multiplayer means to you and your closest

Multiplayer is almost certainly where Command & Conquer 4's longevity will lie, an opinion supported by Vessella himself. You'll be able to play it online in a number of ways, either co-operatively against the AI or competitively against people. We can say now, for certain, that co-op will be great.

The competitive side will allow for oneon-one skirmishes all the way up to gruelling five-on-five team battles. If you decide to form a team with friends, you'll also be able to go from battle to battle as a unit, with no annoying regrouping in lobbies. Just bounce from one glorious win to another without dropping out.

Whether you'll be able to do this while in control of the Scrin is unknown at the time of writing, but we got the impression that this might be announced somewhere down the line. Watch this space for that one.

There are probably medium-sized units, but we haven't seen them.

a little later) and set about churning out a big army of tanks, infantry, engineers and other instruments of mechanised destruction. You can do this as either the GDI or the Brotherhood of Nod, each with their own distinct units.

The first place C&C4 differs from its ancestors is that you have to choose a class, which basically means choosing between Offence, Defence and Support unit loadouts. Each one has its own specific roster with unique roles to play. For example, using Defence gives you heavy turrets to deploy, but very

"The game could be significantly different to its predecessors"

little in the way of quick, incisive attack troops with which to gain ground; offence does the opposite; and Support gives you the option to properly utilise aircraft, artillery and transports. You must pick one of these before starting a game, so it'll be important to think about what you plan to do or what your preferred style is.

This is absolutely essential to what EA Los Angeles are planning for C&C4, specifically when you consider that you can't actually be defeated. This doesn't mean that your units are invincible - far from it - but if your Crawler (or the equivalent depending on which class you've chosen - the Crawler is used for the GDI's Offence class) is destroyed, it isn't the end of the world. You'll then get the chance to respawn as either the same class or a different one. How well this idea will work can only be divined from a proper play test, of course, but it has the potential

UPFRONTFIRSTLOOK

JIM VESSELLA PRODUCER, EA LA INSIDE THE MIND OF KANE

You're making some distinct changes to Command & Conquer 4's gameplay. Will the hardcore approve?

We think the hardcore players will like the progression system. In terms of being a completionist, I'm kind of that way in games and I like to get everything and unlock everything, we're going to have certain challenges in there that are really tough that hardcore players can really go after.

In terms of strategic depth, we're not removing it – we're opening it up. The Crawler you can kind of go anywhere with, whereas in the old C&C it was all about your build order, which is fun for a lot of people who find the perfect order and just execute that time and time again – see how fast you can get, how fast you can build those power plants up – but it does become predictable, so I think with C&C4 it's going to be a more evolving experience. People are going to find great strategies, but the Crawler can really vary it up, pulling a fast one on the enemy.

We're hoping the hardcore player can find a home in *C&C4* and be able to really enjoy some of the new things we're trying, but it is a different game, for sure.

How about the modding community? Are they being catered for?

We're not disclosing too much about *C&C4*'s mod support. We're glad that people have actively been taking the *Red Alert 3* mod kit and trying some cool things with that. Right now we're trying to get the

launch nailed down and focus on that, but it's always a really tough trade-off trying to support the mods, SDK and toolkits while doing the launch as well. Often, as you've seen in the past, we'll sometimes release the tools a little bit after we've launched the game and we've polished them up so they can be used by our fans.

We don't have an exact plan, so I don't have any specific details on when modding is available or how it's going to work, especially in *C&C4* as everything ties into the player progression. We're going to have to do a little bit of research on that and also kind of ask the community how they think it should work.

"In terms of strategic depth, we're not removing it – we're opening it up"

The C&C series is famous for having big-name celebrities in its cut-scenes. So will Ric Flair be appearing anywhere?

I can categorically say that Ric Flair won't be back! We're not unveiling the cast just yet, but we're obviously delighted to have Joe Kucan back as Kane.

He's been with the franchise longer than anyone, right from the game's beginning, so it's great having him here for what's going to be the finale of the Tiberium Saga.

Will the Scrin be playable?

We're going to start out with Nod and GDI and see how the fans react.

How about the Forgotten – humans who've been mutated by exposure to tiberium?

They were prominent in *Tiberian Sun* and we're going to have a few units in there that can be recruited to your cause. We can go a bit crazy with them as they've been affected by tiberium, plus they've got a kind of cool little fiction as they've been cast away in society, so they've got their own agenda and background that we can use in little side stories.

So yeah, we're going to have more units in terms of the Forgotten than we've had in our previous games, which can be recruited by both the GDI and Nod.

Will there be any exploit-ish tactics, like piling Engineers into an APC and unloading them in the middle of the enemy base and capturing everything instantly?

The structures that we currently have can't be captured by engineers as they're like fire bases. You can resurrect the husks (vast mega-units that lie dormant on the battlefield) capture tech structures and so on.

That being said though, we do have some really powerful units – like the commandos – who can do devastating damage to structures, so you could load commandos into an APC and some of our high-end infantry units and drive that into an enemy base.

Actually, the Nod APC burrows, harking back to *Tiberian Sun*. We'll see how the fans react to that one, as they can sneak into an enemy base, pop out and spew out all their guys, causing this big firework show inside the base.

Are there any units that can detect hurrowing or stealthed vehicles?

The engineers can do that. As long as you have those guys scattered about in your army, you can detect stealth. We also have a few structures that do it too, so there's a definite counterbalance to the burrowing. But if you get caught off guard, Nod can really take advantage of you.

Phew, just in time: this is a GDI mothership.

Last warning!

ETERNAL LIFE

The respawns, which could be unlimited or regulated by the chosen difficulty level, will also go some way to helping players alleviate the frustration of sudden rush deaths. Vessella believes that C&C4 will be more layered strategically than previous games in the series, with longer missions than in Red Alert 3 and more changing up of tactics because of the extra mobility provided by the Offence and Support classes.

the balance of power towards a middle

ground, where people who don't even

know what a hotkey is could have a chance of putting up a good fight.

Finally, we come to probably the biggest change to the C&C formula persistent XP. Killing units, destroying structures and completing objectives all earn you experience, which allows you to unlock new units to use later on in the campaign. However, this can also be earned in the skirmish and multiplayer modes. We think this could be rife for

In fact, it will be a definite bonus for inexperienced players who can "buff" themselves with practice in the other modes, bringing better units to the difficult campaign mission they previously failed to crack.

One thing we're aware of that has a sour taste is that *C&C4* needs a constant internet connection. EA say it's down to players' progress needing to be tracked at all times. So it's not DRM... sort of.

It seems to us that C&C4 could be the game that brings back players bored of the same old mechanic used since, effectively, 1995. While not reinventing the wheel, EA Los Angeles have definitely gone beyond the minute token changes we so often associate with big name releases from established franchises. Whether these alterations work or not is a matter for you yourself, depending on your love/loathing of the base-building RTS mechanic, but what we're certain of is that, for the first time since the late '90s, the guy writing this piece is looking forward to playing Command & Conquer. That's definitely saying something.

HANDS-ON, BATMAN!

ASYLUM

Becowled, David Brown prepares to sneak up on a clown

E batmanarkhamasylum.com Square Enix Europe

REATING AN IMMERSIVE atmosphere is key to the success of any classic game, but never more so than when you have to capture the essence of a beloved character like Batman. So Batman: Arkham Asylum could easily become the gaming equivalent of Bob Hoskins in Super Mario Bros or Mark Wahlberg in Max Payne. It had to be a concern when this new Batman game was first announced and, until you've actually had a chance to get your hands on it, it'll probably remain one.

NO BORKMAN HERE

Thankfully, any question of Rocksteady borking Batman in a Joel Schumacher style can be dismissed - there's no question that Arkham Asylum will be nothing but pleasingly great.

While I'm no expert on all things Batman, it definitely seems to sit perfectly in the universe the Caped Crusader inhabits. In fact if there's one thing that strikes you about Arkham Asylum it's the atmosphere, which feels perfectly dark and disturbing. Part of this is down to the rendering of the characters in cutscenes, but mostly it is because of the superb voice acting.

THE LOWDOWN

- Looks great
- Runs great
- Loads of stuff to do
- Great atmosphere
- Combat too simplistic?

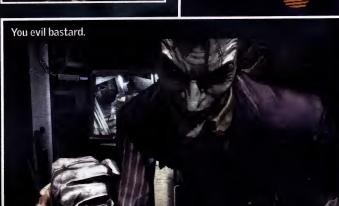

The supporting cast does an excellent job of making the world come alive, much like in the Chronicles of Riddick games, which Batman definitely pays tribute to in the extensive opening sequence where Bats escorts the Joker deep into the Asylum's complex. Mark Hamill is particularly great as Joker, providing an excellent foil to Batman's straight man routine. You'll never tire of being interrupted or pestered by the madcap psychopath – Hamill's performance really is brilliant.

Hamill is joined by Kevin Conroy, who has voiced Batman's appearances in cartoons since 1992, starting with the classic Batman: The Animated Series. Reuniting Hamill and Conroy certainly adds to the atmosphere of authenticity Rocksteady are trying to create, although Conroy's performance means you may be a little bit bored with Batman's role, dulled as it is by his stoic attitude in every situation. Still, we're confident it won't make too much difference, the interplay between kooky villains and a stoic iron-jawed hero being something tried and tested through the ages in various different types of media.

There's also absolutely loads of stuff to do. The main storyline is good enough to keep you forging forward, but the sheer amount of optional items to search for is mind-boggling. Riddler tokens, strange Spirit of Arkham symbols, and interview tapes are just a few of the things you'll be scouring the undergrowth to find. Intricate level design has been a major part of the development process, with many of the more expansive areas (such as the the Asylum's grounds) containing a large array of nooks and crannies to explore. Keep finding these objects and you'll unlock a whole host of extra goodies that you can ogle from the main menu.

If you've played The Witcher, you'll have a good idea of how Arkham Asylum's combat system works. Clownmasked thugs approach you from various angles - often in large groups and you left-click to thump them. If one

decides he wants to try doing the same to you, shiny blue indicators appear above his head that tell you he's about to come a-clobbering. A swift right-click will put paid to his nefarious ideas, delivering a quick counter-attack to send the assailant flying.

BIFF BASH KAPOW!

Stand-up melee combat is tempered by the use of stealth, which looks to be infinitely more satisfying. Perch on a conveniently placed, and shadowed, gargoyle and wait for an enemy to wander from the pack. Then you pick them off one by one. That is the best way to approach combat in this game.

Most places where bad guys gather seem to have multiple places to strike from. Once during this playtest I hid Bats under a grating in the floor, letting him pop up behind a thug to deliver a silent takedown, before zipping up to a gargoyle. From this vantage point I watched as fearful confusion spread

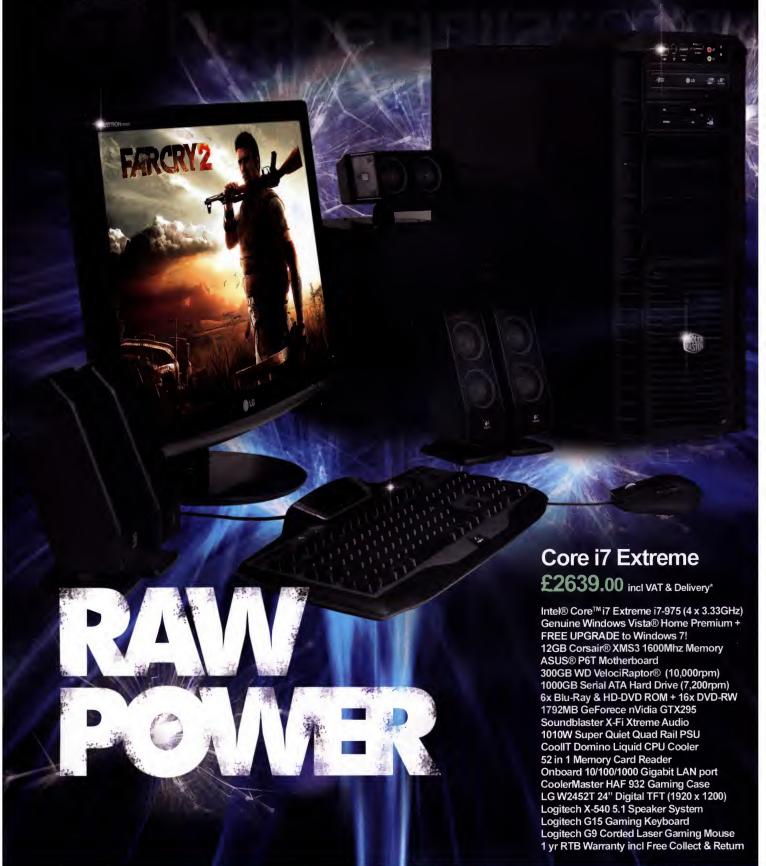

among Joker's goons, before swooping down onto them.

In terms of plot, environment, atmosphere and all that sort of gubbins, we're certain Arkham Asylum will satisfy all but the most nitpicking of fanboys. But hold back from soiling your official Batman duvet in fevered anticipation just yet, and wait until next month's review when you'll see our final verdict on Rocksteady's effort.

physics and trajectories implemented properly, tears out your windpipe and you choke to death on a mixture of your own blood and the mud you just collapsed into. Then you realise you're a hardcore military simulation.

That's just how things go in the world of ultra-realistic military games, such as Operation Flashpoint and its rival ArmA. Death can come from anywhere, at any time and with extreme prejudice, as they say in the US.

From what we've played of Operation Flashpoint: Dragon Rising, it isn't just a jollied-up action-fest tainted by the foul stench of console corruption. While you can see nods to the machines our half-

brothers insist on using, like the radial menus used to give commands to your squad, that doesn't mean this sequel is a watered-down arcade game. In fact, while we wouldn't say it's as brutally realistic as ArmA II, only the insane will scoff at Dragon Rising for not being realistic enough.

BE VEWY QUIET

The preview build we got our hands on contained two missions, but both of these were large enough in scope to indicate that there's going to be plenty to get stuck into when the full game arrives.

The first was your standard infiltration mission: you lead a four-man

team on a guest to disable a Chinese early-warning system, enabling your fleet to get into position without alerting the main enemy force to their presence.

After completing this - it has to be done within a certain time frame or the fleet has to abort the mission - you then move on to securing a coastal village and a landing zone, or perhaps even driving around looking for secondary objectives to complete. Interestingly, fulfilling one of these opened up another one, so pursuing these seem to be worth it.

Send the grunts in first then take the glory once a mission has been completed. Easy.

Early builds of the game made us slightly wary of how the AI – both enemy and friendly – was going to pan out. The usual assurances were bandied about by Codies - claims that everything would be OK in the end, glitches would be fixed before release and so on. Usually this sort of thing is treated with an "Of course," and a resolute "...but we both know it won't be," spoken quietly inside your head. However, we've been corrected on this one, as the AI is definitely much, much better than it was before.

While we're not going to go on record and say it's 100% perfect - a game of this scope will never be bug-free, especially with its AI routines - but from our experiences, there aren't any soldiers refusing point blank to get into jeeps or dead Chinese soldiers riding around in a ghost car.

GOOD LOOKING

You've probably taken a good look at all the pretty pictures dotted around these pages already. You may even have chuckled at some of the mildly amusing captions too. Let's concentrate on the pictures though, for now.

Dragon Rising is using a bucket-load of the same code as GRID and the upcoming DiRT 2, so the engine is robust and shouldn't fall over very often. What it also has is a draw distance of approximately 32km, so you can stand on top of the dead volcano situated on the eastern side of the island and, provided the dynamic weather conditions

"Only the insane will scoff at *Dragon Rising* for not being realistic"

What's that thing on his helmet?

UPFRONTHANDS-ON

MIKE SMITH ART DIRECTOR AND TIM BROWNE SENIOR GAME DESIGNER

BRINGING WAR INTO YOUR HOME

Will the editor be easy to use or techy gibberish?

Tim Browne: You can set the date, time of day, weather, that sort of thing. So, it's very easy to do the basics, but of course it can get very complicated. Literally, for a person totally new to it, it's as simple as point and place. We've got all these different fire teams to put down, all these individual soldiers to choose from and we have squads to choose from. Same for the People's Liberation Army and vehicles. Once you've done that, you just click play and it'll export it to the game engine and you can play it.

Can you put every unit in the editor on the map?

TB: A very powerful PC could probably handle that, but I wouldn't try it on a Netbook or anything. **Mike Smith:** We can't wait to see what people do with the editor, to be honest.

TB: Yeah, it's definitely something we're really excited about from the PC perspective. As soon as the game's out, we're expecting, within a week, to see all sorts of missions out. We have a team of 10 mission designers, but when you open it out to thousands of people it changes things so much.

Did you put in that secret ninja base we asked for when we last spoke to you?

TB: Sadly there's no hidden base in the extinct volcano. We know you wanted it, but as senior designer I had to say "No, stop right there." Who knows, maybe it'll appear in the DLC or an update? I'd rather focus on the core game, so there aren't any

Easter Eggs, but you don't know what the coders or mission designers might have put in. As far as I'm aware, there aren't any.

MS: It's such a huge island that only certain areas are focused on for the campaign.

TB: Like the quarry. That's one of my favourite areas but it's not used in any of the missions yet. We've got a lot of AOIs (areas of interest) in the game.

MS: That's a dev's term. I mean we've got this huge island based on satellite reference points, but we really go into detail in AOIs – settlements, fuel stations, ports, airports, that sort of stuff.

"We wanted to get the core things really great, which is infantry combat"

If you fall off down a slope, do you break your legs or just die?

TB: Falling, yeah, you'll have falling damage, but you have to get to a place where there's a sheer drop.

Most of the time you'll just slide down a slope. There's no jump button because you're carrying this 80lb pack, which makes it tricky to leap about.

MS: It also wouldn't fit if you had loads of players jumping all over the place in multiplayer.

TB: There's various different injuries, you can see where you're bleeding from. What you do is get the field dressing out, which is the equivalent of using bandages and tourniquets. What it doesn't do is heal the wounds, it just stops the bleed metre. If your legs get damaged, you can't sprint any more and your aim is worse if your arms get injured.

What you can do is call the medic over, who'll give you a shot from a syringe. That'll remove your ailments, something we felt was necessary for things like multiplayer, so the medic has more of a purpose.

Can you use the magic syringe in the hardcore mode too?

TB: Yes, but you don't get your blood back.

Tell us more about the competitive multiplayer modes.

TB: We've got Annihilation mode, which is your basic deathmatch-type game. We find chokepoints on the island and get players to gun it out.

The other cool mode we've created is Infiltration, which is purposefully unbalanced. Ten members of

the US special ops go up against 22 regulars from the Chinese PLA. On the PC, all of the soldiers can be controlled, unlike on the Xbox.

We noticed a combat knife. How easy is it to get in close and stab someone up?

MS: No, it's very, very hard. You can do it though – in the dead of night, just crawl up to people.

Can you be sheep and cows?

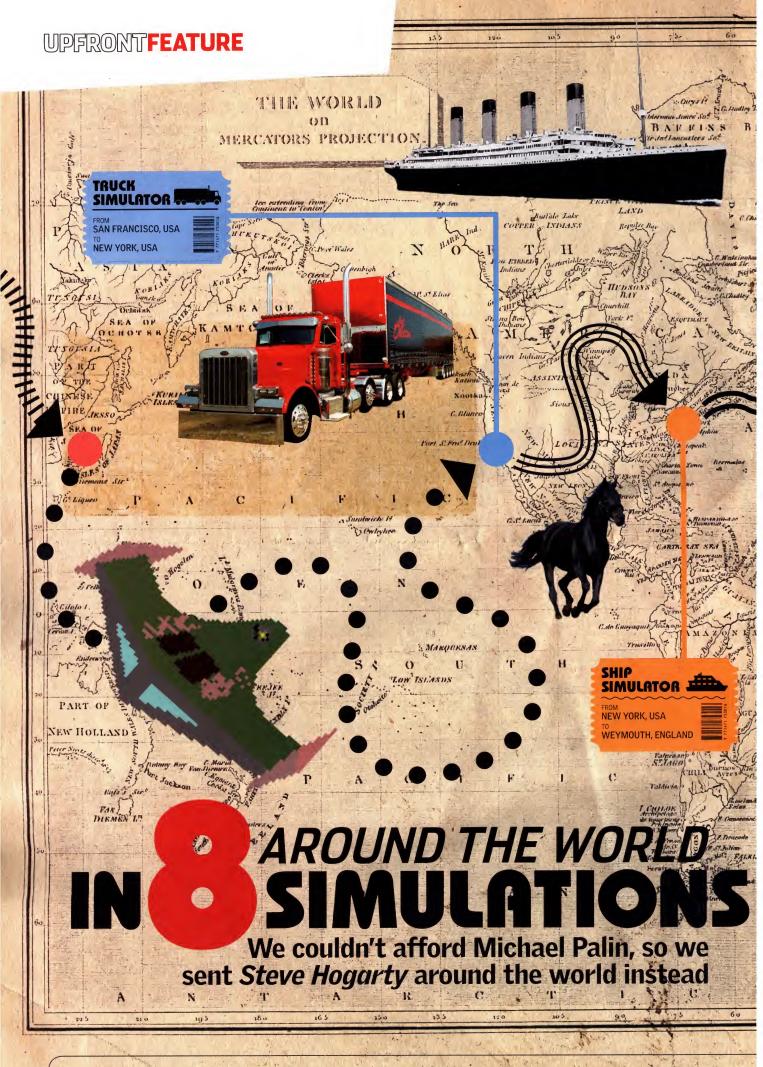

TB: No, we also don't have civilians in the game. We wanted to spend more time focusing on the character models, as we've had unprecedented access to the US Marine Corps, who gave us all sorts of information. The last thing they'd want us to do is to put civilians in that you can shoot and be basically as war criminals. We also didn't want to put the PLA in a nasty light, like they deliberately kill civilians. You will come across the occasional body – oil refinery workers – and other things, but we wanted to focus on getting it looking great.

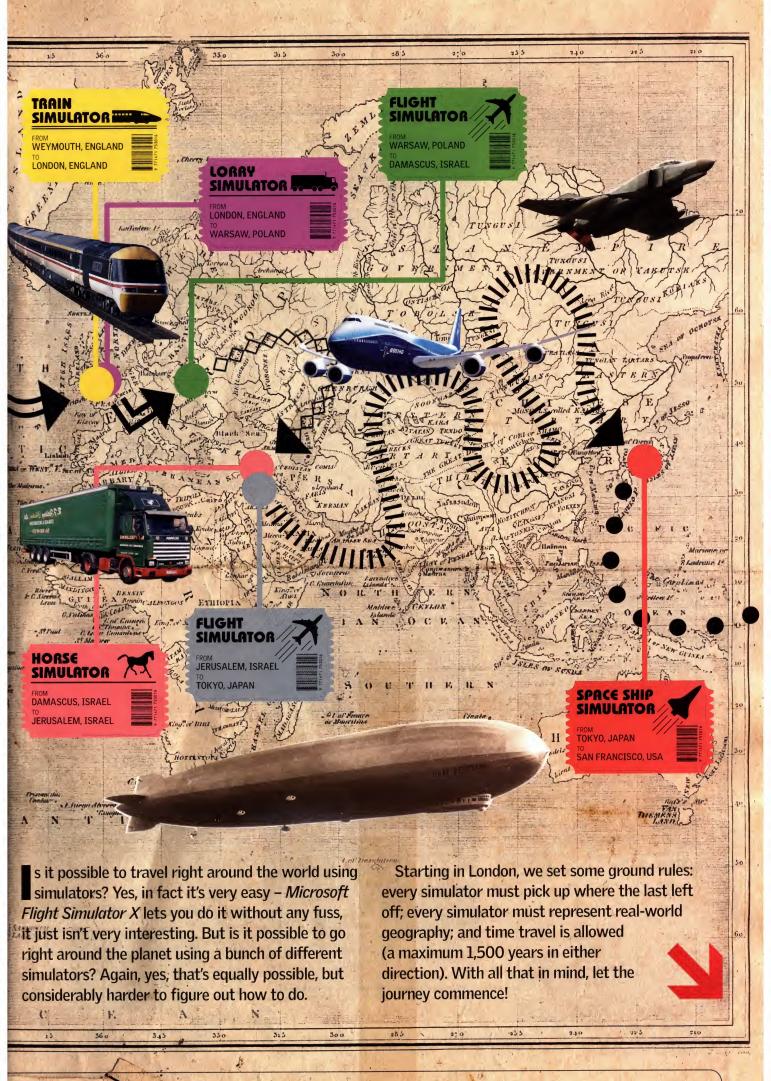

MS: That's the key thing, we wanted to get the core things really great, which is the infantry combat. We're going to expand on that with DLC later, but the core experience is what we feel people really want.

I told you they wouldn't see me coming.

EURO TRUCK SIMULATOR

LONDON, ENGLAND **WARSAW, POLAND** 1,329 MILES

NBRIDLED, SCREAMING OPTIMISM powers our Scania truck along the first leg of our epic journey - from the PC ZONE offices in London, down the M20 (itself a part of the European route E15, road fans) to Dover. Reaching speeds of 55mph, this isn't the fastest section of our trip but it's easily the most relaxing. The drastically scaleddown, leafy scenery rolls by, and the gentle rocking of the cab has a lulling effect. In our Sussex-induced stupour we miss at least one turn-off and career headlong into oncoming traffic for a good 40 miles. Frantically flashing our headlights and swerving from lane to lane sees us through safely.

Catching the ferry to Calais brings us to the Continent, and from there we plot a route through Frankfurt in Germany before trudging onwards to Warsaw in Poland. It should be noted that, for the authentic trucking experience, we acquire some cargo in the form of a container of ice cream.

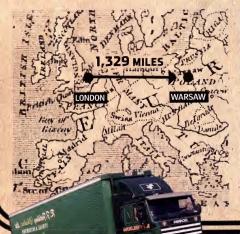

LONDON - As long as nobody sees you pull off the road and smash through a small wooded area near Haywards Heath after missing your turning, it didn't legally happen. Apparently.

DOVER - The ferry to Calais sets us back a pricey €315. If we hadn't been paid to smuggle 14 Russian migrants in on the way over, we'd have been broke.

FRANKFURT - Having drifted off twice on the autobahn, we kip in a lay-by. Without a dead prostitute in the cab, we sleep restlessly in an unfamiliar land.

WARSAW - The Polish capital is just as spectacular as the fairytales promised, and we pull into Frederic Chopin International airport to catch our plane.

ASSASSIN'S CREED

DAMASCUS, ISRAEL JERUSALEM, ISRAEL 134 MILES

SHORT STOP off in Israel, but a very important one. Though Assassin's Creed is a game about a man with a sword and a burning hatred of Christians (or something), it also simulates the land connecting Damascus and Jerusalem. The distances are relatively tiny: where the real world cities sit 134 miles apart, the virtual renditions are a short horse ride from one another. Nevertheless, the journey must be made, and make it we shall do.

We whip a brown horse hard out of Damascus. Doing this in Assassin's Creed is highly illegal, and we attract the attention of some guards who'd clearly rather chase a man on a horse than guard the thing they're supposed to be guarding.

A few gruesome tramplings later, and with more than a couple of dramatic leaps over fallen palm trees, we arrive at Jerusalem. We find the spot where we reckon they'd build an airport in about 822 years, and wait.

DAMASCUS - Gallop, gallop, gallop. Horses were the fastest form of transport back in whenever Assassin's Creed is set, and also the most offensive to guards.

COUNTRYSIDE - If a real horse were to cover the real distance in the time it takes to do so here, that horse would have to travel faster than the speed of sound.

munumumumumum

HORSE FACTS... CONSIDERING THE ACTUAL DISTANCE BETWEEN DAMASCUS AND JERUSALEM IS **134 MILES...**

Suggested speed of horses in Assassin's Creed: 1,500mph

Muzzle velocity of an M16 rifle: 2.192mph

Maximum speed of a Concorde airliner: 1,447mph

JERUSALEM - And so our supersonic horse trots gallantly into Jerusalem - looking justifiably pleased with itself. Now we wait for airports to be re-invented.

G. Grene

WARSAW - Flight Simulator X prides itself on its extensive simulation of actual air traffic control sequences. But you can't say rude things, sadly.

TURKISH AIRSPACE - Bored, we - oh no! Bombers on board! An exciting shootout takes place, whereupon we kick a terrorist in the neck... in our imaginations.

DAMASCUS - What a lovely airport you've got. Straight bit of asphalt is it? Yeah, it's been done before but I think you guys brought your own flavour here.

MICROSOFT FLIGHT SIMULATOR X

WARSAW, POLAND DAMASCUS, ISRAEL 1,503 MILES

OUTTING OUR TRUCK to the side, we taxi through Frederic Chopin International in our Boing 747 and request a bit of clearance from air traffic control. An American air traffic control man answers, and barks a swarthy "clear for lift-off" at us. Oddly, there are no Polish air traffic controllers, or indeed controllers of any other nationality working at any airport on the planet.

Not only does Microsoft Flight Simulator X fail to represent the hard-working multi-national air traffic controllers of the world, it ignores current airspace restrictions. We swoop in over the West Bank without a care in the world, and land at Damascus International Airport where we're accosted by a time wizard's untoward magical advances. We suddenly find ourselves tumbling through a tunnel of grandfather clocks to arrive in Crusader times!

X-PLANE

Wintere 1

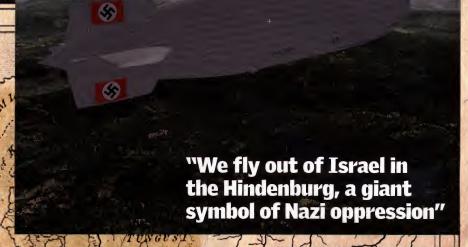

JERUSALUM, ISRAEL **TOKYO, JAPAN** 5.700 MILES

TAROT AIRPORT HAS been built, and planes have been invented shortly thereafter. and so the stage has been set for the second leg of our airborne adventure. Rather than slip back into the comfort of Microsoft's shiny flight simulator, we're going to indulge in a bit of the rough stuff with X-Plane. Where Bill Gates prefers to imbue entire aircraft with their researched properties such as lift and drag, X-Plane computes all of this science on the fly for individual wing segments, meaning (in theory at least) that it's a far more accurate simulation of flight and one that can be adapted to easily include a wider variety of aircraft. We could've chosen anything for this leg, from the space shuttle to the Concorde, or an inoffensive bi-plane.

So we fly out of Israel in the Hindenburg, a giant symbol of Nazi oppression. This involves installing three DVDs' worth of global scenery and suspending your disbelief that such a journey is even possible, given the slowness of a Zeppelin and the likelihood of being justifiably shot down.

Jerusalem's military run airport. The symbolism is far too complex for us to decipher.

18 WHEELS OF STEEL: AMERICAN LONG HAUL

SAN FRANCISCO, USA **NEW YORK, USA** 2,578 MILES

E'RE IN SAN FRANCISCO, still shaken from our time-based escapades, but with a resolve so stiff you could iron your stinking, salty undergarments on it. Not that we have any intention of laundering our jocks, because it's time to get back into trucker mode, and as we all know, truckers are filthy bastards who do shits in the back of their cab.

Starting out in sunny San Francisco, we set a course for Interstate 80, a road almost 3,000 miles long. That's long enough to completely encircle the United Kingdom and its wise-cracking sidekick, Ireland, and would create a perfect platform to ride menacingly around the islands on a BMX shouting taunts at them through a megaphone.

Our limited funds mean we must avoid breaking laws and incurring fines while here. Of course breaching the law for us is completely inevitable.

ST. LOUIS - That said, there are few sights here. We arrive at night, the streets are empty, and we only stop to eat some Generic American Food Product.

SAN FRANCISCO - 18 Wheels features an accurate depiction of the Golden Gate and its local area. And that's probably what this trip is about: sightseeing!

FLORIDA - We're here! Our analysis of the USA: the only bits worth seeing are the coasts, which are separated by 3,000 miles of filler.

NEW YORK - It's the Titanic, look! The bloody Titanic! In New York too! The things these simulators can achieve these days. What a sight.

STILL NEW YORK - Christ, this thing is slow, but the Titanic's surprisingly tight turning circle (for a giant ship at least) makes navigating the Hudson a doddle.

ATLANTIC OCEAN - The weather turns on us. We press the button to make Kate Winslet put her clothes back on and return to her cabin.

WEYMOUTH - As Weymouth's docks aren't present in Ship Simulator 2008, we're forced to smash the Titanic into where we reckon they'd be

SHIP SIMULATOR 2008

NEW YORK, USA **WEYMOUTH, UK** 3,390 MILES

OW, THOUGH OUR boredom thresholds are not those of mere mortals, Ship Simulator's torturously slow journey across the Atlantic has us chewing at our limbs in frustration. The Titanic can only manage a mere 25 knots in good weather (that's 28mph), it takes 25 minutes just to get out of New York.

Once we're out in the open seas however, the vessel doesn't need much attention paying to it. We minimise the window and totter off while the mammoth boat crawls across the ocean. After all, what ill could come of leaving the Titanic unattended? None. Especially as Ship Simulator 2008 simulates neither icebergs nor kraken.

Thankfully, although the voyage should take five and a half days, the game drastically reduces the size of the ocean to the point where it took mere hours.

HUNDERING PAST THE platform in Poole and leaving a host of filthy commuters shaking their fists at our speeding train was easily the most thrilling segment of our epic journey. And as the end was in sight we wasted no time in our race to the finish, bypassing stations and rocketing towards Waterloo at speeds which would throw the National Rail regulatory committee into a paralytic rage.

Odd noises pinged around the train's cab. An alarming chime which became more urgent as we struck 100mph seemed to congratulate us on our incredible speed, a metallic screech as we rounded corners was surely the wheels performing at their optimal grip levels, and the imagined screams of the passengers as we hurtled through Dorset was their way of saying, "Well, this is all rather fun isn't it?"

By the time our destination sprung into view it was too late. Frantically hammering keys in search of the emergency brakes proved fruitless, and we sailed off the tracks and through the buildings, ghostlike. And here our journey came to end. We were home.

WEYMOUTH - Yup, this is definitely Weymouth. Look, there's a Dorset Birch, a species unique to this area and used by locals as a potent aphrodisiac. The buggers.

TUNNELS - You know how your ears pop when you enter a tunnel? We're going so fast that we came out looking like the inside-out monkey from The Fly.

N CONCLUSION.

HOUGH OUR TRANS-GLOBAL escapade was a success, it also highlighted some concerns with the current state of the simulation genre. Why were ACES shut down before they could finish Train Simulator 2? There are parts of the planet that have been meticulously recreated, and parts that in simulation terms are black holes. Getting through Europe isn't a problem, but once you hit anything with even a whiff of communism about it you run up against a simulator dead-end. You can't ride a train through Siberia or truck your way across China.

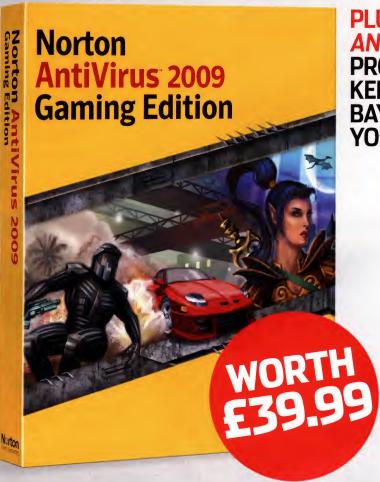

Train Simulator 2 would've solved this by being the first train simulator to offer a global network of procedurally generated railway lines based on

real, existing tracks. This would've also meant that, for the first time ever the Trans-Siberian railway would've been included in a train sim. Do you even understand what an advancement that would've been? We

do, having been stuck playing these bloody simulators for well over a week, and starting this feature with the assumption that somebody could've been arsed to create that famous 9,000km long train route. Sigh. FEZ

KEY FEATURES OF NORTON ANTIVIRUS 2009 GAMING EDITION

- New Gamer Mode keeps you protected but won't bother you while you're in the middle of a game. Suspends updates, alerts, and other background activities and is automatically enabled when system is in full screen mode, or easily manually enabled.
- Smart scheduling holds resource intensive actions such as system scans for when the computer is idle.
- Industry-leading protection from viruses, spyware, worms, Trojans, keyloggers, bots and infected websites.
- Customisable security settings allow gamers to reach the performance and protection balance they require.
- Performance driven release installs in under a minute, uses less than 6MB memory, adds less than one second to boot times, and scans in under 35secs on average.

GAMER MODE

- No alerts + no notifications = no interruptions.
- Optional settings to temporarily suspend updates, behavioural scanning and intrusion prevention.
- Enabled automatically when your PC is in full screen mode.
- Activate manually with a quick click on the Norton system tray icon.

LIGHTNING FAST

- Rapid Pulse Updates every five to 15 minutes.
- Installs in less than a minute.
- Adds less than one second to boot time.

LIGHT AS A FEATHER

- Uses less than 6MB memory even without the Gamer Mode performance boost.
- Runs only two processes at a time.
- Performance graphs display CPU and memory usage and how little Norton is using.

RESPECTS YOUR NEEDS

- Smart Scheduler holds resource intensive actions for when you are not using your PC.
- Resource usage table shows you the what, when and how long for background actions taken by Norton.

THE CAPE AND COWL BRIGADE...

CHAMPIONS ONLINE

One MMO, three heroes, thousands of beetle things, and one cross-section of Cryptic Studios' superhero romp-fest spectacular

DEVELOPER Cryptic PUBLISHER Namco Bandai (Atari) WEBSITE championsonline.com

ROPERLY GAUGING THE the worth of an MMO in the time we'd typically spend plugging away at a more straightforward single-player game is virtually impossible. Where we'd review the majority of releases by scanning the back of the box, expanding on the bullet points and occasionally mentioning the graphics, this time we took the time and effort to launch a three-pronged attack on this world of superheroes, henchmen and cackling nemeses.

And so, three heroes are born. Steve slips awkwardly into the robotic guise of The Prospector, David assumes the role of buxom icequeen Plugheadia, and Richard becomes some sort of monkey thing. Together they're an unstoppable force, carving their way through Champions Online and laying the foundation for the definitive review that'll appear in the next issue.

For now though, here are their stories...

HE PR*OS*PECTOR

Who shall we turn to now that Millennium City is in danger? Why, Steve Hogarty of course...

ARRIVAL

When giant beetles rain from the sky in attack pods, who do the people call? Why The Prospector of course! The gentleman robot with a penchant for swordplay. But there's no time to celebrate my arrival into Champions Online's tutorial zone - the mayor has work for me to do!

Champions Online's first few hours are a hammer-fest. The Prospector had picked up two new moves: "slash harder and "slash a bit harder but paralyse too". Taking down this robotic henchman was a matter of tapping all three keys over and over while numbers spilled from his face. Hardly an engaging start, if we're being critical. Which we are

Z. RESCUE

The Prospector's aural-nodal listening receptacles detect the shrieks of a lady in distress, leading me to my first quest and a break from endlessly slashing at beetle-faced aliens with my swords. Sadly escorting this girl to safety requires slashing at beetle-faced aliens with my swords.

With the beetle battalions returning to space, the city hosts a celebration of mine and Plugheadia's victory. But with the quest to enter the Champions HQ having disappeared from my quest log, people are only cheering for the frosty-nipped cow. The Prospector is thoroughly ignored, even though I did most of the slashing.

3. FIGHT

Now the police chief has me killing ever larger beetles, ones with special moves which, if left unblocked, will knock me off my feet. Thinking back to the time I spent learning to press the block button (Shift) with the mayor leaves me well equipped to deal with this new threat

Having reached the heady heights of level five, I team up with the ice temptress Plugheadia to rid the city of the beetles once and for all. Except it's a repeating, group quest for new players. Collect the crates and fire the giant cannon, again and again from now until forever. Hmm, depressing.

Right before you move out into the greater world, you get your first travel ability - your way for zipping about at speed. As a prospector, The Prospector was sorely tempted by the tunnelling ability, but as a robot from cowboy times he was naturally attracted to rocket boots.

DR LIVINGSTONE

When Canada is invaded by frozen undead they turn to a big ape – *Richard Cosgrove* to be precise

ARRIVAL

After single-handedly saving Millennium City from being invaded by alien invaders (just like the hundreds of others of superheroes before him, given the city is locked in a hellish time loop) Moreauvian man/ gorilla cyborg Dr Livingstone arrives alone in the icy Canada wilderness. At first he thinks he is the only superhero determined to rid this land of this plague, but then he spies another. But this one refuses to budge from his spot. How utterly unheroic of him.

ALONE IN THE SNOW

So our hero (one of those people with superpowers that actually get things done) finds himself alone in the glacial and demon-infested lands, agreeing to pull a bunch of Canucks out of frigid waters. While this sounds an easy task for our vivisected chum - who did stop an alien invasion by himself - accepting this mission turns out to be a very, very bad idea.

CHAMPION

Having ended the invasion (for what could be the thousandth time) we visit the Champions HQ. Here we ind that the beetles are here because Doctor Destroyer rovoked them into attacking! Using the Shift key to pick ip objects (a first for MMOs of this kind) The Prospector hrows furniture about the room in impotent rage

The irradiated deserts of New Mexico host one of two of the first big adventures you'll undertake. Racing ahead of my cohorts, I sort out the mess in double-time and revert the place to its non-irradiated and healthy state. But only for me, as I'm now unable to return to the time when the desert needed saving to help out my fellow heroes.

XENOPHOBES

What's with "Great White North"? Is Canada where BNP MPs retire, once they tire of Lancashire? If so, I'm not sure I want to be helping this load of racist scum out.

5. MOOSE

Come on - is this guy really meant to be scary? He has a moose's head! They're one of the least threatening creatures in the world. They're so non-scary they got a squishy dessert named after them. So what if it's a skeletal head, it's still not frightening. So this guy won't be any probs

so it's deliciously ironic that he should rescue White Supremacists, So I quest on, rescuing whimpering soldiers from the undead. Judging by this cowering figure, Cryptic hold Canada's military in high regard.

6. YOU FOOL APE

After one brief fight - more like an execution - Livingstone respawns, and learns a lesson: if he sees anything with a skull for a head that's still alive, he should run away.

This Ice Shaman has trapped our hero in a block of ice, from which he must escape. As the game doesn't tell you how to do this, there's little else to do but wait for the ray blast that'll kill Doc Ape once more

After respawning (again) staying inside the compound sounds good. But in here zombies are disguising themselves as soldiers! A gadget will sort the people from the corpses.

TO THE DESERT

'Sod this for a lark," thinks Dr Livingstone. "It's freezing cold. My boots are full of slush. My robotic leg's rusting up. There are zombies everyfreakingwhere. And I'm a frigging gorilla - what the hell am I doing here? Let's go somewhere warmer. I hear Arizona's pleasant this time of year..

WE DON'T NEED ANOTHER HERO

We need about three, actually...

THE PROSPECTOR

In 1888, the impossible came to pass. A meteor from a far-flung solar system entered Earth's atmosphere, blazed through our skies and collided with the workshop of one James Watt. In the midst of the debris an alien device whirred as it surveyed the scattered components of an unfinished steam engine. As Watt cleared the wreckage, he'd notice clockwork devices spring to life and scuttle away, and as he lifted the final improbably large metal cog he discovered a living metal man.

You must be some sort of sentient difference engine from the meteor," Watt surmised, "and you've assembled yourself into a humanoid-esque lifeform using components of a steam engine because you saw me.

"Yeah," replied The Prospector. "Are there are any crooks about?"

DR LIVINGSTONE

Kidnapped from his home at the gorilla enclosure in London Zoo 'Doc Ape' was take to the island and experimented on by a man calling himself Dr Moreau.

Moreau's insane experiments in vivisection and cybernetics were too successful, and Dr Livingstone went from being a large peaceful ape, to a large, angry and hyper-intelligent cyborg ape.

After reading every book in his creator's library and taking the name of the famous explorer, Dr Livingstone escaped from Moreau's lab complex, vowing to take

revenge. But Moreau has vanished, and Doc Ape doesn't know where his nemesis is, despite searching the world

PLUGHEADIA

Plugheadia's story is a sad one, her life plagued by calamity and disaster.

A freak plastic surgery accident left her permanently disfigured in the frontal area. To make matters worse, a wild night out on the beers left her falling drunkenly into a freezer unit at her local Iceland.

Amazingly, a magic box of Findus Crispy Pancakes imbued her with the ability to shoot ice from her hands. Blasting her way out of the freezer, she vowed to don the tightest spandex outfit imaginable, adorning her belt with the skulls of her victims, and to fight crime and campaign for better security and locks on refrigerators in cut-price supermarkets all over the world.

She also managed to find a great 2-for-1 deal on beef burgers and fish fingers too, which can't be bad.

PLUGHEADIA

Arizona is in trouble and needs a heroine (due to sexual equality laws), so they call on David Brown

1. ARRIVAL

When insectoid aliens menace the populace of a fictional futuristic city, there's only one person to call on: a 7ft tall Amazon with red highlights and two beachballs shoved in her spandex top. No enemy could possibly cope with the hypnotic sight of Plugheadia's (yes, I have no imagination) frolicking funbags distracting them, certainly not long enough to avoid the chilling blasts of her super ice powers. She wears flame red clothes, but she shoots ice. Oh, the irony.

4. WITCHCRAPT

While The Prospector decided to beat mutants around the head with his mighty weapons, Plugheadia's job was altogether more domestic. Cries of "Why do I have to do the housework just because I'm a woman?" fell on dear ears. Disgruntled, Plugheadia attempted to divine the secrets of the mystical arts, a perplexing array of ingredients, menus and scroll things lined up for her on the mixing table. After halfan-hour, a couple of low-powered amulets were all she had to show for her efforts.

5. BACK IN THE GAME

Sick of waving her arms around to improve her Mysticism ability, Plugheadia ventured back into the irradiated wastes, leaving the pillowy bosom of the Project Greenskin safe zone to make some progress in her quest, which was to eliminate some mutants, then some tougher mutants and, finally, some very tough mutants who were led by a big red guy. Who was also very, very tough

7. GORILLA SHOOT-OUT

With the acrobatic man-monkey Dr Livingstone using his sonic pistol to aid myself and The Prospector, the forces of evil were quickly pushed back. And the new-found ability to create an ice storm helped Plugheadia to rid the world of Grond's grotesque lieutenant forever, and the heroes recuperated for one final assault on the green bastard's underground lair. The world would never be safe until they succeeded in their mission.

Z. SPIT ROASTED

The Prospector was an able ally, slashing bugs to bits with casual abandon. It obviously helped that most of them had been frozen solid by the cooling rays of Plugheadia's ice hands, but they all end up dead anyway. Needing a challenge that doesn't involve pincers, she followed The Prospector to the Arizonan desert, where irradiated misfits and strange red and blue goliaths waited to feel her frozen wrath.

LCE CAPADES

While The Prospector decided to go with pansy rocket boots, Plugheadia knew there was only one way to get about - sliding around on a big sheet of ice. The heat of the desert could not melt its frozen glory, although she was fond of falling over a bit and injuring her back. Maybe her breasts were just so large it affected her balance, who knows. The irradiated scum still feared her bosomy assault regardless.

6. THE APEMAN COMETH

Meeting up with The Prospector, Plugheadia went through the motions of killing some mutants and getting experience from mission givers. It was all leading up to a colossal battle between our two heroes and the evil Grond, a mutant of incredible strength and power. His lieutenants were first, though. For some reason, the enemies had decided to fight back a bit and even the might of Plugheadia and The Prospector couldn't defeat them. Then a big hairy ape turned up out of nowhere (OK, a spawn point) to help.

Well, it seemed that time wasn't pressing enough for our heroes to bother getting around to killing Grond. There were other things to worry about, like how far a character could fall without killing themselves and some "Ooh, look at this cracked ground effect when you land from a great height," cooing. Grond would have to wait, it was time to explore the skies and attempt to do gorilla back-flips.

. DESERTED

The Prospector had enough and went off by himself, unbeknownst to Plugheadia and her fellow superhero Dr Livingstone, Amazingly, the sword-wielding robot managed to defeat Grond entirely on his own, laughing at the notion of teamwork being needed. Because of his success, he was thrown into an alternative dimension (OK, a new instance), and left Plugheadia and Dr Livingstone to cope on their own. What a git.

CONCLUSIONS

What the team thought...

THE PROSPECTOR

"A few hours in, and Champions Online has me properly hooked. Having only ever spent any real MMO-time in EVE Online and World of Warcraft it's jarring to approach a game in which, rather than constantly upgrading your armoury with increasingly unique weapons, you're instead augmenting your character

with trinkets. It's much the same thing in practice, but at this early stage the upgrades lack the physicality of a rare sword or shiny spaceship. Naturally, your character is meant to be your weapon, and superpowers are doled out in a gratifying way - but the simplicity of an awesome new fiery axe is lost here. Also, it's hard to show off a necklace that gives you +9 dexterity. Maybe I'm missing the point."

DR LIVINGSTONE

"Despite the dearth of players during its beta testing, Champions Online is doing the right things. Which isn't a shock as it's heavily modelled on the enjoyable City of Heroes: superheroes team up, kill baddies, collect bonuses, climb levels to pick up new powers, and repeat. But whether Champions will be able to beat

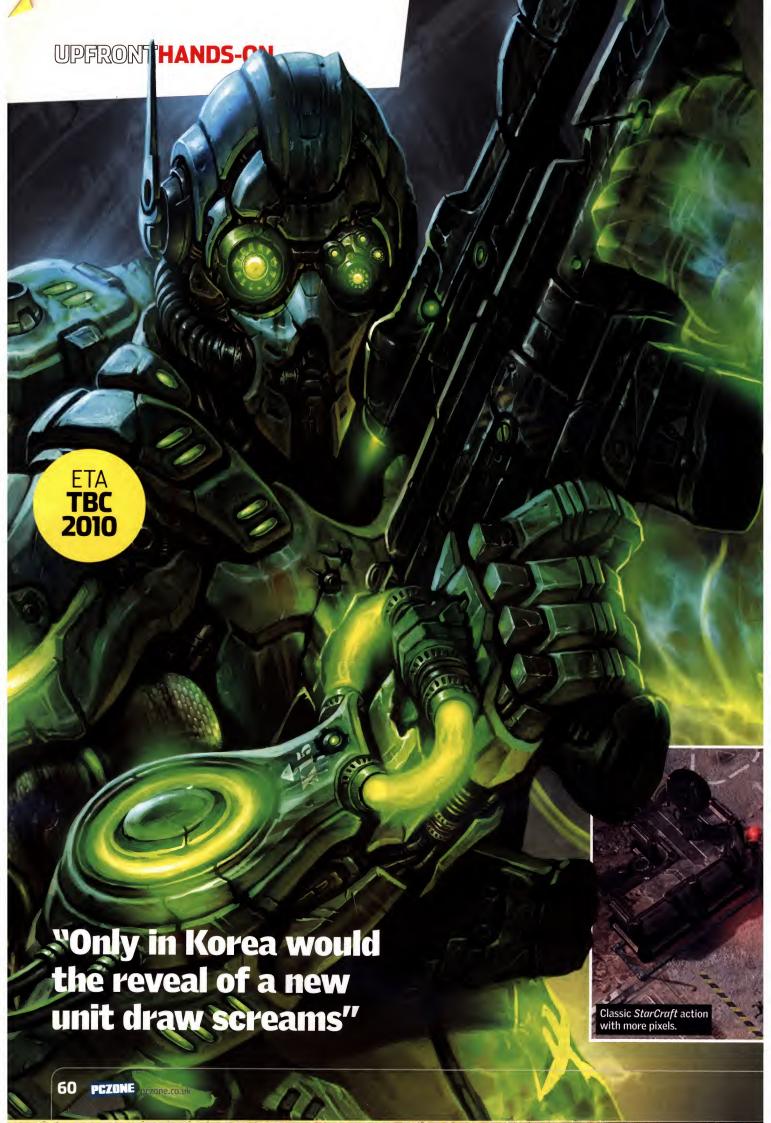

competition from City of Heroes, and the upcoming DC comics MMO, will come down to whether it'll have anything unique. As DC's MMO will have Batman, Wonder Woman and Superman and the rest of the DC Universe, and City of Heroes offers continually upgraded gameplay, the Architect mission designer, and the opportunity to be a supervillain and become another player's real-life nemesis, right now it's hard to see what more Champions Online can deliver."

PLUGHEADIA

"Like all MMOs, Champions Online is definitely more fun when played with other people. Certainly the best times here were had when all three characters were together. The interface could do with being cleared up a bit and a lot of the core concepts could really do with being explained better, plus you're essentially playing City of

Heroes over again. However, that's no bad thing. And it makes a change from clobbering goblins. One more mention of the character creator too, as it is surely the best one ever included in any MMO. In some ways, starting the game proper is a slight disappointment after using it."

STARCRAFT:

HERE COME THE BUGS...

STARURAFT OF LI WINGS

Jon Blyth gets infested by the Terran instalment of StarCraft II's single-player campaign

DEVELOPER Blizzard PUBLISHER Blizzard WEBSITE starcraft2.com ETA TBC 2010

HE LAST TIME I saw StarCraft II, in a vaguely professional capacity, was at the 2007 Blizzard Invitational event in South Korea. Surrounded by Tauren cosplay and young girls who were more interested in mouse-clicks per second than ponies, it was a jubilant atmosphere. Sure, people kept badgering Blizzard for a fourth race to extend the classic battle between the Terran colonists, the spiritual Protoss, and the hiveminded Zerg. And beyond the move to full 3D, there was nothing which you could point at, and shout "there's the big new feature, arrr" to your crew of rag-tag pirates. It was just StarCraft II – and only in Korea, where the nuances of StarCraft strategy are televised 24/7, would the reveal of a new unit draw screams from a crowd of teenagers.

Since then, we've learned a little more: it's to be delivered in three distinct packages, with Wings Of Liberty focusing on Jim Raynor's battle Dominion is establishing a classic propaganda-spewing dictatorship. It doesn't feel like episodic gaming, though (which was so 2007) - it feels that Blizzard are just using their expansions more openly and sensibly. Certainly, the pricing will reflect that - lead designer Dustin Browder has all-but confirmed

the second and third games will be priced as expansions. And from a storytelling point of view, it makes sense: covering all three sides of the story in one package limits what you can do with each one. Nine missions each, you've barely finished the tutorials before

THE LOWDOWN

- Elegant storytelling
- Varied single-player levels
- Newly found sense of fun
- It's still StarCraft
- S Is it different enough to grab lapels?

THE MISSIONS

The best way to talk about how StarCraft II's single-player campaign plays is to describe the missions - each one adds a different twist to the gameplay. Browder refers to it as mini-games and although it's odd to think of the StarCraft single-player campaign in terms of something like Plants vs Zombies, it's pretty apt. They've built a flexible war engine - so why not test it out?

MISSION 1 – TUTORIAL: TROOP MOVEMENT

Raynor's Raiders trek through a short, resourceless set of battles: destroying propaganda-spewing holograms of treacherous Dominion leader Mengsk, and eventually, with the help of the newly motivated grenade-throwing locals, obliterates the Dominion base. If you fail this mission, something's very wrong – but at least the tutorial aspect is hidden away on the optional F12 screen. If you've played any RTS game before, you'll be thrilled not to have to move the camera in all four directions to trigger a gruff, sarcastic response from a Sergeant.

MISSION 5 - ESCORT SERVICE

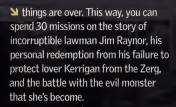

Meanwhile, Dr Swann wants you to evacuate 50 survivors. It's an escort mission, re-introducing the survivors. It's an escort mission, re-introducing the Firebat unit, and takes place over an area that's slowly succumbing to Zerg infestation. Man and build bunkers on the route, keep an SCV out in the field to harvest the Zerg chrysalises as they appear, and make sure the evacuation truck is surrounded by whatever units you've got available. The five escort runs you'll have to complete get progressively harder, and the Zera become more powerful and aggressive and the Zerg become more powerful and aggressive throughout. One of the achievements is to take the battle to the Zerg, and wipe out their bases – worth it if you fancy a challenge.

Tychus is all about Protoss relics. If he were a cartoon dog, he'd be sniffing around the cupboards, woofing "Relics?" There are five relics here, but you're up against two well-developed armies. It's a good job they're preoccupied fighting each other. Grab the relics before the Zerg gain an impossible-to-shake foothold. An entertaining introduction to the three-way conflict of StarCraft, and the powerful, slow Marauder units and their uniquely sexual grunts, this battle ends with a great climax, that involves you overpowering a Protoss Colossu:

MISSION 6 - RISE AND BURN

Tychus wants you to collect some minerals. The only problem is the minerals are in a chamber that's regularly flooded with lava, and there's an ambush-loving Zerg Hydralisk tucked away in one of the corners. However, you're given another new unit – the canyon-jumping Reaper. His movement comes at the cost of firepower so he's easily overwhelmed. But why fight, when you can lure the Zerg into lava? This is the one mission that felt like a chore: every unit you build delays you reaching your target, and the slow spread across the environment is subject to setbacks that feel insurmountable. It's the one mission you don't immediately want to play again, to

SEALED FATE

Speaking of which, if you're wondering about the impact you can have on the storyline, the answer is none - at least in the long-term. There'll be a couple of moments when you have to decide one path or another, but they won't affect the final outcome of the campaign, and

won't be referred to in later expansions. Blizzard are telling the story, not you, so drop that Fallout 3 attitude right now.

It's a different crowd who turn up at Blizzard's Irvine HQ in 2009 than in Korea. A Frenchman wearing a "i pwn noobs" T-shirt. The German devotee who runs starcraft.de. A Russian guy who starts a question with "We all know PC gaming is dying," and an indeterminate voice who seems to have taken the removal of LAN support as a personal attack on his mother. If just one screaming Korean teenage girl had run through the room, it would have been a relief.

Eloquent motor mouth Browder spent 20 minutes guiding us around the game's interface. If you've watched the Battle Reports on the StarCraft website, you'll be familiar with his voice - upbeat, irresistible and gently exhausting. Rob Pardo is on his way, but as Blizzard's vice-president he's in charge of three huge in-development franchises, and another big secret project. We can probably forgive him being 10 minutes late.

When Pardo arrives, he has a chance to explain Blizzard's position on casual and hardcore gaming: "It depends on your definition of casual player. We can use it to refer to ourselves, as the everygamer, or we can use it for people who play PopCap games. If you're asking, are we going after moms who play Bejewelled, then no - that's not the people who play StarCraft."

Pardo defends his position as developing a game for the hardcore

first, then making it accessible as simply good game-making. The idea isn't to dumb the game down, but to let the player in. It's not two discrete and immiscible pools: the casual becomes hardcore. Fair enough as the dead eyes of the Bejewelled mom are startlingly similar to those in the cocked, drooling head of a child who's waiting for his 16th Satyr Horn to drop in Ashenvale.

He also has a chance to explain the late development of the single-player campaign - the StarCraft II team only started dealing with it halfway through the overall development cycle: "From an organisational point of view, it'd be great if we could start single and multiplayer development at the same time, but the reality is we have to figure out the units.

"The idea isn't to dumb the game down, but to let the player in: the casual becomes hardcore"

"We want to get the multiplayer up and running - then we start figuring out the units, what's fun. How can you start designing a single-player campaign before you know what the units are? Start too early, and we'll end up throwing out more missions than we already do."

Other choice snippets include the defence of their decision not to support LAN - "LAN will be a great footnote in the history of PC gaming, just like DOS"; the rejection of Steam and Games For Windows - LIVE! in favour of Battle.net - "Why would we use those, when we've always had the best system in the

world?"; and Blizzard's reaction to the age-old PC piracy problem - "Our strategy has been to create a place where the players want to go. Of course you can pirate World of Warcraft - it's just not much fun."

THE BATTLE BEGINS

After this lecture we we're escorted to the third floor, in lifts painted like the ante-chambers of hell, then sat at a monitor and allowed to explore Wings of Liberty's opening missions.

There are no hero units in StarCraft - you don't pilot Raynor around, dealing

UPFROKITHANDS-ON

≥ overpowered death. That's Warcraft deal. StarCraft is about expensive, expansive, and expendable armies. As Browder explains, you can have the lead characters on the map, but that means you have to design the mission around them - their death would be game over, and it wouldn't be in the spirit of StarCraft to have 15ft tall units. You might as well give them bobbleheads.

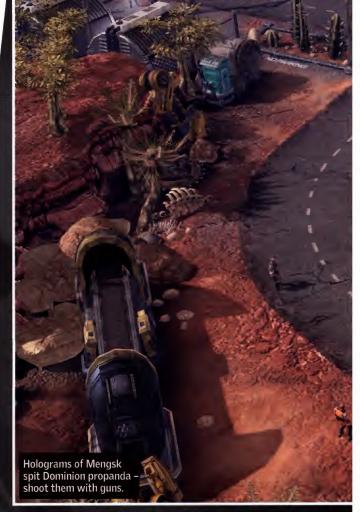

With quick and non-patronising tutorials (no tutorial element is forced on you), you're soon on board the Hyperion, where - once you've finished the first five missions - you gain access to the four main rooms and the game's main characters. You can visit the Cantina to watch TV - usually a report on your last mission, or the developing storyline - or buy mercenaries, which

"There are no hero units... StarCraft is about expensive, expansive, and expendable armies"

The 3D is almost resentful – you can rotate the camera a bit, but it'll snap back into place immediately. The implication is Blizzard are saying, "We made these maps to be viewed this way. We don't want you rotating the camera. But if we prove that you can, will you just shut up about it?" This also makes sense from a pro-sports angle – it would confuse the spectator if the terrains were constantly rotating.

are the game's equivalent to hero units. Mercs are powerful sets of elite units, but there's no incentive to keep these guys alive: you don't keep them, they don't level up, and there's plenty more where they came from.

You might prefer to spend that money with Flynn in the Armory. This is where you'll find less dramatic, but longer-term upgrades to your units. More efficient SCVs (Space Construction

TEMPLATE NERD GUY

KERRIGAN

By consuming Kerrigan to absorb her psionic created a poignant foe for Raynor. This means Wings of Liberty is a love story, but no more disturbing than any of Richard Curtis'.

JIM RAYNOR

Raynor has developed a love of liquor since Kerrigan fell to the Zerg. He's not a cliché drunk, but he's seen with a bottle enough to let you know that he's taken betrayal and failure badly.

GABRIEL TOSH

Arms dealer and "pseudo-Rastafarian" Tosh has been around a lot more than he lets and his missions have always led Raynor down a darker path.

RORY SWANN

Flynn is the snippy portal to the Armory. This is where you'll spend your earnings to upgrade units. Flynn done spirit mixed with a need for revenge.

TYCHUS FINDLAY

Raynor's friend from his shady past Findlay will suggest missions in which you're searching smokes cigars as well, which could mean he's a bit of a baddie.

POST-NATAL IMPRESSION

The worst named peripheral ever?

Blizzard vice-president Rob Pardo also comes out with something that everyone watching Microsoft's E3 conference must have thought. Project Natal is simply too inaccurate as a controller for a real-time strategy game. Pardo concedes it might be the first step towards a Minority Report-style world of gaming/mime, but Blizzard aren't making strategy gimmicks like the voicecontrol of EndWar. They're making a game where Koreans need to make many mouse clicks a second to maintain their edge - if you introduced something as ambiguous and vague as a Wii Remote, you'd be pushing a country to self-mutilation and riot.

Rob Pardo Vice-president, Blizzard

Vehicles) or the option to grant them the ability to repair vehicles. Browder's keen to point out that these benefits are only available in the single-player campaign it'd be impossibly unbalancing in a multiplayer game. But when you're playing against AIs, that's less important. During skirmishes on the ultra-hard level, the AI is open about cheating, as it accrues resources quicker than yourself, so it's only fair you get a few perks.

polish off some Protoss.

The lab, meanwhile, is where you can trade the optional items you accrue from missions for upgrades. Zerg chrysalises can be harvested with SCVs in some missions, and smaller Protoss relics can be found on others. Browder looks at the screen with a comical contempt: "This will change - we'll think of more interesting benefits than a +1 attack."

CAMPAIGN VARIETY

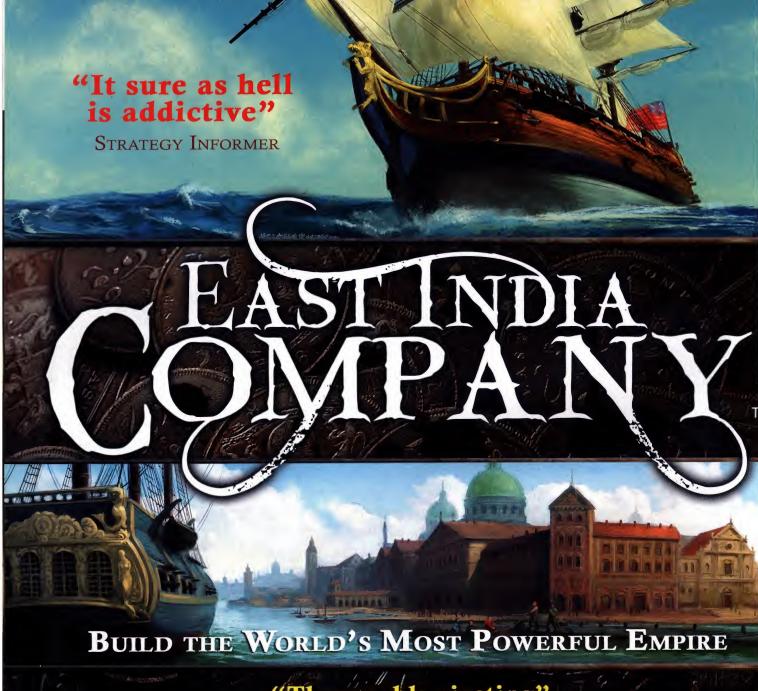

The most interesting thing about this approach is that it forces the next two games to be completely different in presentation - the strong Terran

cowboy aesthetic wouldn't make much sense in Protoss or Zerg campaigns. Browder wouldn't expand on rumours that the Zerg campaign would have a role-playing, levelling-up feel, but it's one of the things they're considering.

It must be stifling to create a new game from one that's considered a masterpiece of balance. To take 10 years of refinement, patches, and perfecting and throw new units into it. But if you've watched those Battle Reports, you'll see that Wings is still

StarCraft. The back and forth of battle is intact; the individual victories in a losing war are just as hopeful; and the raw visual, uncluttered appeal that makes it such a bizarrely watchable sport is completely intact.

I've never really considered myself a sports fan. I've always been silently outraged that people can be idolised because they can enter a thoughtless state of instinctive physical brilliance. But watching those Battle Reports I can see why Koreans watch this stuff.

HATS OFF!

ERHAPS THE ONLY rubbish thing about the real world is that people who can spend lots of money can have better things. Formula One's a good example: teams like Force India can't afford good bits of cars and have to use mixing bowls for helmets.

MMOs used to be a comforting socialist retreat though. Everybody begins at level one with equal potential for growth and infinite scope for the decay of real-world relationships. Champions Online on the other hand will feature premium items, bought on top of your normal subscription that'll give you an in-game advantage – as long as you're ready to hand over real cash for them.

It's not nearly the first MMO to do this, but it's probably the most recently disappointing case of cashgrabbing at the expense of the player's experience.

Or something. I'm just angry that I might not have the coolest top hat in the game any more.

BLOOD BOV

Adam Glick sees a red bowl and he tries to paint it black

DEVELOPER Cyanide Studios **PUBLISHER** THQ WEBSITE bloodbowl-game.com ETA Out now (online). 18 Sept (in stores) PRICE £39.99 (online)

O PUT IT in laymen's terms, **Blood Bowl** is American Football meets a bar brawl - players have to get the ball into their end zone (their end of the field) while avoiding getting blocked, injured or killed.

But playing Blood Bowl isn't as fluid and intuitive as that. While it may have the same goal as classical sports games (get the ball in the right place) it runs like Risk or Baldur's Gate, depending on your play style. Despite how this sounds,

initial kickoff has the ball landing in someone else's half, and any player can pick up the ball and throw it. However, the success of every action - dodging, picking up and throwing - is based on the result of dice rolls, and so you have to be careful how you allocate players. You'll want to use your beefier players to block the other team (as in start a fight with them) and clear a path for the player with the ball to run into their end zone, or pass it in.

"Despite how this sounds, Blood **Bowl** can be a lot of fun"

Blood Bowl can be a lot of fun. It's just sometimes it requires you to excavate a deep mine to find it.

The rules are simple. Each team is made up of 16 players, each with their own strengths and weaknesses. The

If you're on the defensive, the same applies – except you're trying to hit the player and take the ball from him, or get a player in the line of his throw so you can intercept. It gets even more confusing when you consider players can

get knocked over, injured and killed; be sent off for hitting a man when he's down; and even cast spells.

FOOTBALL IS WAR

Depending on the mode you choose, these rules are either invisible or painfully obvious. The real-time mode - much like Dawn of War II - allows you to control one player at a time, with the AI helping you across the field. You can pause too like in Baldur's Gate - and issue a series of commands, such as sending three linemen forward to create a hole that your player with the ball can run through.

If you think this seems a bit intimidating, you're correct. But the game is immensely satisfying when you get things right. Depending on the team you pick - for example, the Chaos are very physical and run a lot, while the Wood Elves like to weave, throw and catch – the whole game can be different. I preferred the Orcs'

ETHICS AND THE INTERNET

The hell we went through to review this game

Blood Bowl is one of the hardest games that we've ever had to source.

In order to get a copy of the game in time for this issue, we had to buy one online. However, a couple of minutes after giving our credit card details to the Blood Bowl's online store, our bank called to say there'd been suspicious activity on the card's account.

In the end it took us three different credit cards - and three calls from banks, checking the payments were legit - before we were taken to a page that said the payment was being taken by a Dutch company called Triple Deal, but we weren't given an order number. Half an hour later, the game's activation code appeared in our inbox, and we breathed a sigh of relief.

Then we found out installing the game involves downloading four files and putting them in the same folder.

Why couldn't they have used Steam?

game – lots of careful blocking and creating holes, knowing that my team was better at creating a hole than finding one through the air.

However, this becomes rather more difficult in the turn-based game. It takes a radical re-imagining of what you think the game will play like to even wrap your head around it - such are the slings and arrows of being faithful to the source.

an endless Franchise campaign where you create your own team, level it and lead it to stardom.

Players all individually level and can be built in your own image - to the point that I'd advise not touching it until you're comfortable with your play style. Each player levels depending on what they do in a match - such as passing, blocking or scoring - forcing you to keep an eye on

"For all the positives there are deepseated problems with Blood Bowl"

Turnovers are frequent, and a seemingly innocuous move can completely ruin your game plan. Blood Bowl isn't illogical, stupid, or unfair - it's just bloody hard to get to grips with. Even when you do, little mistakes will punish you painfully, especially when you play online veterans.

Strangely enough, there is some real depth when you delve into the game's campaign setting. Usually the last thought in a sports game, the singleplayer mode in Blood Bowl is engrossing:

what everybody's doing. Each time they level, they can pick a skill, such as Sure Hands that gives them an extra dice roll if they fail to pick up the ball.

Even the campaign itself is interesting: tournaments can be gambled on, players can be bribed to be less effective, and your own players can be trained and injured in the process. You can organise sponsors for your team, promising particular goals (such as a certain percentage of victories) in return for fat bonuses. The depth is something to be appreciated - though it could have done with a lot more explaining, and preferably by someone who's fluent in English.

For all the positives, however, there are a few deep-seated problems that limit Blood Bowl. The first is the distinct budget feel of the game. Sounds are repetitive - especially the unfunny and

monotonous commentary - and the menus are written with all the flair of a bad Half-Life 2 mod. Worse still are the little things: loading screens, tutorials, tool-tips etc are riddled with grammatical errors and confusing language.

A TOUGH GAME

The basic animations lack the complexity expected from a Warhammer game. There are only a few stadiums, which becomes painfully apparent a few hours into the campaign. There aren't really that many player models. And if you score more than two touchdowns in a match, you've seen all the animations for your team. While the core of the game is sound, the overall package lacks the finesse that one demands from such an awesome license

The final, and more personal problem, is that the real-time mode is not what the game needed. If it required another year or two to develop it, so be it - but a truly real-time Blood Bowl would be akin to the console game Blitz: The League.

That said, Blood Bowl isn't awful – in fact, there's a lot to like if you're willing to

dedicate your time to learning its complexities. If you're a fan of the board game, you'll like this adaptation - but if you're not, it's not going to sit well with any logical imagining that you've ever had for a *Blood Bowl* game.

HILE AT FIRST glance it's a bizarre concept, an alien mothership beaming up Fallout 3's Wanderer actually sits well into the sequel's, and its predecessors', stories (remember the crashed flying saucer in Fallout? How about the TARDIS? Or the crashed Star Trek shuttle in Fallout 2?). Little green well, green-ish - men running around in flying saucers wielding rayguns fit in well, juxtaposed with the wasteland's nuclear Cadillacs, day-glow cafés and grinning Pip-Boy caricatures.

That's the strongest feeling you'll find from Mothership Zeta - constant, pleasant surprises from what could have been a dull-as-ditchwater mess. When you find a crashed spaceship in the middle of the wastes, you're taken into the mothership via a spooky, wavy teleporter, and find yourself on a table being probed by bald-headed extraterrestrials.

It's not long before you trick the jabbering midget creatures into releasing you from your cell and, with the help of a little girl called Sally and your newfound friend Somah, make your escape. It's a really bizarre tale that takes an

interesting stab into the history of Fallout - let's just say the aliens were around long before the Great War. The combat is claustrophobic, somewhere between Lost In Space and Dead Space, and the new weapons are remarkable both for their power and '50s B-movie sound effects.

The icing on the cake is the constant introduction of recordings by the aliens of their former captives. These can be played (much like other notes/radio signals) as you do other things, and help round out the history of some of the captives you discover. You even get a chance to walk out into space - and the conclusion, for the first time in a Fallout 3 expansion, is truly satisfying.

GET PROBED

That said, it's probably somewhere in the middle as far as length goes, lacking the depth of Point Lookout (though it's a damn sight more interesting) and a real connection to the world of Fallout 3. While this can be explained by saying that Bethesda didn't want to damage the mise en scène, it would be good to see the aliens having a reason to return.

It also errs on the side, as has been the case for most of the expansions, of pure combat.

NE MIGHT SAY that the ending of Fallout 3 was a bit of a non-ending. It didn't make too much sense and - without spoiling anything - had one gigantic, lumbering, nucleated plot hole. This is why it's welcome that Broken Steel demands that you've reached the point just before that said ending, so that it can conveniently re-write it at the last second and provide a slightly more sensible one.

Broken Steel is probably the most substantial Fallout 3 DLC yet, feeling like a cohesive part of both the Fallout lore and the main plotline of the game rather than an afterthought. The Wanderer can continue to explore Washington State, reach Level 30, and can gain several new, if not mind-bendingly awesome, perks. The advancement of the storyline is substantial and a great big step in the right direction.

Broken Steel's storyline, as is the case with all of the DLC so far, is a bit damp. While literally explosive at first, it comes to a somewhat abrupt end, and the world itself remains unchanged. After what is apparently a significant act - which we won't spoil - you're left with a remarkably untouched wasteland. Considering the magnitude of what happens at the end of Fallout 3, during the weeks before Broken Steel takes place and its eventual conclusion, you're left with a big gun and nothing much else.

Ultimately, Broken Steel is satisfying. It's consistently engrossing, explosive and impressive to the eye, and while its conclusion bares a remarkable similarity to the events in Raven Rock, we can forgive Bethesda. It's no Shivering Isles, and it still lacks the depth that we want from Fallout DLC, but it's very much worth your time and money.

HERE'S SO MUCH to play with in the Fallout canon that one can't help but despair when Bethesda chooses such a weird locale as Point Lookout, Maryland to house its DLC in. After taking a tugboat to an area apparently not affected as badly by the nukes as the rest of the world, you're greeted with a drab theme park, a large field, and a mansion containing a ghoul that has a supposedly British accent.

This is very much Point Lookout - an incongruous addition to Fallout 3 that has little or no bearing on the wider world itself. You'll fight with tribesmen who have suffered trepanation, get involved in a war between scientists, go on a vision quest, and ultimately end up with yet another totally unsatisfying conclusion - probably the worst yet from Fallout 3's DLC. The ending is so bizarre and unsatisfying that you may much like we did - walk around for 10 minutes before realising that it's over.

That's not to say that Point Lookout is bad - the main storyline is quirky and very Fallout, splicing together the stories of Old World America with the remains of the human race. The side quests are remarkably vast, too, and the bizarre irradiated denizens - three-tooth

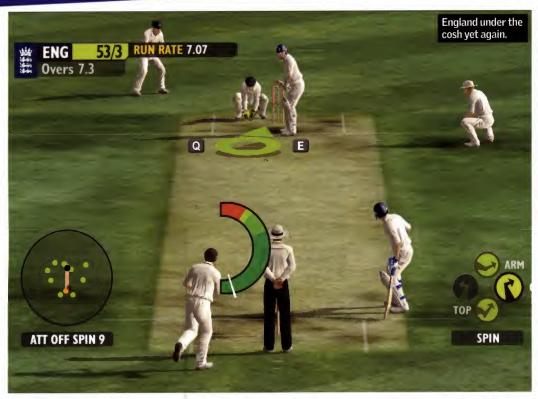

nuclear hicks – and the area rewards those who invest their time in working through the five additional side quests. However, the main quest feels lifeless and forces players (no matter what their choices are) into the same ending in some irksomely contrived ways.

Whether you love or hate Point Lookqut is dependant on your play style. If you want to be the explorer and experience the finesses of the world, then this is for you. However, if you're looking for a detailed, dramatic storyline to follow, you're not going to be pleased.

ASHES CRICKET 2009

David Brown steps in for Freddie Flintoff. With predictable results

Officially licensed cricket fun cashing in on/celebrating the recent Ashes tour with commentators galore.

MINIMUM SYSTEM REQUIREMENTS: 2GHz processor, 1GB RAM, and a 256MB graphics card with Shader Model 3.0 support.

HOW IT STACKS ASHES CRICKET 74% CRICKET 07 68% 63%

HE ASHES WILL have concluded by the time you read these words, so I'll guess you're either swilling down the champagne in various toasts to England's improbable victory in the fifth Test, or you're drowning your sorrows as Australia once again provoked a stunning middle order collapse from England's batsmen, and carried off the tiny urn back to the Antipodes for a few more years. If you just don't care about cricket, why are you even reading this? Go on, piss off out of it.

Now that's taken care of, the remaining lovers of willow and leather can ruminate on the following words. The next game in the much-loved Brian Lara series, Ashes Cricket 2009 is both an attempt to revive a forgotten brand and also a shameless effort to cash in on the hype surrounding the famous series.

I can safely say that Ashes 2009 is the best cricket game money can buy, but I could equally say that there are a number of issues that still remain from the previous game (Brian Lara International Cricket 2007).

GOOGLIES GALORE

Some things have definitely been tidied up and it's now a more accessible game than before. Tutorials are provided by Sir Ian Botham and Shane Warne through the Legends training mode, where you go through a series of challenges from basic batting and bowling to advanced techniques and strategies. By the time you get about halfway through these, you'll be itching to just get on with a proper game.

When its time to get started you'll find the usual raft of limited overs matches and full-on five-day Tests are available, as well as the Ashes itself. Graphics and presentation veer between good and drab, with the crowd looking rather sloppy, which is a shame.

The gameplay is an improvement, with a more realistic feel to the batting, bowling and fielding. However, the AI still has a tendency to run itself out stupidly far too often and the continued lack of proper edges behind the wicket

mean having a large number of slips is often completely pointless. We can appreciate it would be difficult to get thin edges simulated accurately, but without them, well, the game just isn't cricket. Nevertheless, Ashes Cricket 2009 is a decent game of cricket, marred by some classic issues. If you'd sorted out the persistent problem with the edges and runouts, you'd have got a much higher score, Codies.

OUBTERS BEWARE! EAST India Company is not Empire: Total War, but a 150 year-long economic epic beginning in 1600. The agenda of colonisation was to bleed India and Africa dry, and, being the 17th century, the only way to do this was by sea. Success requires grasping simple economics - fill your ships to the brim and sail between the East

and West, trading as you go. That's not to say it's a walk in the park. The game dynamically alters the prices of imports and exports, so keeping a careful eye on the world's first globalised economy is vital. Anyone can make money, so it's about maximising your profits. Automatic trade routes, upgradeable ships and a shrewd business sense will help you fill your coffers to near-bursting.

Alas, historical accuracy denotes your transnational company is not alone. Occasionally rival nations will get greedy and decide to throw some cannon balls your way, propelling you into the game's naval warfare. Playing

out like every other ocean-combat game, you can target the hull, sails or crew or opt in for a more personal approach by boarding the enemy's ships. The game's engine lovingly recreates the time period as the ships blow each other to smithereens. The only downside is the ship-on-port combat that's limited to a text screen and number crunching.

East India Company manages to whisk you on a sedate journey through teatime. As your ships chug away and your balance gets fatter and fatter, I can't help but feel the urge to walk into Tesco and demand to pay for some coffee with some bits of wool.

THER THAN A few new minigames involving hitting wooden pirate ships with tennis balls or potting pool balls with, well, tennis balls again, I can't honestly say that much has changed since I played the very first Virtua Tennis game many years ago. Despite claims of 'revamped' World Tour modes and various things like that. Virtua Tennis 2009's game model hasn't

changed since then - it's still the epitome of arcade action and lacks any depth.

It's still almost impossible to hit the ball out in open play, meaning matches with two players of decent ability could go on for hours, with rallies only ending when one guy falls asleep and fails to press fire. So that's oversimplifying things somewhat, but doubles matches certainly feel like this. When you've only really got three shots - top spin, slice and lob the lack of variety does create carbon-copy rallies that occurr over and over again.

The World Tour mode is excruciatingly dull too, with each tournament inching your ranking up by a couple of measly points. Yes, this

means that if you get all the way to number one in the rankings, you've certainly earned it, in terms of time invested, but only the most determined or hardened fans will make it this far. Boredom is sure to set in far too quickly.

The AI is also either unbelievably rubbish (not moving to hit the ball until it's gone past) or stubbornly perfect (making every rally last an extremely long time). On the harder difficulty settings, the lack of variety in the way you can approach the game really shows, removing the ability to win points with a touch of magic.

All in all, Virtua Tennis 2009 is a disappointing and flat experience that's only really any fun when played with a friend, who may make an occasional error. but no pink hair. **Adam Glick**

HE RISE OF episodic gaming has really benefited the adventure genre, with new Sam & Max and Monkey Island games using the format, as well as everyone's

favourite wrestler, Strong Bad. But for everyone craving something more British (or covered in cheese), Wallace and Gromit are here.

After defeating the moustachioed Mr Monty Muzzle in the last episode, our intrepid duo find themselves dealing with Wallace's accidental engagement to his less-thandesirable next-door neighbour. After a stealthy Gromit finds out Wallace's future bride has an aversion to esteemed country club Prickly Thicket, a plan is set in motion. Unsurprisingly, Wallace soon finds himself a new member of said club, and is soon set with the task of saving it from destruction.

The game, as is par for the course (fnar fnar), is funny, but in a brief

chuckle-and-smile kind of way, rather than the laugh-out-loud way of Monkey Island. That said, the song about golf that plays during Wallace's initiation to the club is simply priceless. The puzzles all fall under the banner of medium

> difficulty, not signposted by any means, but nothing to tax point-and-click vets. The voice acting is pretty good, although the lack of Peter Sallis as Wallace is a shame. The dude is getting on a bit though, so I won't begrudge him a rest.

This is a sedate game that won't appeal to everyone, but for a relaxing afternoon, whip out some cheese and crackers, settle down, and enjoy some time in the company of the most

HEARTS OF IRON III Only for the hardest of the hardcore

MINIMUM SYSTEM REQUIREMENTS

Intel Pentium 4 2.4GHz or AMD 3500+ Quad Core, 2GB RAM, and a GeForce 8800 or Radeon X1900.

HIS IS A fantastic example of a game meant for fans of the genre. Hearts of Iron III is a grand strategy war game, a real-time strategy of epic scale and scope. The game takes place between the years of 1936 and 1948, letting you pick any country that existed at the time, and guiding it through the years of the war.

Players control all aspects of running their country, from developing their military power to politics, diplomacy, espionage, scientific research, and trading. Should the player come to arms with another country – which is likely given the time period - they also control their armed forces on a large scale, choosing which provinces to attack or defend, and with what forces.

The problem with this game is that it's simply too complicated for all but the most die-hard strategy fan. Tutorials are present, but strangely only cover about half of the game, with some important things, such as combat, apparently omitted altogether. Even when they do explain things, the

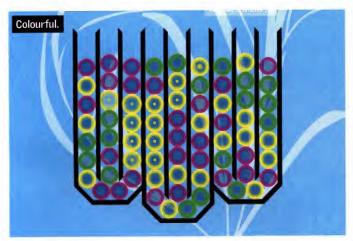

tutorials consist of walls of text that can be a lot to take in. Players can, however. set the AI to control certain aspects of the game, freeing themselves up to focus on other parts. This can help a new player to gradually learn the game, but a first-timer will find this overload of detailed information staggering

Hardcore strategy fans and history buffs will love Hearts of Iron III. For everyone else the game is nearly inaccessible, with a learning curve that brings new meaning to the word steep. That said, it's not a bad game, and if you're one of the aforementioned strategy fans, you will likely enjoy it. Sam Smith

games in the world, and it takes something special for a title to stand out amongst its peers. Unfortunately, 'special' is not a word that describes *Chains*.

The game revolves around making chains of at least three bubbles, which must be of the same colour in order to link up. Also, the bubbles aren't static, bumping and rolling off one another as they fill up the screen.

Rather than following the traditional puzzle game convention of having one mode that gets harder, *Chains* has 20 levels, each a different scenario using its core mechanic. For instance, one stage may have you making chains to remove bubbles before they pile too high and hit spikes at the top of the screen, whereas another has you creating a 40-bubble chain.

The problem is most of these levels are over too quickly and a skilled player could finish the game in little over an hour. The game is also bland to

look at, with none of the visual flare present in genre stalwarts such as

Lumines. The soundtrack is serviceable, but entirely forgettable, with nothing to distinguish it from many other games.

Compared to superior timewasters like *Peggle* or *Puzzle Quest*, this game has little to recommend it. At £3.49, it's hardly bank-breaking and if you have an hour or two to kill, there are worse ways. Still, *Chains* is never anything more than average at best, and feels destined to be forgotten.

HIS IS A game with an interesting concept. Think of a cross between *Mad Max* and a George Romero film, and you have something far better than *Clutch*.

Essentially it's an open-world street-racing title, with one relatively unique selling point: zombies. Apparently, the best way to deal with a ruined city full of the walking dead is to deck out a car with spikes and blades and then drive fast. There is some kind of story, but it is unlikely you will care, or be able to understand it if you do. Developed in Russia, *Clutch* has some of the most hilariously bad translation yet seen in games and as the story is told entirely through text at the start and end of missions, following it is difficult.

Players are treated to a number of different modes, including racing, item collecting, helping someone else collect items, and more racing. Unfortunately, it doesn't take long for the game to get boring as the driving is very basic, with nothing to set it apart from other racing games. The graphics are awful and the city the game is set in is tiny. The killing

stroke is that the soundtrack consists of five terrible songs, played over and over – it's not uncommon to have the same track play a few times in a row.

Side missions can also be played to amass funds with which you can upgrade your car. This is not only extremely dull but also pointless, as the upgrades you buy are barely noticeable when it comes to performance.

Yet this game does have one redeeming feature. Zombies are everywhere, and mowing them down in a variety of gruesome ways is nearly always amusing. But that gets old, and for £20 *Clutch* isn't worth the money. **Sam Smith**

E SPOKE ABOUT Under a Killing Moon in our last issue (issue 211) and about how Good Old Games had only released the first three Tex Murphy games. Well, now they've let the final two loose as well.

Currently the final Tex Murphy adventure (though rumours persist about

one final fling) Overseer was a remake of Mean Streets, the first game in the series. It was, however, certainly the best looking of all the games, with a new "built for Windows 98" engine showing off Tex and his troubled buddies in all their glory. The transition wasn't to go entirely smooth, with a control method that wasn't adored by all. Nevertheless, it didn't stop the series' humour, wit and intelligence coming through.

That games based on detectives or crime solving (the CSI franchise not withstanding) aren't popular these days is a shame. I suppose if they were to come out, they'd have to be shooters or arse platform games just to make the

dollar signs light up in the eyes of marketing men. Well, you can spit in their faces and go buy all of the Tex games on GOG right now. I heartily endorse these

Like other adventure games of its time, wit, humour and quality writing that's missing from most modern adventures is present, making listening to the dialogue a treat. LEGO INDIANA JONES:THE ORIGINAL ADVENTURES

PUBLISHER Steam WEBSITE store.steampowered.com PRICE £12.99

IN MY OPINION George Lucas' films are a load of old shit (yes, that includes Star Wars) but I do find the Indiana Jones films to be rather good. This means that I didn't immediately spit on the screen when I started to load up LEGO Indy. Knowing that it was an excellent block-'em-up helped hugely.

The stylised nature of the graphics means that, despite more than a year or so having passed since it first landed among us, nothing has really changed. So the gameplay is the only thing you can really look at in drawing budgetary conclusions.

On our initial play LEGO Indy did throw up some frustrating issues, so to then go back and see them again especially some of those bastard camera angles that make progress overly hard -

terms of platforming fun, even if the South American temple from Raiders of the Lost Ark is hideously re-imagined.

WHEN IT FIRST came out, Supreme Ruler 2020 was a total bastard of a game. It was ruthlessly in-depth and could be described using the following words and phrases: complex, unforgiving, intimidating, and at times unhelpful.

Yet there was a kernel there, a chunky nougat centre of strategy goodness that defied the tough-as-diamond exterior, coupled of course with the unnervingly possible near-future political scenario that it put forward.

Painstaking and painful in equal measures, Supreme Ruler 2020 could really have done with allowing you (like in the more recent Hearts of Iron III, page 76) to dole out some responsibility to AI advisors, just to take some weight off your shoulders at the beginning.

THE LORD OF THE RINGS ONLINE PCZ Issue: 182 - 87% A near-perfect recreation of Tolkien's tales, with solid combat

and engaging plots, in a tasty MMO bundle. Meet Gandalf! Play as a hobbit or a spider Middle-earth awaits... WARHAMMER ONLINE: AGE OF RECKONING

PC7 Issue: 200 - 92% Mythic slips Warhammer into their realm vs realm template. Even the most reluctant PvPer will launch themselves into huge open warfare, and drop into temporary group quests.

GUILD WARS PCZ Issue: 156 - 94% How to make a gaming accessible to the masses. A lot of thought has been applied, and there are no subscription fees. Newbies can feel at home, thanks to a totally skills-based setup.

EVE ONLINE PCZ Issue: 130 - 88% Elite Online has been a long-held fantasy for old school gamers, and this space sim has come the closest yet to making it a reality. A slow pace belies the options on offer, from mining to trading to piracy.

SIMULATION

X3: REUNION PCZ Issue: 162 - 92% Finally, a space sim to better X2: The Threat, and it just happens to be the sequel. This is possibly the best-looking game ever to appear on a PC. Oh, and it plays pretty well to boot. Why not get reunited with the X Universe?

II - 2 STURMOVIK:

PCZ Issue: 128 - 92% While flight sims are getting rarer and rarer, at least the quality remains high. None are more impressive than this ultra-classy WWII combat sim.

THE SIMS 3 PCZ Issue: 209 - 92%

The Sims 3 is like having your very own reality TV show in your PC, and just as addictive. Near complete freedom of gameplay lets you be a vicious diety, a benevolent dictator, or instance are properly in the property of the state of the s just a creepy voyeur.

MICROSOFT FLIGHT SIMULATOR X PCZ Issue: 175 – 89%

The latest (and maybe final) in the Flight Simulator series is the biggest since Microsoft started using actual polygons. What's more, the visuals may just sear your eyeballs.

PCZ Issue: 188 - 80% A veritable compendium of all that is football, and a good sports game too, the recent FIFA still lags behind PES, but benefits from layers of EA spit and polish. A decent variant of the beautiful game.

ROLE-PLAYING

THE ELDER SCROLLS IV: OBLIVION PCZ Issue: 167 – 95%

Oblivion's sublime graphics, intuitive character-creation and massive freeform gameplay, put paid to the myth that you have to own a beard and live with your mum to enjoy RPGs.

PCZ Issue: 201 - 91% While it does play like Oblivion in a sci-fi skin, this is a great openworld that's just as entertaining if you just wander across
Washington state than if you
follow the plot. And DLCs are
adding to its greatness.

MASS EFFECT

PCZ Issue: 195 - 92% BioWare's best game since Knights of the Old Republic, with a real-time combat system that makes it feel a bit less RPG. Great story, fine action, brilliant dialogue and sex with aliens – it's a modern must.

THE WITCHER

PCZ Issue: 188 - 88% Adult and intelligent, the world of *The Witcher* is as fascinating as it is violent and corrupt. With an epic story that pushes you into moral dilemmas, this RPG came out of nowhere to revive an ailing genre.

DEUS EX

PCZ Issue: 93 - 94% This is the benchmark in RPGs -if not gaming. A twisting plot, exciting freeform levels and some moments of pure exhilaration and drama ensure

Deus Ex remains the alpha male of the PC gaming world.

WIRED WI-FI

ACK IN THE '80s, when I used to work in London, wear pointy shoes and carrying a mobile the size of your left speaker, the buildings I worked in used microwave links to form their networks. The problem with this tech is that it needs line-ofsight to maintain a connection, often over many miles, meaning everything from rain to pigeons can cut the link.

It's the same at home today with my Wi-Fi router. If my wife does the ironing in front of it, or the dog flops down and starts sniffing its arse near it, my network vanishes. Wi-Fi's radio signals don't need line-of-sight to work, but the only time mine works is when I've put everything in the same room.

In addition, I have to contend with four other Wi-Fi networks in the immediate vicinity. My FRITZ!Box router gives a graphical display of which channels are affected, and to cut a long story short, it's all of them. It was then I realised that I wasn't going to win.

Since I switched to HomePlug AV adapters and used a power cable network I've had no glitches or dropouts, and the throughput ishigher - enough to stream movies.

So I can heartily recommend you ditching your erratic wireless network too and replacing it with Billion BiPAC devices. You will live a lot longer, and your pets will be able to snuffle themselves in peace.

HIGH FIVE

Prepare to give the Core i5 some silicon skin

ISMAYED THAT YOUR fantasy Core i7 system has always been £200 more than you're prepared to pay? Your dreams could come true over the next few weeks as Intel introduce cheaper family members.

Core i5 is the minified, mainstream brother of Core i7 with a smaller feature set, so Intel are sticking it in a smaller socket and charging a smaller price. This means an i5 needs an LGA1156 motherboard, a new socket shared with the entry-level Core i3 range, as well as pared down Core i7 derivatives due early next year.

The X58 chipset found on today's LGA1366 i7 boards is Intel's flagship platform and, as many have found,

remains elusively more expensive than any other on the market. The new P55 chipset that Core i5 CPUs need will be much cheaper to produce, and it won't be long before we begin

seeing i5 boards available in good numbers for £99 or less.

ASUS are first to market with the P7P55D, a P55-based product likely to be bowled right down the middle of the cheapest and most expensive i7 designs, so expect a price tag of around £140.

The P7P55D centres around Intel's new P55 Express chipset and upcoming Core i5

The P7P55D sports an LGA1156 socket and, because i5 is a dual rather than triple-channel design, it has four rather than six slots for DDR3 RAM.

As well as all the expected mod cons, including eSATA, dual Gigabit LAN, 8-channel audio with DTS Surround, the new ASUS motherboard will also includes a curious return to legacy keyboard and mouse ports. uk.asus.com

EXTREMELY SOLID Corsair launches new SSDs

high performance solid-state hard drives retailing at £125, £180 and £300 respectively.

With maximum read speeds of 240MB per second, the Extreme Series units are a broad performance match for high-end rivals but at a more appealing price point.

Corsair claim that each drive has an expected life span of 100 years, together with upgradable firmware that means users can keep their investment fully compatible with SSD-specific Windows 7 features.

Be careful though. Until prices drop significantly, two smaller units striped together as your C: drive continues to makes the most sense.

COMPATIBILITY

I'm planning to get a second PC, and I'm wondering if you'd recommend waiting for Windows 7 before I buy the new machine, missing out *Vista* altogether?

The only fly in the ointment, I'm assuming, is that I won't be able to run current games (eg Crysis) on the new OS. Or am I wrong and Microsoft are going to be terribly clever and kind and include backward compatibility features which will let me play them?

Mike Diesch

(intel)

Over the last few months, the Windows 7 backwards compatibility issue has become a baked spud in Microsoft's lap, but most games and applications will work OK. The Windows development team would have to be seven kinds of crazy to create a new version that didn't run the stuff you use now. However, it's come to light

that XP Mode - the "Windows inside Windows" feature Microsoft hope will ease the migration of users with mission critical programs requires a processor with virtualisation technology.

Almost all AMD chips have this, but it's absent from a random number of Intel CPUs. For example, the Core 2 Duo E6600 in my workstation has VT but

the Core 2 Quad Q8300 in my benchmark rig does not.

Intel have said they'll add VT to the Q8300, E7500, E7400, E5400 and E5300 by the time you read this, but a large number of current Core 2 owners will find XP Mode out of reach.

Thankfully Intel have released a little program – the Processor Information

Utility - which can tell you if your CPU is capable of running Window 7's XP Mode. You can download the program

at snipurl.com/intelpiu.

PATH TO SEVEN

I've seen a number of companies advertising an 'upgrade path' to Windows 7 for people who buy PCs before the new OS has been released.

Is this a legitimate offer that Microsoft will honour? What does it cost and how does it actually work in terms of installing the upgrade?

Andy Strong

Take a look at snipurl. com/7upgrade. This leads to a page on Microsoft's UK website explaining how, if you buy your new rig from participating vendors between now and 31 January 2010, you can get Windows 7 for around £13, including shipping and handling fees.

The list of vendors involved in this promotion currently includes Acer, Gateway, Packard Bell, ASUS, Dell, HP, Samsung, Sony, Toshiba and Fujitsu, though as with any offer you'll need to read the small print: "The Windows 7 Upgrade Option Program in your region requires a clean installation of the Windows 7 upgrade media. A clean installation will result in your computer's hard drive being wiped clean of any software and data previously stored on the hard drive prior to the installation of the upgrade media."

"Do you want a high-end netbook or low-end laptop? My advice is forget fashion and go with the latter"

If you really must buy a new machine today, it's good to know you can upgrade to 7 for next to nothing. However, the fact you'll need to install everything twice puts the mockers on it for me.

TEENY GAMING

I'm looking for a small laptop with a long battery life and bright screen to use for basic computing and playing old games. However, I've been warned that mini notebooks are no good for that, and since I'm not looking to spend more than a few hundred pounds I may be out of luck.

Will a mini notebook run the original Red Alert, Dungeon Keeper or Unreal Tournament? Titles such as The Sims or The Movies? At what point do you need to go from netbook to proper laptop?

Any general advice, or a nod in the direction of a good guide, would be enormously appreciated.

Paul Brunger

The games you've listed show that you understand your prospective netbook (subnotebook, mini notebook, call it what you want) isn't aoina to deliver the performance necessary to run a recent blockbuster.

As a rule of thumb, if the game in question was released on or before 2000, you should be able to play it on a Windows-based netbook smoothly. I've every confidence that your wish list will perform more than acceptably though I'm not so sure about The Movies, a title barely three years old. No harm in trying though!

My last snippet of advice would be to make sure you choose a netbook with Intel GMA onboard graphics (Dells, Samsungs, Toshibas, most ASUS products), as you can then download GMA Booster from gmabooster.com - though as with overclocking this will have a detrimental effect on your battery life. Read on to discover my favourite.

MINI SUB

I'm in the market for a netbook, and the overwhelming amount of new models and confusing names is getting to me. If you can point me in the right direction I'd be really grateful.

What I need is a netbook under £400 that packs some kind of punch in terms of processing ability. I've been trying to weigh up the Eee PC 1000HE and the Samsung N110. The 1008HA looks lovely too.

I'm going to need this for school in September. It needs to have a fairly decent battery life - 6+ hours - and in terms of power I'd like to be able to use basic applications like Word but also an IDE such as Dev-Pascal.

Maybe I'm being too unrealistic here. Should I wait until the NVIDIA IONbased netbooks are released? I don't

care about screen size. screen type, amount of extras like Wi-Fi and USB ports or even thickness or weight, or even the hard drive.

Oscar Daws

The netbook market is confusing and also a bit weird. Take the trailblazing ASUS Eee PC. Noted for its diminutive size and low price, the

Dungeon Keeper's

Not a problem.

ALL ABOUT...

Not long ago you needed different cables to connect your scanner, printer, mobile phone or PDA. camera, keyboard and mouse to your PC. Today connections are made over USB. All you do is push in the cable and wait for the 'be-dink' sound.

more USB connectors than anything else. When you push in your connector, the host controller on your PC takes over so there's no chance of a roque USB device talking without your machine initiating the conversation. The device is asked to identify itself, and after a little chat is supplied

One of the great things about USB is that as well as being a truly universal means of bringing stuff together, it provides power to the device you're connecting. There's enough - roughly 2W - to drive external storage devices such as hard drives and optical drives without the need for an external 240V adapter.

USB 2.0 can send data in packet form at a rate of up to 480 megabits/sec. However USB 3.0 - due for release over the next few months - works at an astonishing 5.0 gigabits/sec.

range has been expanded to include a

9in screen, 10in screen, and most recently an 11in screen on the 1101HA that has a price tag larger than Toshiba's Satellite Pro L300D-21U with 160GB HDD, 2GB RAM, 15.4in screen, DVD rewriter, Radeon 3100 and Vista Home Premium.

So do you want a high-end netbook or low-end laptop? My advice for you is to forget fashion and go with the latter.

There's also every chance you'll end up installing one of the free versions of Visual Studio, which is an horrific bloated whale of an application that'll surely bring any netbook to its knees -ION-based or otherwise.

If you feel you must get a netbook, look at a Samsung. The NC10 was the first netbook to make sense, and the N110 gives you the battery life you want in your budget. 🖼

(AdZ) I'm sure I saw somewhere that you can copy some files from the Windows folder and then use these in another Windows folder to carry over activation data? Is this possible? (Wandy) You need to run Safe Mode and copy over wpa.dbl and wpa.bak from Windows\System32. However, this won't work if the PC to which you copy these files has a different graphics card, SCSI card, motherboard, MAC address (ie another NIC), RAM, CPU, HDD or optical drive. It's actually more complicated than that, but in essence if you have the same motherboard, processor and RAM you should be OK. Otherwise you'll need to phone Microsoft. Having done this a dozen times I've yet to be refused.

MESH SLAYER ELEMENTAI

PRICE £1,099 MANUFACTURER Mesh WEBSITE meshcomputers.com

THE MAIN INTEREST point of the Slayer Elemental is that it uses a solidstate hard drive (SSD) as a boot drive, and a regular HDD for general storage.

While the SSD cuts down boot times - Vista was usable within 25 seconds of hitting the power switch -

SPECIFICATION

3.3.2GHz Phenom II X4 955 CPU **GRAPHICS** ATI Radeon HD4890 1GB RAM 4GB OCZ DDR3 STORAGE 30GB SSD, 750GB HDD 05 Vista Home Premium

30GB means there isn't much room for anything other than OS files, plus a couple of apps and games regularly

Other than the SSD, the Slayer is a standard, top-end AMD-based gaming PC. It's got the latest Phenom II x4 beating away under the nowubiquitous CoolIT Domino liquid cooler, 4GB DDR3 RAM and a HD 4890. But there's little difference in performance between this machine and the AT-FX Dragon (reviewed issue 210), which costs under £650.

That said, the AM3 CPU and DDR3 RAM give a better upgrade path and that 750GB HDD provides storage

that'll last. It's also worth mentioning that Mesh is offering free upgrades to Windows 7 on its machines

The Slayer is very well put together too. The Elemental S chassis is stylish and the insides have been neatly tidied away.

The tough thing here though is the market. This month will see the arrival of Intel's P55-based motherboards and Core i5 CPUs, which could cut deep into the market for £1,000+ AMD systems. So, while this is a good machine now, you're best off waiting a few months before picking one up. DJ

CRYO NANO

PRICE £1,295 MANUFACTURER Cryo WEBSITE meshcomputers.com

INSIDE THE NANO'S compact cube case is a GeForce GTX275 graphics card, 6GB of RAM and 1TB of Raided storage. Cryo have done a decent job of getting some quality components into a relatively small case, and they've also made a stab at overclocking them a tad.

But overclocking's pointless without a decent cooler strapped to your CPU, and given Cryo's smaller form factor, this is especially crucial. Cryo have used a decent cooler to prevent the CPU's temperature getting to the point where the system throttles the processor. But the machine is more likely to have a shorter lifespan as a result.

SPECIFICATION

CPU Intel Core i7 920 **GRAPHICS** GeForce GTX275 RAM OCZ 6GB DDR3 STORAGE 2x 500GB HDDs 0\$ Windows Vista

Premium (64bit)

Cryo's case is likely to divide as much as it conquers. It's sleek, but in spite of being half the height of a normal case, it's twice as wide. And, weirdly, the DVD drive is located on the right side of the case, so you'll have to allow room for disc entry.

But Cryo deserve some kudos for making use of MSI's compact X58M motherboard. This board is the same Micro-ATX form factor as ASUS' Rampage II Gene, which is too small to be useful. But this MSI board is a perfectly capable model and is eminently upgradeable.

Overclocking issues aside, Cryo have made a good job of stuffing a lot of quality into an unconventional case. The size may be an issue, but the Nano suits sitting in front of a TV as a slightly large media centre. HW

ROCCAT APURI

PRICE £36.99 MANUFACTURER Roccat WEBSITE roccat.org

WHEN WE FIRST heard about the Apuri, we were puzzled as to how it achieved anything more than just using Sellotape or Blu-tac to fasten your mouse's cable to the desk. But when we took it out of its box and looked at it properly, we realised that it doubled as a four-port USB hub. This is the only

real reason to buy the Apuri, as the lead holder is just a gimmick.

Only of use if you need more USB ports or you don't want tape down your mouse's lead. DB

ROCCAT KONE

PRICE £60.99 MANUFACTURER Roccat WEBSITE roccat.org

OF THE TWO mice reviewed this month, the Kone has the most features and the most comprehensive set of options to fiddle about with.

Customisable buttons and macros are plentiful and different profiles can be assigned for specific games, while you can even change the lights if you so wish. A choice of weights can be

added or subtracted, although getting the lighter ones to stay in properly is problematic. Most

importantly, it just doesn't feel as good to use as the Saiph 3200. It's still a great mouse though. DB

ROCCAT KAVE

PRICE £79.99 MANUFACTURER Roccat WEBSITE roccat.org

ONE THING THAT can be said about the Kave is it's comfortable enough that it doesn't make your head hurt, so gains some definite plus points there.

When it comes to sound quality there could a bit more power to the bass, but, overall, it's good.

A handy volume control makes it easy to adjust things in-game and there's even a movie/game toggle to give you precise control over what type of sound is being blasted at your ears. DB

MIONIX SAIPH 3200

PRICE £54.99 MANUFACTURER Mionix **WEBSITE** mionix.net

FOR GAMING MICE, precision and handling are key, perhaps with a few configurable buttons for obscenely complex macro combinations tacked on.

With a 3200dpi sensor and buttons for altering its sensitivity in-game, the Saiph covers the first of the two core

needs of a gaming mouse. As for handling, other mice feel unwieldy in comparison to the Saiph. As for other bells and whistles, all the usual

fancy gubbins (eg. weights and a gold USB plug) are present. This really is a topnotch device. DB

Unless your PC is kept in an airtight clean room in which you enter through an airlock, wearing a full biohazard suit, dust will build up in it. If this happens do clear the crud out using a can of compressed air. Do not stick your Hoover into the machine's innards. That's just daft.

Take a top-of-the-range Creative X-Fi audio chip and surround it with components of such a high grade they're spoken of only in hushed tones by those in the know, and then add Dolby Digital Live - you'd have a pretty cool sound card, right? Actually, you'd end up with this one.

24WMGX3 PRICE £529 onec com

If we had the money we'd fritter it on this incredible 27in screen from NEC. Picture quality is simply unrivalled, and it's got so many input options it's the subject of at least three web fetish sites. Size queens will always go for something larger, and that would be lavishly decadent too.

If we're talking money no object, then we'd couple this with a solid-state drive from Samsung for maximum performance and storage, but if our loaded rig was limited to one hard disk, it would be this one. A huge 1.3TB of storage and a performance unmatched by any other vanilla HDD.

RAMPAGE II EXTREME PRICE £321 asus.com

This Core i7-friendly board sports the X58 Intel chipset and everything else you can imagine. It's the deluxe department store of motherboard design, hawking bespoke capacitor design and expertly tuned performance pathways, to the sleazy suburban joys of three-way SLI.

LOGITECH Z-5500 PRICE £195 logitech.co.uk

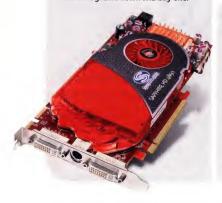

The price has dropped below £200 and these speakers are simply the best we've ever tested. The soundtracks from both games and movies ravish your ears, and you'll soon find yourself dusting off your old CDs just so you can sit in the middle of the sound and revel in it.

SAPPHIRE HD4850

PRICE £120

sapphiretech.com

This is the card that had arch-rival NVIDIA slashing prices in an effort to be competitive. Just £120 buys you a mainstream monster with performance that matches a GeForce 9800 GTX and snaps at the heels of the new N280GTX. Put the magazine down and buy one.

INTEL CORE 2 DUO E2180 PRICE £44 intel.com

At the budget end of things, it's a tough choice between the E2180, E4500 and E8200 processors from Intel. It's not suprising that things get faster the more you pay, but the E2180 here is a flexible engine that's great for gentle gaming or an overclocking frenzy.

VIEWSONIC VA903M PRICE £118 viewsoniceurope.com

The VA903m is a better bet than any of the similarly-priced widescreen variants as there are more pixels on its 19in screen: its 1280 x 1024 pixel panel offers greater depth than the standard 1440 x 900 panels of its peers, although it can't handle native widescreen resolutions.

ASROCK CONROEXFIRE-ESATA2 PRICE £60 asrock.com

Paired with an E6300, this ASRock motherboard can wring high-end performance from a budget rig. It features a 1066/800/533MHz FSB, SATA II with RAID, 7.1 HD audio onboard, CrossFire support, Gigabit LAN and ASRock's easy overclocking features.

CREATIVE LABS SOUND BLASTER **AUDIGY 2 VALUE** uk.europe.creative.com

The cheap Audigy card features EAX 4.0 and Dolby Digital EX support. This card makes an awful lot of sense for casual gamers, as there's little point throwing half a mortgage payment at your soundcard, unless you're an audiophile, or you want your PC to act as a top-class music system.

WESTERN DIGITAL CAVIAR **1600AAJS** PRICE £30 wdc.com

A 160GB hard drive, like this SATA 2 model, remains more than enough for the casual gamer to do a spot of casual gaming. A few good titles, Steam, a couple of thousand music files and the odd porn flick still leaves plenty of room for Windows to manoeuvre.

LOGITECH X-530 PRICE £55 logitech.co.uk

Logitech's X-530s have the edge on quality and are available just about everywhere. This Swiss-designed 70W, 5.1 surround sound system offers Logitech build quality with superb sound in games, movies and music. And their value can't be beat, giving sound quality above their price bracket.

LIFE SENTENCE

was on jury service a little while ago and I was told by people from various sides of the fence that it would be both boring and interesting. I would say, after having gone through it, that it is more erring on the side of interesting, but then that might be because I didn't get a case involving goat molestation or equities fraud.

It did get me thinking though – why are there not more games based on legal proceedings or just police investigation in general. If you look at how other media sources have approached these subjects, it's interesting to then note how reprehensible the gaming industry has been in doing so.

From the top of my head you've got Police Quest, that console lawyer one with the strange hair (Phoenix Wright, I believe - Ed) and some crappy Law & Order hidden object-y games. There's stuff like SWAT and such too, but they aren't really what I'm talking about. Yes, it involves police work, but not on the theoretical side. What also got me thinking was how few gumshoe detective games there, specifically after I had a look at the Tex Murphy games in this month's Budget reviews (page 78). Discworld Noir was likewise great, but we fans of police procedure just get stiffed otherwise.

Maybe the continuing rebirth of the adventure genre will help to propel these genres into the spotlight, but I suspect not. It does seem strange (and yes, I realise I haven't said anything about free games yet) that such a large part of our media culture is ignored by game makers.

SKINNED ALIVE

Get Photoshop ready, it's Street Fighter skinning time

WERSITE streetfighter com

n some ways it's utterly unsurprising that this has happened. Among the deluge of quality skins for *Street Fighter IV* now created by the modding crowd came the obligatory "Let's see what Chun-Li's privates would look like" nude skins.

Today there are a number of forums dedicated to the digital disrobing of all our favourite female game characters. If God existed/cared/was watching over us all (delete as religiously applicable) he would surely be weeping salty tears down his ethereal visage, perhaps those same tears falling to Earth and drowning the wicked with their briny bounty. But, the fact of the matter is, there are nudey skins out there and far be it from us to

doing his best Hollywood Hogan impression and El Fuerte being less annoying than before in a colourful *Spider-Man* costume. The possibilities are nigh-on limitless, given the variety of character models available to tweak. I might be overselling it a little, but there's no reason even more inventive ones couldn't continue to pour forth. Some characters, like E Honda, have barely been explored yet, given the natural inclination to go for the attractive females instead of the obese sumo guy.

The only real problem is how to get access to them. Installing skins isn't difficult. The trouble lies in viewing the skins in-game, because you'll need to have unlocked/be able to see more than just the default two colour schemes available for the specific character, unless the custom skin happens to be numbered 1 or 2. It's a shame, but I guess it'll keep you playing long enough to unlock Cammy's costumes. Don't tell me that's not what you were thinking, I know you better than that. After all, it's what I'm doing... oops, said too much.

LEFT 4 DEAD GETS MAPPED

Let David Brown find the infected wheat from the chaff

WEBSITE |4dmaps.com, |4dmods.com

HAT'S STRUCK ME after playing user-made Left 4 Dead maps is that creating a really bad one requires sod all effort. Especially the cheap Survival ones.

It isn't that the majority of maps are bad, it just takes more than rearranging the original textures a bit to impress us now. This is why Dead City (issue 211, snipurl.com/deadcity) isn't one of the greatest as, while it's huge and welldesigned, it doesn't go far from the original L4D.

Death Aboard (issue 211, snipurl. com/deathaboard) does that and is rightly hailed as being the best L4D map the community has to offer. Long maps, interesting new environments and an excellent finale all combine perfectly together. You can play a nigh-on flawless game of Versus too, with

a surprising number of servers ready to accommodate you. There is, however, a new challenger to Death Aboard's title.

SURVIVE THIS

Heaven Can Wait (snipurl.com/ heavencanwait) is being described as the hardest thing to have been thrown at veteran players since L4D's release. Made by a renowned mapper called Romka it's rock hard, full of imaginative locations and horde events - like when the vehicles drive past the motel and the Infected rush you because of the noise and offers up massive levels that'll test any player running the game on Expert.

This campaign doesn't have enough in the way of genuinely new locations though, so it might not have the edge on the excellent Death Aboard. But that's really down to the player's tastes.

"Death Aboard is hailed as being the best the community has to offer"

Then there are the Survival maps, which, because of the ease with which they can be created, form the bulk of the user content released so far. The quality does dip substantially, because there's far less effort required to make a tiny map with a small hut in it than there is to sculpt a five-act campaign, but there are still some gems.

Helm's Deep (snipurl.com/ helmsdeep) is based on Tolkien's Helm's Deep, and is perhaps the greatest Survival map of them all. This is despite it having an exploit that makes it almost impossible to lose. This map is being tweaked continually, so this flaw might be fixed once you read this.

Elsewhere we've got Central Dark (snipurl.com/centraldark), which is vast in Survival map terms: it offers an L4Dised version of New York's famous park, just with less dead bodies.

For the fan of simpler map design, there's Tower (snipurl.com/ld4tower), which is just a wooden ziggurat with

Wow! Floating zombies!

GOING DOWN... Valve takes a crash

Finally there's going to be a new (mini) campaign for Left 4 Dead from Valve.

Crash Course is going to attempt to bridge the gap between the end of No Mercy, where you're whisked off the top of Mercy Hospital in a chopper, and the beginning of Death Toll, where you're distinctly chopperless. It's only

going to be two maps long and Valve say it's going to focus on streamlining the Versus experience.

We somewhat underwhelmed by this offering, thanks to the great stuff we've seen coming from LD4's community.

Infected at the bottom and you at the top. Simple yet effective, just like Who's Laughing Now? (snipurl.com/ whoslaughingnow). Essentially, this is the cabin from Evil Dead into a Survival map. Excellent and fun, but absolutely bullock hard.

COMING SOON

As for the future, there are definitely a few custom maps that are standing out from the shuffling undead crowd.

Some are just unfinished campaigns showing great promise, some are Survival maps in a beta form. So, honourable shout-outs go to the likes of Wolfenstein (snipurl.com/ Id4wolfenstein), Detour Ahead (snipurl. com/detourahead), Resident Evil: Last Escape (snipurl.com/lastescape) and, last but not least, Yama (snipurl.com/ l4dyama), which takes Left 4 Dead to Japan, into daytime, and places we've never been before. Keep an eye on it, it could be big.

Freeware

Marco Fiori begs for free games in the street

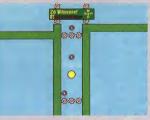

This month we go retro with a free re-release of one of the finest RPGs ever made; help a blob stop cutting itself on razors; get funky in a

disco-themed shooter; blast the scenery to pieces with a big laser; and see the love child of Mario and one of the founders of the FPS genre.

GLICK'S

INNOOUOUS 3

DEVELOPER Andrew McCluskey WEBSITE innoquous3.orgfree.com

I'VE MANAGED TO pop a vein. Don't blame me, blame Innoquous 3. Having never played the first two, and desperately trawling the web to find some sort of enjoyable freeware experience, I came across this gem. It may frustrate you to the point of nervous breakdown, but getting through this title's 30 levels provides a sense of satisfaction not experienced since I completed a vile Chinese Mario knock-off (search for it on Google if you dare).

You guide a yellow blob around levels that are continually playing with your sense of what's up and what's down. Avoid the razors (which cause instant death) and make your way to the end. It starts off simple, but McCluskey quickly ramps up the difficulty. I can see him, cackling away in his programming dungeon, as I fail a level for the 15th time. You'll need to jump with millimetre precision otherwise it's a restart.

Available as a download, or playable online as a Flash game, Innoquous 3 comes fully recommended. Unless you have a heart condition. Or perhaps an aversion to frustration of the most buttock-slappingly annoying kind.

THE ELDER **SCROLLS II:** DAGGERFALL

Head back to where it (almost) all began

DEVELOPER Bethesda Softworks **WEBSITE** elderscrolls.com

APPY 15TH BIRTHDAY Elder Scrolls! Before Bethesda were making post-apocalyptic RPGs, they were prancing about as elves with phallic greatswords. It seems they're keen not to forget their roots, which, to the delight of recession-clad gamers everywhere, has resulted in the release of the second Elder Scrolls game - Daggerfall - for free.

Comparing Daggerfall to the other indie games this month is a bit cheeky, because this was a game developed by a huge studio (well, they're huge now) and you can't avoid the fact that it's previously had a price tag. But it's free now. Let's repeat that over and over until it hits home.

There are plenty of options available to the 'classics' for reaching new

audiences, like Steam, Good Old Games, Impulse, etc. but Bethesda have rewarded us with one of the best RPGs out there For free

The Elder Scrolls formula hasn't changed over 13 years - you still create a character, pick their class and set off in search of treasure. It's difficult to present Daggerfall as anything unique, as it plays out like a history lesson rather than an actual game. Then again, did we happen to mention that it's free? Oh, we did, right, sorry.

Everything is instantly familiar, from the MIDI soundtrack to the old-school blocky graphics. You'll quickly forget about the high-definition era. Massive, open ended, engaging, engrossing take your pick. Multiple endings, a lifestealing amount of gameplay and

enough NPCs to run a country, Daggerfall's scope is unfathomable it really is a gigantic game. It's as engaging as it was on release and it's lovely to be able to revisit a classic.

You'll notice the issues that plague the game (unfinishable quests, texture issues, game breaking bugs) but overlook all that and you'll be compensated with one of the best RPGs of all time. It's not asking to be compared to today's greats, so if you refrain from doing so, you'll be well on your way to enjoying it.

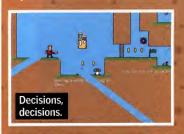

If you've never had the chance to play it then you've got no excuse now. And anyone who's visited Daggerfall before will instantaneously remember what made it so good in the first place. And it's free. And on this month's DVD.

G*E*N*E*R*I*C

Careful where you point that thing

IF YOU HATE tutorial messages, this game is for you. In fact, if there's anything in G*E*N*E*R*I*C that you loathe, you can shoot it with your pistol. Saying that, calling your gun a "pistol" is an understatement, as

it's akin to holding the Death Star's primary weapon.

Your task is to pick up as much treasure as possible and reach the flag at the end of the level. That's not to say *G*E*N*E*R*I*C*'s a clone of a famous Italian plumber – Mario never had this boomstick.

Ingeniously programmed in Flash (but not playable online) this isn't one for the trigger-happy. Shooting off a round will yield a destructive energy beam that wipes out anything in its path. Getting to the treasure often requires you to destroy your

surroundings, as the goodies lie beneath the earth or just out of your jump range. It's not just a case of mindlessly clearing a path: your beam isn't adjustable so *G*E*N*E*R*I*C* is less about platforming and more about

planning out a safe route. You see, if you catch the treasure with your beam, it becomes worthless. It's easily done and results in your quota being unfulfilled, preventing you from finishing the level. The same applies if you nick the finish flag - it becomes static, taunting you with its unobtainable presence. But never fear, your frustration is easily released by wiping the whole of the level clean with your beam of delight, including the scoreboard. Certainly, it's an interesting idea, but is it really just a waste of time? Perhaps, but it's a good waste of time while it lasts.

FROBOT Get up, get on up!

DEVELOPER Kyle Gray **WEBSITE** snipurl.com/frobot

IF JAMES BROWN was a robot, this would be his game. You control the afro-toting Frobot who's spreading his funky message in a mobsterinfested disco. In gameplay terms, that translates to killing stereotypical burly men in period suits who either want to hug you to death or pepper you with bullets.

Thankfully, following their demise, they promptly become an extra from Saturday Night Fever, frozen in their respective dance pose. Clear the level of enemies - while simultaneously avoiding shooting your funky companions - and you'll be treated to a miniature celebratory dance: lights, music and even cutesy animations. Simultaneously, the game's quaint charm (yes, funky discos are officially "quaint") makes it increasingly difficult for you to avoid the urge to join in with the dancing.

With your inner Travolta grooving away, you work your way through an infinite amount of levels. The enemy

density quickly increases and it's not long before you're back at level one.

Despite Frobot's lack of any real content, it's a welcome hark back to the golden age of gaming. It's what indie games are all about. Be sure to head on over to experimentalgameplay.com where Kyle Gray, Frobot's creator, has teamed up with World of Goo man, Kyle Gabler to showcase their new creations (hopefully one will be Planet of Slimy Funksters). Anyway, strut your stuff Frobot - I demand entertainment!

WEBGAME OF THE MONTH

ASH DOOM 2D

DEVELOPER Codinsoft WEBSITE silvergames.com/game/ flash-doom-2d

NOT TO BE mistaken with the equally impressive Flash Doom (the original ported to your browser), Flash Doom 2D is the perfect webgame for a lunch break. It takes everything cool about Doom - the guns, demons and textures - and squeeze it all into a platformer.

The only changes are that you play slightly differently, (eg avoiding an imp's fireballs by jumping over them rather than strafing).

Trivialities aside, this is the same game that catapulted the FPS genre into controversy and fame.

NEOTOKYO

Sadly, nothing to do with Akira

MOD FOR Half-Life 2 WEBSITE neotokyohg.com

OW I REMEMBER why I stopped playing Counter-Strike: it was causing me to suffer from severe, crippling fits of rage. It's easy to see similarities in NeoTokyo as one minute you'll be happily navigating a level and then, suddenly, you'll be dead.

There's no warning - your health just drops to zero. A few moments later, the reason behind your demise is made clear: your opponent de-cloaks and runs off down the corridor. A silent kill, followed by a hasty retreat. This mod doesn't reward you for running around, shooting randomly at anything moving.

Think tactically in NeoToyko, and you will, slowly and surely, begin to rack up some kills. Promotions come swiftly, and it's not long before you're creeping up on new players, and assassinating

them. Quick, decisive combat is what drives NeoTokvo.

Don't let the comparison put you off, though - NeoTokyo isn't just Counter-Strike with some invisibility. Set 40 years in the future, Toyko looks much the same as now. (One level takes place in a Japanese garden with traditional pagodas alongside near-future tech.)

You get three classes to choose from: the Recon has light weapons, a long-lasting cloak and the ability to zip around the map; the Assault is the jackof-all-trades; and bringing up the rear is the Support, who has no cloak but is allowed to don heavy armour.

You're not just running around aimlessly - the game's intention is to

"This mod doesn't reward you for running around, shooting randomly"

Much like in Ghost in the Shell -NeoToyko's main influence - in this future the Japan National Security Forces' Group Six (the result of crossbreeding hi-tech SAS-types and the police) are in a constant battle against terrorists (the Jinrai).

make you work as a team in an effort to capture a ghost (a half-finished robot). Once you've grabbed it there are multiple extraction points to choose from. The player in possession of the ghost can see their enemies' positions. They really need to relay these to their

teammates, as the opposing team can see you - and they will come for you.

As usual, expect to be in the midst of lots of try-hards, spouting ultra-serious nonsense as if they were actually in a combat situation. Something like: "There's an enemy Recon 800m southwest approaching the ghost." There's nothing forcing people to do that, but the quality of the mod (and a lack of other interests in life, perhaps?)

NeoToyko does make you work together with your squad, admittedly, and choose your shots carefully, as you'll be punished for wasting your cloak or going off on your own.

With proper patching to resolve some technical issues we encountered, there's no reason why this can't be a legitimate substitution for the original Counter-Strike. MF

FULL COMBAT REBALANCE

David's Witcher mod of the month

MOD FOR The Witcher WEBSITE snipurl.com/combatrebalance

THIS CLAIMS TO be the biggest mod released for The Witcher so far and, even after just a quick glance at the custom install options, you couldn't really argue. Various smaller mods have been included - included Flash's The Witcher Mod (issue 209). Other

additions include a werewolf fur quest, visible wounds, a poker mod, item stacking and some cosmetic additions. It also gives you the option of disabling the intro and logo movies.

Of course, the bulk of the package is devoted to rebalancing the combat and attempting to make it more difficult and/or tactical. Like many similar mods, how successful this is comes almost completely down to how you feel about the additions. Personally, we were accepting of the original combat system, but that doesn't mean we

wouldn't have taken something a bit more tactical in its stead.

Don't forget to back up your copy of The Witcher before installing this, as if you don't like the new combat, you'll find yourself with a buggered version of a great game. DB

COMMANDERS OF WAR II

You can never have too much authenticity

CAMPAIGN FOR Men of War WEBSITE moddb.com/mods/commanders-of-war-ii

AS IF MEN of War wasn't in-depth or hardcore enough, people have (as usual) seen fit to pilot it much further down realism road.

All sorts of new gun, vehicle and uniform models and skins have been included, so surely even the most ardent World War II fetishist should be satisfied.

The main focus is on said unit additions, but that doesn't mean that no gameplay changes have been made. More control over resource and command point allocations has been granted, though the mod makers urge players not to fight battles with over 2,500 points for frame rate and playability reasons.

Players who don't like the use of rockets in the game can opt out of using them, plus players who prefer light infantry combat can also choose to focus solely on that, with none of those nasty, mean metal buckets trundling along and ruining the man-on-man action.

As far as exhaustively comprehensive unit add-on packs go, Commanders of War II is up there with the most ridiculous. If you can tell the difference between a Jagdpanzer IV/70 (A) and a Jagdpanzer IV/70 (V) then this one is almost certainly right up your proverbial alley. We expect this mod to be improved upon in the future too, with more gameplay and fundamental design changes probably in the pipeline. DB

MOD The add-ons to avoid

FREE-FOR-AL

A change of pace this month, with our regular Team Fortress 2 slugfest being replaced by a Call of Duty 4: Modern Warfare slugfest. It was less cartoony but no less fun, and much fun was had by all. Except for the person accused of cheating. Elsewhere, the PC ZONE Twitter feed - @pczone - was unusually active, with John McEnroe being the surprise guest star. And yes, we are definitely being serious.

Tennis inspired tweets

THE MAIN TOPIC of conversation (if that's what you can call Twitter interaction) was a comp to win the less-than-awesome Virtua Tennis 2009. A number of you bothered to enter, the challenge being to draw an MS Paint version of everyone's favourite headband-sporting wooden racket maniac John McEnroe. Some of the entries were interesting, some were disturbing, and some were extremely tedious. But we loved each and every one,

because they came from you, our lovely readers. The winner was one @rclarke, whose effort (top) was clearly inspired by the works of the cubist greats like Picasso and Braque,

coupled with a rather fetching turn of internet phrase which mangled McEnroe's famous "You cannot be serious" rant into "Am not be serias!" Very witty, I'm sure you'll agree.

An honourable mention goes to @Halrick (above). FYI @Halrick, McEnroe doesn't look like a cross between a white Mr T and Will Riker out of Star Trek: The Next Generation.

FIGHT CLUB

Heeding the call of duty isn't easy

FORGIVE US, OH ZONE gamers all. for not knowing how to properly configure a Call of Duty 4: Modern Warfare server for your needs. Specifically, this meant putting it on team deathmatch and setting a round timer that allowed for more than two minutes of play. It took a little while and more than a few restarts, but we got there in the end. With pretty excellent results, we have to say.

While erstwhile deputy editor Steve Hogarty was there in spirit, he was actually represented by COD4 veteran Sam Smith, our work experience man of the month. While rusty, he definitely boosted PCZ's usual performance.

After a quick practice bout on Backlot, the real action began on the much-maligned Bloc, which produced the most intense and exciting fighting of the entire evening. To say things went to the wire would be an understatement, as one kill literally became the difference between winning and losing.

Effectively a draw, the round ended when David's fortuitous run of straight kills allowed him to spawn a helicopter

"One kill became the difference between winning and losing"

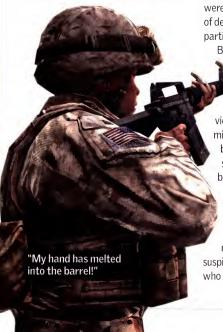

(for the first and last time in the game) which brought the solitary kill required to grant victory to his side. Huzzahs were uttered, but it was mostly a case of declaring the 'awesomeness' of that particular round.

Bog was next and it was a bitty affair. The Steve/Sam hybrid did superbly in a losing effort, with the OpFor team rightly picking up the victory with some inspired (some might say) usage of aerial bombardment and bastardshooting-through-walls-ery. After a bit of swampy action, the action switched to the more sedate street fighting of Chinatown (officially called mp_carentan, confusingly). This bout requires mention only because of the suspiciously good play of one player, who shall remain nameless (mainly

because we've forgotten what his name was). Other than that, it was a confusing mess of a round that we'll gloss over.

The players regrouped for one last attempt to break each other on Wet Work (mp_cargoship) which was a very one-sided, but surprisingly enjoyable, romp over rain-slickened metal flooring and the type of grenade spam reserved for Demomen in Team Fortress 2 fight clubs. Nevertheless, this match was a fitting ending to a night of wonder. gruesome disfigurement and severe internal haemorrhaging.

Perhaps the only real blemish on the evening - other than the suspected cheating – was the fact we forgot to take a group photo this month. After the last few attempts though, perhaps it was a blessing in disguise, as it would, undoubtedly, have been nightmarish to organise. Ah well, until next month, dear reader.

NOTES FROM THE FORUM

Is John Carmack a big old traitor for saving *Rage* is made for consoles?

BRAX: Seriously, what the hell has Carmack been taking? As has recently been demonstrated, any notion of PC gaming dying is bollocks, given the massive rise in digital distribution sales. Leaving aside this fact, he's a PC developer. He has a long history of PC games, and a massive PC following; that means even if the game is crud, he'd still get a load of sales from crazed fans who would buy his still-warm crap if they could.

Why do such once-respected developers come out with such bollocks? I mean, it's bad enough that everyone is going cross-platform and pissing in the gaming gene-pool.

DR DARK: Yeah, it's getting worse. I don't like the way things are going.

JOW00: All these turncoat developers moan about lack of sales on PC exclusive games, but have any of them

released a PC exclusive recently?

Crysis, despite only being playable on PCs that would melt your carpet, sold a million copies worldwide. The Witcher, despite being an unknown franchise by an unknown developer, sold a million copies worldwide.

ALBERTHAMMOND: Given id have just been bought out it just sounds like Carmack's having to suck on his new bosses todger.

JONNY P66: What is this nonsense? John Carmack can do no wrong for he is the sexual beast of computer games. All his words are golden and the light it shineth out of his burn. Peace be to him and all those who walk with him. Amen.

LICKYBOOMBOOM: Blimey, Jonny's a fundamentalist.

Sailboats, cocks, and tech talk Mmm, 64 slices of American cheese.

THIS MONTH'S ZONE

Chat saw Steve meekly popping his head into the bouncy castle of laughs, that cosy cocoon of altruism and love, that paragon of democracy and philosophy, that metropolis of considered and polite exchange of thoughts and ideas that is our Steam group's shared internet talk-space. In the time it took him to inhale the lung-full of air he uses to bellow an announcement his arrival, Steve was cut off by a man talking about his cock in capital letters. The discussion quickly moved on to PCs, PC specs, PC components and PC building. As if the two subjects were somehow implicitly intertwined.

Desperate for attention, Steve wackily announced that he would like to ride his empty PC case as a sort of boat or dinghy. This did the trick, and soon all talk was centred around the possibility of doing such a thing. Some form of inner lining would be required, many noted, but even the largest of PC cases couldn't support the weight of an adult

male. Ideally, one would use one or two outriggers, in the form of those teensy shuttle PCs you can get, for stability and ballast.

His obligation to contribute to the magazine's monthly chat-off met, Steve once more rescinded his presence, returning cruciform to the shadows and howling in despair. He then ate slices of cheese under his duvet while sobbing quietly.

HIS HAS NOTHING to do with the new APB MMO, which is a game about putting tattoos on people until they commit a crime. Instead, the old APB (whose graphics were developed by Walking Circles, who would go on to make the amazing Skull & Crossbones on the C64) is a simulation of a cop's average, corruption-filled day.

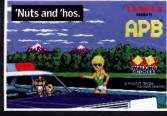

Starting at the police station, you control a squad car primed to explode at the merest suggestion of contact with another vehicle or stationary object or particularly hard bit of air. Arrest petty criminals – primarily litterbugs, who drive the pink cars - by firing your sirens at them, and if they refuse to comply, ram them off the road to their arrests and presumed deaths.

You have an incredibly short amount of time in which to do all of this, but you can increase this time by driving over donuts. I used to know how to do this, but now I can't. The donut shops leave giant donuts outside their doors, but they pull them in quickly when they see you coming. Crashing into the donut shop doesn't work either - that gets you a demerit. After 10 demerits you're fired, and these demerits accumulate throughout the game. That's 10 mistakes you're allowed to make before you're forced to start again. Like with the donut thing, there's a way to remove demerits that I don't know about.

Every now and then you'll get an APB for a particularly hard criminal. Once you've brought him into the station, you have to shake him left and right (by the traditional hammering of the left and right keys) to elicit a confession before the chief comes down the stairs. This is probably the part of APB everybody remembers, and it's

really the only bit of this game that hasn't aged horrendously.

I had a horrible time playing this, despite it being one of my most fondly remembered Atari ST games. And if anybody knows how to get the donuts, please write in.

But how? Beating up criminals

The Atari ST has been thoroughly and brilliantly emulated by STEem, to the point where you can insert blank floppies into virtual disk drives and pretend to copy made-up things to it.

The STEem website has also catalogued every bootleg automation disk ever made, and APB appears on the 136th automation disk (the intro screen is a static image of a

clown - not their best work, but it does have the Xenon music). You can get it there. We'll even give you an effing link.

steem.atari.st

How did they get the ST at the end? By pretending they're based in the Democratic Republic of São Tomé and Príncipe, of course.

Law & Odour Encounters of the judicial kind in APB

LITTERBUGS Your main crook in APB is the litterbug. They drive pink cars dropping tins out of the window.

HONKERS Taxi drivers who honk their horns must also be arrested, but they're faster than litterbugs.

DOPERS Dopers are really hippies, and drive distinctive green camper vans. If you see a camper van, arrest it.

HITCHERS Hitchers are women stranded on the roadside. Officer Bob drives over them to help them move on.

DRUNKS Drunks helpfully only ever drive orange cars, and weave down the road in a drunken sort of way.

INTERROGATION Arrest an APB and you'll have to shake the perp until you get a digitised yelp of "I confess!" Fantastic.

RED BARON vs IL-2 STURMOVIK

SO WHAT IF one is only marginally more retro than the other. Red Baron came out in 1990, while IL-2 peeped into existence in 2001, which is (God help us all) eight bloody years ago. If we're going to be pedantic we should call this section "Then & Thenner", but ignore the incongruity and just wallow in the lovely comparison.

Red Baron saw you flying World War I planes through fully 3D air, and featured a whole host of legendary pilots from the eponymous crimson nobleman to other ones you won't have heard of. IL-2 is almost exactly the same, except absolutely brilliant and incredibly detailed, with bits flying off your plane and everything.

So rigidly realistic is IL-2 that the moment in which you finally line up an enemy plane in your sights and tear a wing off is one of the most satisfying things you'll do at your PC.

Play it! Take to the skies, murder people and be called a hero

Home of the Underdogs is back! Albeit in a new, neutered guise. You can find Red Baron flitting about in the archive at homeoftheunderdogs.net. Just search for it using your brain.

You should have no trouble discovering a full download link. By now you might be questioning whether the IL-2 comparison works, as Red Baron is a World War I game.

We ran Red Baron through DOSbox by force of habit. It probably works just fine outside of the MS-DOS emulator. In fact we'll check now. Oh wow! It doesn't!

> Watch out for houses.

Alternatively, if you're one of the 14 who own a PlayStation 3, Red Baron can be had from the PlayStation Network, Though why you'd want to spend money on it is beyond us.

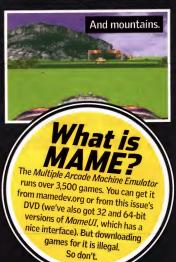

MAMEframe

INDULGE ME THIS once reader, as I present to you an absolutely awful emulation of a half-decent game.

Overdrive, in its state as a halfworking MAME ROM, is terrifying. It resembles some maddening descent into insanity. It's a vaguely playable racer, one of the Outrun class of arcade machines with a gear stick and parallaxpowered 3D-esque visuals, but as the intro rightly warns: the video emulation isn't 100% accurate.

Instead any roadside detail is flashed in front of your visor before being rendered on screen. The randomness and flickering makes Overdrive feel like Mario Kart crossed with the flight into the monolith from 2001: A Space Odyssey, and once you eventually succumb to the hypnotic effects of cows and goats accosting your retinas and crash into the glitched scenery, you get a wonderful image of a man with his head smashed through a windscreen.

The fact that the only real legible image in Overdrive is that of a man plunging his head through a pane of glass is haunting and powerful. Brilliant.

SPACE QUEST 2 By Steve Hogarty

THAT WEIRD FEELING you get in the pit of your stomach when you revisit the street you grew up on, the sense that everything's too small and a bit shit, that's the same feeling you get when you play adventure games you haven't seen since you were six.

I cried when, having rented Space Quest 2 on the Atari ST, it wouldn't copy to a floppy disk. Somebody must've broken the copy protection tab or something, and FoxCopy bombed halfway through.

Replaying it now, it's apparent that I wasn't being deprived of all that much. Sierra's old adventure games were bloody hard work, and delighted in killing you at every turn. LucasArts were the opposite: lovely, warm and caring. Once you get eaten by a giant mushroom in Space Quest, you'll see why the Lucas lot won.

UCASARTS' FIRST GAMES were called Ballblazer and Rescue on Fractalus and were released for the Atari 5200 back in 1984. Now in 2009 - after a decade of churning out consolified Star Wars titles of varying degrees of quality -LucasArts have set about reinventing themselves as a player in the PC gaming scene. And they're doing this by re-releasing the titles that every veteran PC gamer loves from their childhood. As well as Thrillville.

Gaming on the PC was a distant memory, a system that couldn't necessarily be plundered for cheap franchise dollars. And yet, suddenly, Lucas Arts have turned the tables (a little) with their first re-releases on Valve's Steam. While some might point to the fact that virtually all of the games have been put on sale in different boxes many, many times before, the general consensus seems to be that bringing these games to the attention of a new generation players is a great thing.

"Bringing these games to a new generation players is a great thing"

LucasArts can be split into two halves: on the one side, you've got the classic games, like the Monkey Island series, Day of the Tentacle, the original X-Wing, Grim Fandango and the like. In fact, it's more of a two-thirds than a half, given how many quality titles the company produced in the late '80s and early '90s. However, in recent times the company has become a vehicle for creating substandard Star Wars games aimed at the console market.

One of the best things about this is that the versions released are, where possible, the talking ones, some of which were very difficult to get hold of in the past. Certainly, this writer had never managed to get hold of the spoken word version of Fate of Atlantis before. Add to this the fact people actually seem to be genuinely excited by the releases, something that kind of flies in the face of the industry consensus that nobody buys adventures anymore and that only

games with face-melting graphics can

LucasArts' back catalogue isn't all adventures, of course, or even games that are that ancient. LEGO Indy is only a year or so old, plus there's Armed and Dangerous (the action game with the gun that fires sharks) and a trio of Star Wars games (of varying quality). Ironically, it seems to be Republic Commando that's attracting the most attention, merely because the others are so well known that users are also taking the chance to take a gander at a game that passed them by in 2005.

However, there's no getting away from the fact that, on the PC, adventure games are what made Lucas Arts so beloved (and so hated when they ditched them) as a developer. It's the likes of Day of the Tentacle, Sam & Max Hit the Road, and Full Throttle that are most eagerly awaited, although there are plenty shouting for the return of the X-Wing and TIE Fighter games as well.

The future is decidedly more rosy for LucasArts now than it was a few months ago, simply because they remembered what they were good at

LucasArts on Steam

So you've got this Steam thing and you've noticed that, maybe due to the words on this page, that there are some old LucasArts games floating about. At the time of writing, there are 11 Lucas Arts games on Steam, if you include the recently-released Secret of Monkey Island: Special Edition.

> You've got Battlefront II. Republic Commando and Starfighter representing the Star Wars side of the company; and you've got the aforementioned Secret

> > of Monkey Island, The Dig, LOOM, Indiana Jones and the Fate of Atlantis and The Last Crusade in the point-and-

click adventure corner. Bringing up the rear are

LEGO Indiana Jones and the underrated Armed and Dangerous, There's also Thrillville: Off the Rails, but nobody cares about that because it's knob.

WHAT THE FANS SA

PC ZONE readers on their love (and hate) for LucasArts' classics

Indy and the Last Crusade was great. I played it before watching the film and again after. The puzzles are complementary to the story and it evokes the swashbuckling feel of being Indy (before he got grey hair and survived nuclear explosions by hiding in fridges).

CAFF:

GAVPOWELL: Fate of Atlantis is that rare thing - a franchise used to good effect. The multiple routes through the game are a great touch (not least being able to engage in giving baddies a biff in the face), the plot hangs together nicely, dialogue is pretty believable and the puzzles are just about the right side of fiendish without being mind-breakingly impenetrable. Despite the fact I don't like the films, I never could resist an archaeology/ history-themed adventure, and it was a pleasure to replay after 10 years away. This is a game for the ages, says I. If you decide to use this in the magazine, please credit me as Frank J Ichecuchi.

GAVPOWELL:

The Dig piqued my interest all those years ago and always disappointed. The graphics are dated even compared to other games of that era, the plot is a generic scifi romp that was done better in Star Trek: Final Unity, and the script is absolutely dreadful, with wooden dialogue and shallow characters. As for Star Wars Republic Commando, it's an example of the 'New LucasArts' - take a generic game and re-skin it with Star Wars.

JOHNNYWARMONGER:

Hey, just imagine if George Lucas was in control of these re-releases. I wonder what great ideas he would bring to Fate of Atlantis? Maybe he'd improve the graphics, giving it a modern edge. without tarnishing the memory of the original. Or, maybe he could introduce a new reptilian character to give some wise-cracking and hilarious remarks. Finally, he could maybe introduce some sort of alien race at the end. Wow, that is such a great idea! Just imagine it, Indy vs Aliens - surely it couldn't fail.

G MAN_007 You can't fault a LucasArts game's build quality, Republic Commando is a solid fun shooter, though not a mold-breaker, and the team controls are simple and work, which some modern games can't manage. I'll be for a deal before buying any LucasArts game on Steam though, but I'll get any deal pack for the Indy games I've been hoping to play for years, and I hope to see other classics I missed the first time in the

next batches

JOW00:

Armed and Dangerous was poor. It had great ideas but the gameplay was shallow. That said, it nevertheless holds a place in my heart just because it had a gun that fired sharks. There ought to be more games with guns that fire sea creatures. Porpoise cannon, anyone?

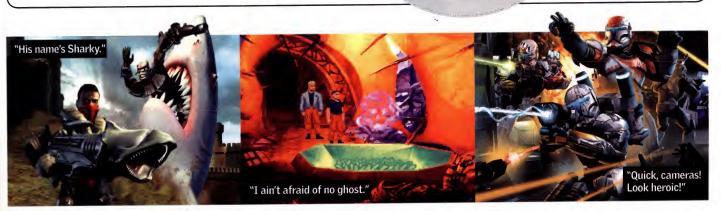

THE TINGLER:

of humour. The torture scene is top notch Python-esque comedy.

Avoid it at your peril.

For me, the best of the bunch is Armed and Dangerous, just for its twisted sense of humour. The game is vintage goodness - it still looks graphically good, and the shark gun must be one of the strangest and most effective weapons I've seen in a game. There's a small feeling of glee every time you use it. I defy anyone who loved Monkey Island not to love this and occasionally smile at the warped sense

> Battlefront II, as far as I'm aware, is the most successful Star Wars game, so that's one reason why that one's on there. Republic Commando's brilliant and I'm very glad it's on there, as I've been meaning to pick it up on PC for a while. Don't knock it as "just reskinning Star Wars on to another game," it's a great game in it's own right and I don't know another game like it.

MASS EFFECT

Mooning: **Steve Hogarty**

SAW MOON at the weekend. The weekend before that I watched Armageddon on ITV and have had Aerosmith in my head ever since. It got me thinking about really good space games, specifically those that feature the moon. It also got me thinking that "the moon" is a fairly unassuming name for something so distinctly spectacular. Why not Ultor, Endor or Mordor?

While we're at it, "Sun" is a bit bollocks, considering we've got Arcturus and Tau Ceti bobbing about a couple of light years off. We're doing our celestial bodies a disservice, and with this in mind I approached Mass Effect - a game set 176 years in the future, where the regularity with which people talk about space is such that we've started calling our planet's satellite and star

Luna and Sol as a matter of clarity. Thank Christ.

There's something I find fascinating about how Earth is represented in space games - specifically ones that don't start out on Earth. It's a sense of familiarity in an unfamiliar galaxy, a unifying reference point which, when sighted, makes the fiction of a game infinitely more personal.

Frontier: Elite II started you off in the Ross 154 system, 9.53 light years from humanity's origin. Reaching the Sol system (that's our solar system to non-future astronauts) in Elite's universe doesn't disappoint: by the turn of the 33rd century it's become

a hive of stellar activity. Earth hosts three giant orbital cities, Mars has been terraformed and is now watched over by Mars High, a floating metropolis.

Ooh, Shepard, you bitch!

Mass Effect tantalises by offering the Sol System as a destination, but only allows you to land on the moon and gaze at our planet from afar. Though disappointingly distant, it's a starkly beautiful vision, and the Codex entry referencing the irreparably damaged environment and the vast slums of the 'Texan Megapolis' is almost enough to have you voting Green. Almost.

ACE DRIVER: GRID

Smashed-up bodywork: David Brown

I PLAY RACING games with the keys, which is viewed as being some kind of mad thing to do. Well it is, but I just can't be doing with pads unless I have to put myself in someone else's shoes for purposes of review. For myself, pads can get stuffed, I'll soldier on with my trusty arrows.

Having said that, sometimes I do consider using analogue sticks for car games, for the obvious reason of being able to make graded turns, rather than binary ones. That doesn't stop me enjoying racing games as good as GRID though.

The fundamentals are just right, pretty much (and that's coming from someone who likes cars as much as he does genital fungus). Yes, it's more arcadey than some nutcases might like, but it is just damn fun! Personally, I couldn't care less if the courses didn't have accurate

advertising or pixel-perfect GPS

modelling or whatever. I just want to go vroom vroom and crash into barriers a lot. GRID definitely has the right blend of solid driving and arcade fun, with a surprisingly smooth multiplayer element too.

Oh, I also love the fact the female voiceover calls me by my name when I load the game up. If the world suddenly decided to shun me, I'd still have my GRID girl to welcome me with unrestrained good cheer.

TRIALS 2: SECOND EDITION

Reheating turkeys: **Steve Hogarty**

THE LAST TIME I played Trials 2 brought about a raft of delightful joshing about having to be surgically removed from the keyboard, or being found in a crab-like position over my desk in the morning, howling in pain.

In truth it turned me into an utter bastard, a shrieking, swearing bucket of seething profanity.

If you dared chuckle and suggest that I was "addicted", or that I needed to go to "Trials 2 Anonymous" or

Bone-crunching tumble imminent. something similarly awful, I would hate you intensely for many hours. I wouldn't attack you, that's unrealistic, but I would think how you were a shit human.

That's not

a real car!

The game's now flirting with the Xbox 360 lot, with a reworked, minigame laden re-release, so what better time (actually, what worse time) to go back and play the original. Riding a bike in Trials 2 is like riding a motorbike - you never forget how. While I struggled with the fiddly long jumps at first, the compulsive nature of the game, with its evil rapid-restart system, soon re-established its hold.

My scores still exist somewhere on Trials 2's global leaderboard, though with the game now on Steam, and tied to your Steam profile, I'm being forced to reclaim my best times.

If you want to try me on, I'm escaped_monkey on Steam. But please, try not to interrupt me.

CRYOSTASIS

It's Russian, it's full of linear gameplay, it's a bit like Condemned only with slightly less melee fun and fairly average guns, but it'll keep you hooked because it's absolutely barking mad. I'd still buy the first Condemned over this. Once you've played it, you won't ever want to touch it again. caff

DAIKATANA

Got Daikatana on Gametap. I remember it being bad, but wasn't sure if I'd got caught up in the hate campaign at the time and not given it a real chance. Whoops! It's bad. Clearly extensive traumatic amnesia had taken place that hid the depths of badness I suffered the first time around. f0rq3

ARMAII

This Q&A cost Steve Hogarty an ArmA and a leg

HE UNOFFICIAL SEQUEL to Operation
Flashpoint is many things to many people, a
consummate PC title and exactly the sort of
thing that wouldn't fly on console. Complex, complicated,
daunting and with a few too many quirky glitches for
most, it's the most dynamic and unpredictable battlefield
simulator you can find.

In a less adjective-y sense, playing *ArmA II* is bloody hard work. Like owning an old Volvo and being the only person who knows how to stop it from stalling and

"Whenever we found some tricky stuff, like we weren't sure about some USMC unit organisation, or about military symbolism, or about radio conventions, we asked particular questions. We are

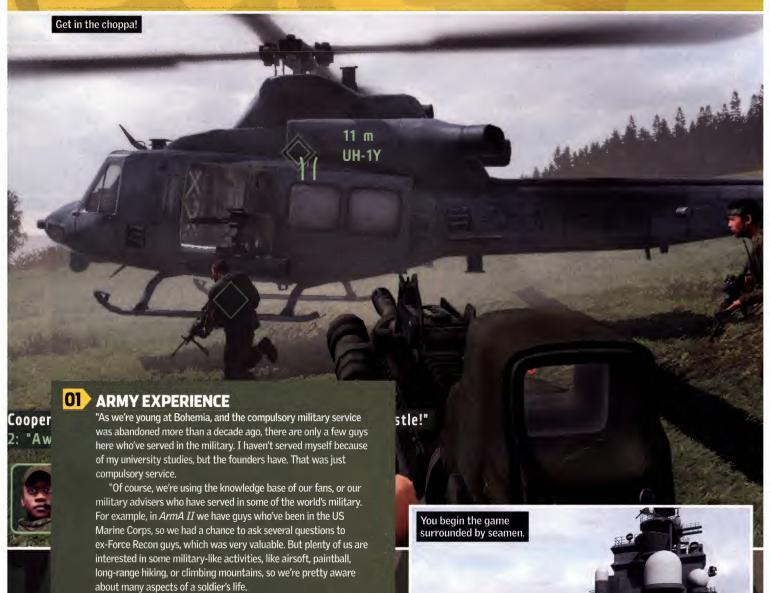

basically in constant touch."

108 PEZUNE pozone.cu sk

catching fire when turning right. Oh, we hate you and love you in equal measures, *ArmA II* – it's a shame the number "70" doesn't convey the depth of our emotional turmoil, but that's one of the many fallacies of our scoring system. Another big one is that everything's "subjective", and that there are people in the world with more patience for cracked gems like *ArmA II* than most. Weeeeird people.

Anyway, we found Ivan Buchta on the end of a phone and asked him all about the game he did.

02 PLAY SOLDIER

"We're really interested in airsoft, as it gives you deeper insight into the non-combat routines of the soldier in the field. However it's just recreation, we do it for fun, so we don't really push it to the limits that soldiers are used to, but it changes your perspective. You don't think anymore that you are some invincible hero, you really appreciate that teamwork is the key to success, and that while you're only very small you are also a very important part of the bigger picture.

"Airsoft is a good experience which has helped us, but we don't give too much attention to any sport like this in regards to design, as it's just a game, so we also try to consult some people with real military experience, field manuals, and books written by soldiers."

Cooper (Cooper): "Miles, I got the target lased, tell Battlemage!"
RZZOT: "Battlemage, this is RZZOT target marked."

"It was a gas leak, honest."

03 IS IT LIVE?

"We don't call what we're aiming for 'realism', we prefer authenticity', because during our research we've found that the many realistic procedures are really complicated, and would be very boring for the player.

"So the mission architecture for several military features are designed in a way to please the player, not to bore him. For example, with artillery, in real life, there's a very complex way of ordering an air strike, whereas in the game you have a point-and-click interface with some additional authentic-sounding radio, and that's it. So we're definitely more inclined to find a fun solution over a realistic solution."

"We don't call what we're aiming for 'realism', we prefer 'authenticity'"

04 HARDWARE HANDS-ON

"Do we ever fire real weapons? Well, I had a chance to fire some hunting weapons and I even fired some blind rounds from some assault rifles, from the Czech assault rifle and light machine gun, and I think lots of other guys also had the opportunity, but we're not experienced shooters, I think nobody in the development team actually owns his own weapon.

"People always think that we're military fans and that we're crazy about it, and when they actually read or hear our opinions regarding this it's sometimes pretty confusing for them as we're all basically antiwar. But from my point of view, the army is an organisation which has its role, its purpose, it's very useful and sometimes you just have to apply that power. So I'm definitely not a pacifist, but of course I can't speak for the rest of the team."

LOOKINGBACKCOMMENTARY

05 MOTION CAPTURE

"When we did the cinematic scenes, those were acted by the guys from the design team, including myself. We also had to re-record many common movements, like running with weapons and sprinting, which was particularly interesting, as we realised the environment was really huge, and if we let the player move at the realistic speed, which in full gear can be something like 15km/h, it would be too slow. Our sprint was something like 21km/h, a really fast movement which you can't endure for long in real life, but we did this for the gameplay.

"This meant our actor had to sprint really fast during motioncapture, and we were able to record just four of his steps in the area that was scanned by the camera, so there was some fine tuning involved. But we recorded all sorts of moves, from forced entries to animations like healing wounded or being wounded, which was great, and plenty of generic stuff you'll see all the time."

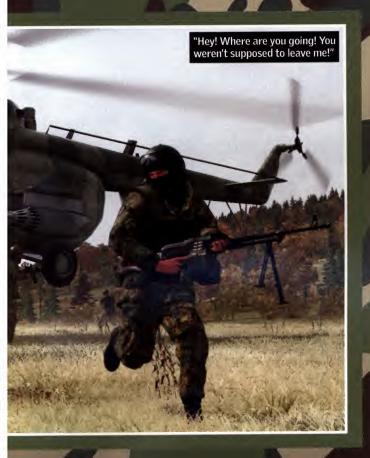

06) RESEARCH AND DESTROY

"We do a lot of research, and we also use our community as a good source of information. Some people who fly military aircraft also play our games, and fortunately we sometimes have a chance to find a person who can share some experience. But we're mostly using the internet and other publicly available resources, and it's usually enough to make

a decent representation of vehicles in the game. Of course, the accuracy isn't always 100%, but I think we're able to get a reasonable depiction of any particular aircraft or vehicle in the game.

The internet is a great source of information when you know where to look. In some cases we have to buy some books, we even use some

modelling books, for people who are making plastic kits. As these guys are usually mad about details it's a very useful resource from which you can get everything, from the accurate size of the vehicle to the camouflage or markings. That's usually where we will go for information when we're out of available research or cannot find anything else."

07 SOUNDS GREAT

"We have a small team of programmers and sound teams here who design things together, and we did some research on what really happens on the battlefield. You mentioned the supersonic crack, which is a distinct feature that, once you got into a real shoot-out, you'd hear frequently. It's a sound generated by the bullets passing at the speed of sound. There are plenty of things like that, like the fact that weapons sound different when you hear them from a distance than when you hear them from close range, and depending on whether you are behind the muzzle or in front of it.

"These sounds are all caused by physics – basically all the sounds are pressure waves travelling through environments. Of course we're not simulating the pressure waves, but we can define some events the player meets, and simulate or fake them. This way for example, if you hear an explosion in the distance, you hear the bass sounds, which travel

08 ANIMAL CHALLENGES

"The challenges in the armoury being extended to animals was a side effect of our game being too big to be fully controllable by our team. Normally we'd limit the use of animals somehow. Maybe there'll be a time where we add some animalspecific challenges, but I can't see it happening right now. We didn't want to deny people the possibility to play as a dog or something. It's just a small thing, it's not breaking the game, it's just some extra fun you can have, but we're definitely not focusing on that aspect, it's just a minor thing.

"It was left there, forgotten maybe, and someone obviously forgot to limit the use of animals in the armoury challenges. It's all about time, maybe one day we will see something more to do with animals. But for the moment, there are other things such as defensive fields or AI strategic behaviour, which are far more interesting to both us and the players."
